As we move deeper into the 21st century, firms continue to struggle with the implementation of sales force technology tools and the role they play in sales representative performance. Foreseeing a changing environment, many sales organizations have begun to focus on technology-related strategies, business processes, and applications to adapt to these emerging issues. With this in mind, sales force technology usage has changed the methods of selling. Salespeople are no longer selling just a “product”; instead, they are providing a valuable “solution” to customer problems. Salespeople now act as consultants or experts and provide customized solutions. This role requires salespeople to develop a technological orientation to access, analyze, and communicate information in order to establish a strong relationship with customers.

Sales technology enables salespeople to answer the queries of customers and effectively provide competent solutions. The ability to answer queries and provide solutions leads to strong relationships between a salesperson and a customer. Thus, technology tools are not only used for smoothing the work process, but also have strategic utilizations. With the adoption of technological tools at exponential rates, many firms fell into pitfalls and witnessed failure of their technology initiatives. The purpose of this book is to outline the important steps that must be considered and adhered to when implementing sales force technology. Perhaps the most important aspect covered within this book is that technology usage is both a strategy and a tool; therefore, we outline both strategic considerations as well as implementation procedures throughout each chapter. It is important to consider all the steps and the necessary actions that will need to take place before the first penny is spent; then and only then will the technology have its intended effect.

In CRM, Jeffrey Peel defines Customer Relationship Management in a radical new way by putting communications at the center. In the past, CRM was mostly about the technology, not about the customer. In this book, Peel talks about a new ethos that is beginning to fundamentally change the way organizations do business. At a technology level, CRM is increasingly about combining best-of-breed applications delivered via portal technologies. At a business level, it is beginning to invade traditional territories occupied by brand management or customer support. Peel shows companies how to make the shift to the new paradigm. Defines the nature of new CRM niche solutions. Provides entirely new types of functionality that mesh seamlessly. Describes solutions focused solely on the needs of the customer.

In this era of customer sovereignty, the key to success is to be customer-centric to the core and divert optimum resources towards identifying the right customers and catering to their service needs so as to leverage the relationship with a long-term perspective. In the fierce marketplace, the prime factor that will prove to be a sustainable differentiator is customer loyalty. Marketers must connect with the customers — inform, engage, and energizing them in the process to capture the customers and win over the competition. This book will give an insight into such aspects of CRM and help an organization to develop an apt strategy and build an infrastructure that absolutely must be in place before they can begin to understand the customers and start delivering effective loyalty programs. It emphasizes on the fact that the loyalty is built on trust which results from the total experience that a customer has with your organization throughout the customer lifecycle. This book will primarily cater to the management students who are aspiring marketers keen to explore the world of endless opportunities of Marketing & Brand Management. It will provide them with an insight into the core concepts of CRM and equip them to successfully mark their corporate debut. This book also intends to cater to the corporate professionals who are planning to invest in a Customer Relationship Management program. I hope that we will be able to build a relationship through my investment in writing this book and your investment in reading it. Since a relationship is two-way, I hope that we can benefit from each other’s experiences. I would be glad to hear from you, please do share your experience and feedback at pallavikapooria@gmail.com

No-one who has read this highly readable and significant book would ever make that expensive mistake." Sir Martin Sorrell, Chief Executive WPP GROUP PLC "A wise and thoughtful book by an author who understands to the core that customer relationship management is about human connections.” Leonard L. Berry Distinguished Professor of Marketing, Texas A&M University, and author ofDiscovering the Soul of Service Dr. Jay Liebowitz Orkand Endowed Chair in Management and Technology University of Maryland University College Graduate School of Management & Technology 3501 University Boulevard East Adelphi, Maryland 20783-8030 USA jliebowitz@umuc. edu When I first heard the general topic of this book, Marketing Intelligent Systems or what I'll refer to as Marketing Intelligence, it sounded quite intriguing. Certainly, the marketing field is laden with numeric and symbolic data, ripe for various types of mining—data, text, multimedia, and web mining. It's an open laboratory for applying numerous forms of intelligentsia—neural networks, data mining, expert systems, intelligent agents, genetic algorithms, support vector machines, hidden Markov models, fuzzy logic, hybrid intelligent systems, and other techniques. I always felt that the marketing and finance domains are wonderful application areas for intelligent systems, and this book demonstrates the synergy between marketing and intelligent systems, especially soft computing. Interactive advertising is a complementary field to marketing where intelligent systems can play a role. I had the pleasure of working on a summer faculty f- lowship with R/GA in New York City—they have been ranked as the top inter- tive advertising agency worldwide. I quickly learned that interactive advertising also takes advantage of data visualization and intelligent systems technologies to help inform the Chief Marketing Officer of various companies. Having improved ways to present information for strategic decision making through use of these technologies is a great benefit. Customer Relationship Management is the first book to explore the benefits to the firm of a globally integrated approach to the management philosophy of Customer Relationship Management (CRM). The best hope for achieving a sustainable competitive advantage in a global marketplace is by means of better understanding which customers are in the best position to experience long-term, profitable relationships for the globally oriented firm. This book offers both an academic and a practical viewpoint of the importance of CRM in a global framework. It integrates the topics of knowledge management, total quality management, and relationship marketing with the goal of explaining the benefits of CRM for internationally active firms. The authors have included six case studies which allow the reader to undertake the role of CRM consultant in a 'learning by doing' approach. The book should be required reading for all business executives who desire a customer-oriented approach to success, and for all students of business who desire to gain insight into a relationship management approach which will become ever-more important in the years ahead.

Customer relationship management (CRM) is one of the hot topics in marketing and information systems today. Customer relationship management is a business strategy that provides the enterprise with a complete, dependable, and integrated view of its customer base. A CRM system brings together lots of pieces of information about customers, sales, market trends, marketing effectiveness and responsiveness. CRM helps companies improve the profitability of their interactions with customers while at the same time making those interactions appear friendlier through individualization. CRM's purpose is to enhance customer satisfaction and retention by alignment of customer business processes with technology integration. As the Internet and digital technology change the ways business is conducted, the academic disciplines of information technology and marketing are merging. As a result, experiments with new and modified courses are being taught at many innovative universities at the forefront of this change.

Based on their combined experience of over half a century of advising companies, the authors argue that marketing has lost its way. Companies cannot win in today's highly competitive markets by leaving marketing up to the marketing department. Success in the new marketplace demands integration of the firm's entire set of capabilities into a seamless system that delivers exemplary customer satisfaction, if not delight. Integrating marketing is imperative, from the top down, and with every major function: finance, operations, sales, R&D, customer service and HR. Only by creating "Total Integrated Marketing", ensuring that everyone in the organization has one paramount goal to get and keep customers can success be achieved. The authors provide a wealth of marketing tips and innovations that readers can easily adopt to their own businesses and revealing cases that lift the lid on good and bad practice around the world.

The research questions are broken into a number of purposes. Generally, the study's principal purpose is to ensure the successful CRM adoption into firms. Therefore, it is necessary to consider carefully from the very first step, formulating a CRM strategy. According to the consulting point of view, constraints are significant factors in creating a strategy. It is said that the study is expected to help firms identify the core constraints, understand and analyze them thoroughly. The next step is to categorize these findings into groups which make them clarified and reusable. Afterwards, the discovered classification will establish a grounded foundation for analyzing real-life CRM projects. The practical information is collected for two main reasons. First, it is used to prove the theoretical breakthroughs. Second, the analyzed result itself will contribute to the success of studied CRM projects. This is not only a confirmation for literature but also a practical contribution.

Based on decades of collective research, teaching, and application in the field, the authors present the most comprehensive treatment to date of database marketing, integrating theory and practice. Presenting rigorous models, methodologies, and techniques (including data collection, field testing, and predictive modeling), and illustrating them through dozens of examples, the authors cover the full spectrum of principles and topics related to database marketing. "This is an excellent in-depth overview of both well-known and very recent topics in customer management models. It is an absolute must for marketers who want to enrich their knowledge on customer analytics." (Peter C. Verhoef, Professor of Marketing, Faculty of Economics and Business, University of Groningen) "A marvelous combination of relevance and sophisticated yet understandable analytical material. It should be a standard reference in the area for many years." (Don Lehmann, George E. Warren Professor of Business, Columbia Business School) "The title tells a lot about the book's approach—though the cover reads, "database," the content is mostly about customers and that's where the real-world action is. Most enjoyable is the comprehensive story – in case after case – which clearly explains what the analysis and concepts really mean. This is an essential read for those interested in database marketing, customer relationship management and customer optimization." (Richard Hochhauser, President and CEO, Harte-Hanks, Inc.) "In this tour de force of careful scholarship, the authors canvass the ever expanding literature on database marketing.
