This book joins and integrates ceramics and ceramic-based materials in various sectors of technology. A major imperative is to extract scientific information on joining and integration response of real, as well as model, material systems currently in a developmental stage. This book envisions integration in its broadest sense as a fundamental enabling technology at multiple length scales that span the macro, millimeter, micrometer and nanometer ranges. Consequently, the book addresses integration issues in such diverse areas as space power and propulsion, thermoelectric power generation, solar energy, micro-electro-mechanical systems (MEMS), solid oxide fuel cells (SOFC), multi-chip modules, prosthetic devices, and implanted biosensors and stimulators. The engineering challenge of designing and manufacturing complex structural, functional, and smart components and devices for the above applications from smaller, geometrically simpler units requires innovative development of new integration technology and skillful adaptation of existing technology.

In addition, new review questions, problem sets, and cases have been added throughout the book so that readers have multiple opportunities to test their understanding and develop real and useful design skills.

This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not.

They discuss what was learned over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research. Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI Research

The Project Accounting module within Dynamics AX is a great module for anyone that is trying to track time and costs against projects within the organization. It is especially useful because it is fully integrated with all of the other foundation areas of the product like Payables, Receivables, Inventory, the General Ledger and much more so that as you track costs within them they are automatically applied to the project and as you create transactions within Project Accounting, then they are automatically updated within the foundation modules. When you add in all of the additional functions that are available within the module like collaboration workspaces, worker assignment and scheduling, integration with MS Project and also Timesheets & Travel and Expense entry through portals, then this is definitely a module that you need to get to know. In this book we will look at all of the core features within the Project Management and Accounting module of Dynamics AX and show you how to set up and manage simple projects without even breaking a sweat.

The global spread of plant species by humans is both a fascinating large scale experiment and, in many cases, a major perturbation to native plant communities. Many of the most destructive weeds today have been intentionally introduced to new environments where they have had unexpected and detrimental impacts. This 2003 book considers the problem of invasive introduced plants from historical, ecological and sociological perspectives. We consider such questions as 'What makes a community invasible?', 'What makes a plant an invader?' and 'Can we restore plant communities after invasion?' Written with advanced students and land managers in mind, this book contains practical explanations, case studies and an introduction to basic techniques for evaluating the impacts of invasive plants. An underlying theme is that experimental and quantitative evaluation of potential problems is necessary, and solutions must consider the evolutionary and ecological constraints acting on species interactions in newly invaded communities.

Is violence on the streets caused by violence in video games? Does cyber-bullying lead to an increase in suicide rates? Are teens promiscuous because of Teen Mom? As Karen Sternheimer clearly demonstrates, popular culture is an easy scapegoat for many of society's problems, but it is almost always the wrong answer. Now in its second edition, Connecting Social Problems and Popular Culture goes beyond the news-grabbing headlines claiming that popular culture is public enemy number one to consider what really causes the social problems we are most concerned about. The sobering fact is that a "media made them do it" explanation fails to illuminate the roots of social problems like poverty, violence, and environmental degradation. Sternheimer's analysis deftly illustrates how welfare "reform," a two-tiered health care system, and other difficult systemic issues have far more to do with our contemporary social problems than Grand Theft Auto or Facebook. The fully-revised new edition features recent moral panics (think sexting and cyberbullying) and an entirely new chapter exploring social media. Expanded discussion of how we understand society's problems as social constructions without disregarding empirical evidence, as well as the cultural and structural issues underlying those ills, allows students to stretch their sociological imaginations.

The second edition of this essential handbook provides a practical, accessible guide to all emergency situations encountered in paediatrics and neonatology, from the immediately life-threatening to the smaller but urgent problems that may arise.

The purpose of this workshop was to identify performance needs and establish research priorities to address the thermal characteristics of respiratory equipment used by emergency first responders. The workshop provided a forum for representatives from the first responder community, self contained breathing apparatus (SCBA) and component manufacturers, and research and testing experts to discuss issues, technologies, and research associated with SCBA high temperature performance. The goals of the workshop were defined in two parts: 1) Clarify baseline information, including the current state-of-the-art, applicable fire service events, and current related research, and 2) Research planning, including identification of performance needs and short and long term research priorities. Presentations were given to explain the current SCBA and certification process, understand experience from actual fire service incidents, and review the current state of respirator research. After the presentations, the workshop divided into three working group sessions to discuss performance needs and research priorities in smaller groups. Suggested topics for discussion included: a) Current Equipment, b) Current Practice and Usage, c) Future Trends, d) Short Term Research Needs, e) Long Term Research Needs, and f) other issues. The results of the three smaller groups' deliberations were discussed when the full workshop reconvened. The responses from each group were merged into a combination of issues that related to the use and performance of the lens of the SCBA. The primary concerns and research priorities were the characterization of the fire fighter environment, performance of current and new technology, development of representative and realistic testing, and improvements to fire fighter training on the limitations of protective equipment. A significant amount of discussion concentrated on the testing for NFPA certification, which currently contains limited thermal testing.

The popular theme of this book deals with the underlying causes of mysteries and unresolved questions of great interest to both the layman and serious scholar that have become commonplace in our society. Topics range from scientific enigmas--such as the moon and the origins of the Great Pyramid and Sphinx--to religious contradictions on the life of Jesus, the nature of the soul, heaven and hell and the popular conundrums, such as the Bermuda Triangle, Stonehenge, etc., with a thorough review of notorious 9/11 event, revealing the true underlying menace. However, while exploring these fascinating subjects, their hidden agendas are exposed, revealing a history of gross manipulations assisted by the role of mythology, and how this is concealed within media politics, covert politics and exo-politics, combining the activities of HAARP, the Illuminati, and MJ-12, etc., finalizing with what is in store for the human race.

OSHA (29 CFR 1910.119) has recognized AIChE/DIERS two-phase flow publications as examples of "good engineering practice" for process safety management of highly hazardous materials. The prediction of when two-phase flow venting will occur, and the applicability of various sizing methods for two-phase vapor-liquid flashing flow, is of particular interest when designing emergency relief systems to handle runaway reactions. This comprehensive sourcebook brings together a wealth of information on methods that can be used to safely size emergency relief systems for two-phase vapor-liquid flow for flashing or frozen, viscous or nonviscous fluids. Design methodologies are illustrated by selected sample problems. Written by industrial experts in the safety field, this book will be invaluable to those charged with operating, designing, or managing today's and tomorrow's chemical process industry facilities.

In the forensic context it is quite common for nonhuman bones to be confused with human remains and end up in the medical examiner or coroner system. It is also quite common for skeletal remains (both human and nonhuman) to be discovered in archaeological contexts. While the difference between human and nonhuman bones is often very striking, it can also be quite subtle. Fragmentation only compounds the problem. The ability to differentiate between human and nonhuman bones is dependent on the training of the analyst and the available reference and/or comparative material. Comparative Osteology is a photographic atlas of common North American animal bones designed for use as a laboratory and field guide by the forensic scientist or archaeologist. The intent of the guide is not to be inclusive of all animals, but rather to present some of the most common species which also have the highest likelihood of being potentially confused with human remains. An affordably priced, compact laboratory/field manual, comparing human and nonhuman bones Contains almost 600 high-quality black and white images and diagrams, including inch and centimeter scales with each photograph Written by the foremost forensic scientists with decades of experience in the laboratory and as expert witnesses An additional Companion Web site hosts images from the volume the reader can magnify and zoom into to see specific landmarks and features on bones

Here are the proceedings of the Falk Symposium 150, "Disease Progression and Disease Prevention in the Gastrointestinal Tract", held in Berlin, Germany, October, 2005. Pathogenic processes are described as well as primary and secondary prevention and treatment of disease. The symposium generated new perspectives on the various different pathogenic mechanisms in gastrointestinal organs. The book summarizes the state of the art in these different disease entities, as presented at the meeting. In Catholic Literary Giants, Joseph Pearce takes the reader on a dazzling tour of the creative landscape of Catholic prose and poetry. Covering the vast and impressive terrain from Dante to Tolkien, from Shakespeare to Waugh, this book is an immersion into the spiritual depths of the Catholic literary tradition with one of today's premier literary biographers as our guide. Focusing especially on the literary revival of the twentieth century, Pearce explores well-known authors such as G.K. Chesterton, Graham Greene and J.R.R. Tolkien, while introducing lesser-known writers Roy Campbell, Maurice

Baring, Owen Barfield and others. He even includes the new saint, Pope John Paul II, who wrote many literary and poetic pieces, among them the story that was made into a feature film, *The Jeweler's Shop*.

This book constitutes the thoroughly refereed post-proceedings of three workshops and an industrial track held in conjunction with the 11th Pacific-Asia Conference on Knowledge Discovery and Data Mining, PAKDD 2007, held in Nanjing, China in May 2007. The 62 revised full papers presented together with an overview article to each workshop were carefully reviewed and selected from 355 submissions.

In 80 entries this work provides an introduction to the key ideas of cultural anthropology. In each article--culture, race, materialism, semiotics, "primitive," etc.--Winthrop provides a balance between describing a concept's contemporary theoretical relevance and tracing its development, including the broader intellectual context transcending professional anthropology. Thus the article on "interpretation" discusses St. Augustine, Schliermacher, Dilthey, and Gadamer, as well as Geertz and Evans-Pritchard. That on "ethnology" treats Boemus, Acosta, and Pritchard as well as the Boasians. The article on "nature" contrasts the Greek concept of *physis* with the Roman *natura*. Though this is a work of synthesis rather than of original historical scholarship, Winthrop quotes primary sources as much as possible, to let the key figures speak for themselves.

Having a basic knowledge of Java would be helpful. What You Will Learn Identify performance issues in Clojure programs using different profiling tools Master techniques to achieve numerical performance in Clojure Use Criterion library to measure latency of Clojure expressions Exploit Java features in Clojure code to enhance performance Avoid reflection and boxing with type hints Understand Clojure's concurrency and state-management primitives in depth Measure and monitor performance, and understand optimization techniques In Detail Clojure treats code as data and has a macro system. It focuses on programming with immutable values and explicit progression-of-time constructs, which are intended to facilitate the development of more robust programs, particularly multithreaded ones. It is built with performance, pragmatism, and simplicity in mind. Like most general purpose languages, various Clojure features have different performance characteristics that one should know in order to write high performance code. This book shows you how to evaluate the performance implications of various Clojure abstractions, discover their underpinnings, and apply the right approach for optimum performance in real-world programs. It starts by helping you classify various use cases and the need for them with respect to performance and analysis of various performance aspects. You will also learn the performance vocabulary that experts use throughout the world and discover various Clojure data structures, abstractions, and their performance characteristics. Further, the book will guide you through enhancing performance by using Java interoperability and JVM-specific features from Clojure. It also highlights the importance of using the right concurrent data structure and Java concurrency abstractions. This book also sheds light on performance metrics for measuring, how to measure, and how to visualize and monitor the collected data. At the end of the book, you will learn to run a performance profiler, identify bottlenecks, tune performance, and refactor code to get a better performance. Style and approach An easy-to-follow guide full of real-world examples and self-sufficient code snippets that will help you get your hands dirty with high performance programming with Clojure.

Practitioners often say: 'We need to do something differently but are not sure what to do or how to do it' and 'Scientists explain complexity but don't tell you what to do in practical terms'. This book has been written to offer solutions for these practitioners - to provide an Approach for 'putting complexity to work'. Practice is, de facto, determined by changing contexts. In a specific instance, what needs doing will depend on the circumstances, and cannot be bounded or decided in advance. But when most auditors, donors or managers demand tangible, target-driven results within a fixed time frame, how can practitioners convince them that working with the open principles of complexity will lead to

more successful and sustainable solutions? This book is not 'yet another' complexity book. What it offers is an in-depth, systematic, Framework that practitioners can use to focus on the dynamic phenomena already active in their working context, to be able to shape and influence these phenomena 'on the fly'. The authors present six case studies, including the UK Fuel Crisis (2000) and the 2010 Gulf of Mexico Oil Spill. Their Approach reveals a clear understanding of the stresses and strains that were felt throughout the crises and how these might have been handled differently had an appreciation of the underlying complexity been part of standard practice. Drawn from their own experiences and those of other practitioners, and to bridge the gap between theory, experience and practice, the authors have produced a clear and erudite 'bible' for realising the inherent benefits of 'putting complexity to work'.

Concepts from Tensor Analysis and Differential Geometry discusses coordinate manifolds, scalars, vectors, and tensors. The book explains some interesting formal properties of a skew-symmetric tensor and the curl of a vector in a coordinate manifold of three dimensions. It also explains Riemann spaces, affinely connected spaces, normal coordinates, and the general theory of extension. The book explores differential invariants, transformation groups, Euclidean metric space, and the Frenet formulae. The text describes curves in space, surfaces in space, mixed surfaces, space tensors, including the formulae of Gaus and Weingarten. It presents the equations of two scalars K and Q which can be defined over a regular surface S in a three dimensional Riemannian space R. In the equation, the scalar K, which is an intrinsic differential invariant of the surface S, is known as the total or Gaussian curvature and the scalar U is the mean curvature of the surface. The book also tackles families of parallel surfaces, developable surfaces, asymptotic lines, and orthogonal ennuples. The text is intended for a one-semester course for graduate students of pure mathematics, of applied mathematics covering subjects such as the theory of relativity, fluid mechanics, elasticity, and plasticity theory.

Improvement is fundamental to the competitiveness of networks and requires the participating firms to collaborate in identifying and introducing changes. This book presents collaborative strategic improvement as a cycle of activities in which firms in a network can engage together. Drawing on actual cases, authors link this cycle with disciplined action learning as a means of building upon experience generated through collaborative action. They describe how a network can learn from experience and deploy that learning in the marketplace.

This book describes the development of cost effective abatement strategies aimed at controlling air pollutant emissions in Europe, particularly ground level ozone. The author gives a thorough evaluation of the results achieved for different environmental targets, and proposes a modelling scheme for emission targets required to achieve compliance with EU thresholds, and calculations reveal the need to review established ozone thresholds and emission limits.
