Every medical specialty has as its basis a core of classic papers which both reflects the historical background and gives insight into its present and future developments. The selected papers in this volume highlight landmarks in the development of critical care medicine. Internationally acclaimed experts have chosen what they consider to be the most important papers in their respective subspecialties. Each entry follows a set format, starting with the abstract and the reference to the original source of publication. This is followed by analysis of the strengths and weaknesses of the paper and the contribution it has made to the development of critical care. Additional information including citation score of each paper is given together with detailed analysis of the top 500 most widely cited papers.

Thinking About Children collects thirty-one papers, of which twenty-eight have never previously been published. As might be expected, they range widely in tone and content from concise clinical observations to more general meditations including the landmark paper "Towards an objective study of human nature". Of particular interest are sections on autism and psychosomatics, where the author's thinking can be seen to foreshadow more recent developments, such as Frances Tustin's work on autism. Together with a substantial introduction by the editors, this book is indispensable for those acquainted with the author's work, and an ideal introduction for those who have not yet encountered the extraordinary clarity and depth of his thought.

Because principles of nursing process are the building blocks for all care models, the nursing process is the first model nurses need to learn to "think like a nurse." This trusted resource provides the practical guidance needed to understand and apply each phase of the nursing process, with an increased emphasis on developing both critical thinking and clinical reasoning skills. With an easy-to-follow and engaging writing style, the author provides strategies, tools, and abundant examples to help nurses develop the skills they need to thrive in today's complex health care setting.

Principles and Practice of Psychiatric Nursing, 8th Edition provides comprehensive coverage of psychiatric nursing. Beginning with fundamental coverage of all key psychiatric nursing principles, it goes on to address the complete continuum of care - including mental health promotion and illness prevention, crisis intervention, and psychiatric rehabilitation and recovery. The book then applies psychiatric nursing principles to specific clinical disorders based on adaptive-maladaptive coping responses, the six-step nursing process, and DSM-IV-TR and NANDA diagnoses. Subsequent chapters describe various modalities of treatment (psychopharmacology, somatic therapies, cognitive and behavioral therapies, managing aggressive behavior, and more), hospital-based and community-based care, and treatment of special populations. The Stuart Stress Adaptation Model provides a consistent

nursing-oriented framework for understanding health and wellness. Evidence-based algorithms are presented in lieu of the less relevant critical pathways found in other texts. The latest American Nurses Association's Standards of Care prepare students for the realities of evidenced-based care in nursing practice. A vibrant, full-color design enhances and enriches students' understanding of essential concepts. Short vignettes in a patient's and family's own words give readers a different perspective of the caregiving process. Case studies present in-depth clinical scenarios that show each step of the nursing process, demonstrating realistic applications of the nursing process. Critical thinking questions interspersed throughout the text encourage independent clinical reasoning. Numerous boxes and tables throughout the book highlight important issues and current topics related to chapter content in visual, easy-to-digest segments. Citing the Evidence boxes provide summaries of recent clinical research, with new boxes added to the Evolve website each month. Nursing Treatment Plan Summaries present care plans, including patient goals with nursing interventions and rationales, to guide nursing care related to the treatment of major disorders. Patient Education Plans and Family Education Plans include key information nurses need to communicate to the patient and family members. Sample Therapeutic Dialogues for nurse-patient interactions demonstrate the difference between therapeutic and nontherapeutic communication. Clinical chapters have been carefully revised and updated to include the latest research and appropriate nursing and medical diagnoses relevant to each disorder. A strengthened family focus and more in-depth discussion of outpatient care reflect current trends in psychiatric nursing. NIC and NOC are introduced in the nursing process chapter (chapter 12) and incorporated as appropriate into disorders chapters. Chapter Focus Points at the end of each chapter provide a comprehensive review of important information. Key terms are defined in the glossary and listed with page references at the end of the chapter in which they appear. A comprehensive list of behavioral rating scales is offered as an appendix for easy reference. A companion CD-ROM offers animations, interactive exercises, review questions for the NCLEX examination, and an audio glossary for additional study and review.
