Voted America's Best-Loved Novel in PBS's The Great American Read Harper Lee's Pulitzer Prize-winning masterwork of honor and injustice in the deep South—and the heroism of one man in the face of blind and violent hatred One of the most cherished stories of all time, *To Kill a Mockingbird* has been translated into more than forty languages, sold more than forty million copies worldwide, served as the basis for an enormously popular motion picture, and was voted one of the best novels of the twentieth century by librarians across the country. A gripping, heart-wrenching, and wholly remarkable tale of coming-of-age in a South poisoned by virulent prejudice, it views a world of great beauty and savage inequities through the eyes of a young girl, as her father—a crusading local lawyer—risks everything to defend a black man unjustly accused of a terrible crime.

*Walking in Footsteps of Promise* is the unadorned account of my evolution as a human being in my quest to find a place in this world. My journey has without a doubt been an arduous one, with many ups and downs, but through it all I have preserved and remained resolute in my determination to succeed against all odds. Looking back on my life I have realized that my quest for a higher purpose and burning desire to seek meaning in life is actually a recurring theme that in many ways has always unconsciously been there. All along I have been walking in these footsteps of promise, unwittingly following the path paved by my ancestors long ago. I sincerely hope that through my story you will gain renewed inspiration for the pursuit of your dreams. At the very least I wish that *Walking in Footsteps of Promise* will remind you that you are not alone in experiencing failure and hardship; and that the triumph of the human spirit over adversity is an old tale which must be constantly rewritten.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
