Rapid Chemical and Biological Techniques for Water Monitoring presents in one volume the broad spectrum of monitoring tools, both available and under development, and provides an assessment of their potential for underpinning environmental management and legislation. The book explores screening methods in the context of water policies; chemical methods; biological methods; potential use of screening methods; quality assurance and validation methods; integration of screening methods in water monitoring strategies. The text provides a timely source of information for post-graduates, researchers, and professionals involved in water management at all levels.

Fuels, Lubricants, Coolants, and Filters easily helps a reader to understand these wonderful liquids and filters better. By starting with the basics, it builds your knowledge step-by-step in a very structured manner.

Explore: Stories of Survival From Off The Map offers first-hand accounts from the world's boldest explorers. These men and women are the genuine article - encountering storms, starvation, cannibals, predators and disease in their pursuit of mystery and adventure. Their stories are immediate, passionate and dramatic accounts of contact with the unknown, set in the mountains of Africa and the Himalaya, the jungles of New Guinea and the Amazon; the ice flows of the Arctic and the canyon lands of the American South West. Explore includes selections from contemporary masters such as David Roberts, Tim Cahill, and Redmond O'Hanlon, as well as earlier explorers like A. N. Cabeza de Vaca and Fridtjof Nansen. Edward Marriott and his party sneak into the pre-dawn New Guinea jungle to escape the wrath of the notoriously dangerous Liawep warriors. Like all Adrenaline titles, Explore features only the best writing on its subject - the most thrilling and compelling accounts ever written of exploration in all its forms. The stories will take you off the map, to those surviving refuges where true discovery is still possible.

Written by the Shale Shaker Committee of the American Society of Mechanical Engineers, originally of the American Association of Drilling Engineers, the authors of this book are some of the most well-respected names in the world for drilling. The first edition, Shale Shakers and Drilling Fluid Systems, was only on shale shakers, a very important piece of machinery on a drilling rig that removes drill cuttings. The original book has been much expanded to include many other aspects of drilling solids control, including chapters on drilling fluids, cut-point curves, mud cleaners, and many other pieces of equipment that were not covered in the original book. Written by a team of more than 20 of the world's foremost drilling experts, from such companies as Shell, Conoco, Amoco, and BP There has never been a book that pulls together such a vast array of materials and depth of topic coverage in the area of drilling fluids. Covers quickly changing technology that updates the drilling engineer on all of the latest equipment, fluids, and techniques

With more than forty years of experience butchering domestic animals, game, and birds, award-winning outdoor writer and photographer Monte Burch presents this complete guide for butchering many types of livestock or wild animals. Learn how to butcher cows, chickens, goats, hogs, deer, turkeys, rabbits, and more, with simple and easy-to-follow, step-by-step photographs and illustrations. Burch also provides recommendations on which tools (knives, paring knives, meat scissors, meat grinders, shrink-wrappers) to use for the task at hand. He lists detailed instructions on how to butcher each animal and use each part, so nothing goes to waste. Now you'll be able to prepare meat for salting and curing, freezing, sausage making, and more. From field dressing, skinning, and boning out a whole deer to efficiently plucking ducks and bleeding out hogs, this is the one-stop guide to help you become more self-sufficient in preparing your meat for your table. Skyhorse Publishing is proud to publish a broad range of books for hunters and firearms enthusiasts. We publish books about shotguns, rifles,

handguns, target shooting, gun collecting, self-defense, archery, ammunition, knives, gunsmithing, gun repair, and wilderness survival. We publish books on deer hunting, big game hunting, small game hunting, wing shooting, turkey hunting, deer stands, duck blinds, bowhunting, wing shooting, hunting dogs, and more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to publishing books on subjects that are sometimes overlooked by other publishers and to authors whose work might not otherwise find a home.

This carefully written textbook offers a thorough introduction to abstract algebra, covering the fundamentals of groups, rings and fields. The first two chapters present preliminary topics such as properties of the integers and equivalence relations. The author then explores the first major algebraic structure, the group, progressing as far as the Sylow theorems and the classification of finite abelian groups. An introduction to ring theory follows, leading to a discussion of fields and polynomials that includes sections on splitting fields and the construction of finite fields. The final part contains applications to public key cryptography as well as classical straightedge and compass constructions. Explaining key topics at a gentle pace, this book is aimed at undergraduate students. It assumes no prior knowledge of the subject and contains over 500 exercises, half of which have detailed solutions provided.

By reducing mathematical detail and focusing on real-world applications, this book provides engineers with an easy-to-understand overview of stochastic modeling. An entire chapter is included on how to set up the problem, and then another complete chapter presents examples of applications before doing any math. A previously unpublished computational method for solving equations related to Markov processes is added. The book shows how to add costs or revenues to the basic probability structures without much additional effort. In addition, numerous examples are included that show how the theory can be used. Engineers will also find explanations on how to formulate word problems into the models that the math worked on.

This book argues that there is a new, Sinological form of orientalism at work in the world. It has shifted from a logic of 'essential difference' to one of 'sameness' or general equivalence. "China" is now in a halting but inevitable process of becoming-the-same as the USA and the West. Orientalism is now closer to the cultural logic of capitalism, even as it shows the afterlives of colonial discourse. This shift reflects our era of increasing globalization; the migration of orientalism to area studies and the pax Americana; the liberal triumph at the "end" of history and the demonization of Maoism; an ever closer Sino-West relationship; and the overlapping of anti-communist and colonial discourses. To make the case for this re-constitution of orientalism, this work offers an inter-disciplinary analysis of the China field broadly defined. Vukovich takes on specialist work on the politics, governance, and history of the Mao and reform eras, from the Great Leap Forward to Tiananmen, 1989; the Western study of Chinese film; recent work in critical theory which turns on 'the China-reference'; and other global texts about or from China. Through extensive analysis, the production of Sinological knowledge is shown to be of a piece with Western global intellectual political culture. This work will be of great interest to scholars of Asian, postcolonial and cultural studies.

"Edge is a core reading/language arts program designed for striving readers and English language learners in grades 9-12 reading below grade level. It prepares students for success on exit exams and moves them on to graduation and a promising future."--From publisher.

Being an effective communicator in English is a sign of intelligence and productivity. It is highly valuable in competitive environments where you come across a lot of brilliant people. In this book, you will learn all the phrases to be an effective team player in meetings.

WHAT THEY DIDN'T TEACH YOU IN BUSINESS SCHOOL - AND WHAT YOU NEED TO KNOW. Powerful corporate interests use their lobbyists to wield influence. They impact our daily lives, but who are they and how do they

operate? In this tell-it-like-it-is casual narrative, the reader gets an inside look at the life of a corporate lobbyist from someone who lived it. The book takes you from fundraisers, to the halls of Congress, to the White House and on to China, South Africa and Mexico with a stop at ground zero just days after 9/11. Raisin Bran and Other Cereal Wars provides unique insights into the widely misunderstood role of corporate government relations and how it affects public policy. It is the go-to source for anyone interested in learning more about the complex and stimulating confluence of business, law, lobbying and politics.

A newly updated and expanded edition that combines theory and applications of turbomachinery while covering several different types of turbomachinery In mechanical engineering, turbomachinery describes machines that transfer energy between a rotor and a fluid, including turbines, compressors, and pumps. Aiming for a unified treatment of the subject matter, with consistent notation and concepts, this new edition of a highly popular book provides all new information on turbomachinery, and includes 50% more exercises than the previous edition. It allows readers to easily move from a study of the most successful textbooks on thermodynamics and fluid dynamics to the subject of turbomachinery. The book also builds concepts systematically as progress is made through each chapter so that the user can progress at their own pace. Principles of Turbomachinery, 2nd Edition provides comprehensive coverage of everything readers need to know, including chapters on: thermodynamics, compressible flow, and principles of turbomachinery analysis. The book also looks at steam turbines, axial turbines, axial compressors, centrifugal compressors and pumps, radial inflow turbines, hydraulic turbines, hydraulic transmission of power, and wind turbines. New chapters on droplet laden flows of steam and oblique shocks help make this an incredibly current and well-rounded resource for students and practicing engineers. Includes 50% more exercises than the previous edition Uses MATLAB or GNU/OCTAVE for all the examples and exercises for which computer calculations are needed, including those for steam Allows for a smooth transition from the study of thermodynamics, fluid dynamics, and heat transfer to the subject of turbomachinery for students and professionals Organizes content so that more difficult material is left to the later sections of each chapter, allowing

instructors to customize and tailor their courses for their students Principles of Turbomachinery is an excellent book for students and professionals in mechanical, chemical, and aeronautical engineering.

Whether repairing existing components, fabricating new ones, building a race car, or restoring a classic, this is the one book to guide the reader through each critical stage.

First published in 1873, The Romance of Lust is the story of Charlie, an incredibly well-endowed man with insatiable appetites, who openly describes his sexual life, including his relationships with his sisters, his governesses, and his male and female friends. A highly controversial book that was not published in the US for nearly 100 years after its first appearance, The Romance of Lust confronts many taboos and fetishes.

Since the International Labour Organisation's Maritime Labour Convention, 2006 (MLC) came into force internationally on 20 August 2013, it has already been amended, and a further two sets of amendments have been agreed and are expected to come into force in 2019 and 2020. Maritime Labour Convention, 2006 – UK and REG Implementation sets out in detail how the UK, Bermuda, Cayman Islands, Gibraltar and the Isle of Man (being the members of the Red Ensign Group (REG) which are subject to the MLC) have implemented the Convention. Specific references are given to the laws, merchant shipping notices and guidance, as well as identifying the areas where implementation is permitted by way of collective agreements. As the MLC sits in the context of the wider international regulatory regime, it expressly endorses the application of other international instruments and standards, particularly those of the International Maritime Organisation. Furthermore, many of the MLC's mandatory provisions have been incorporated into EU Directives, which are relevant to the UK and Gibraltar. These international and regional provisions are also referenced. Chapter 1 sets out an introduction to the ILO and the MLC. Chapter 2 describes the general approach of how the UK applies its legislation to UK ships and, while they are in UK waters, non-UK ships without MLC documentation, and non-UK ships with MLC documentation. Chapters 3-22 describe the UK provisions in more detail as the other REG members' laws are influenced by those to a significant extent. The specific provisions for Bermuda, the Cayman Islands, Gibraltar and the Isle of Man have been set out, with detailed references to the appropriate regulatory sources in Chapters 23-26. Due to the central role of the MLC's Title 5 on compliance and enforcement, this is set out in full (in Part VIII, Appendix 1), annotated with references to the relevant sections of the ILO's guidelines on flag state control and port state control. The full text of the amendments to the MLC have been set out in Part VIII, Appendix 2.

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

Ralls' Introduction to Materials Science and Engineering is intended for students who want to learn about the nature of solid substances and, especially, for beginning engineering students who are making their first serious contact with the structure and properties of real solids. It represents, clearly and logically, the chemical and physical principles on which the properties of materials depend. The basic relationships introduced in general chemistry and physics courses are reviewed and extended in order to permit the student to relate the properties of ceramic, metallic, and polymeric solids to their internal structure and external environment. Nothing beats the companionable crackle of an open fire. Fires invite us to sit and share stories or watch in contemplative silence. We feel drawn to the flickering flames, the gentle
