"In International Groundwater Law and the US-Mexico Border Region, María Milanés Murcia provides a study and analysis of the international groundwater law. The regulation and groundwater management along the US-Mexico border reflect the current international trends for management of transboundary groundwater. International Groundwater Law and the US-Mexico Border Region offers a new international legal and institutional framework to manage fossil aquifers and groundwater in conjunctive use with surface water, where specific guidelines and recommendations for water banking can improve water allocation and protect the environment. This framework can be adapted to any region of around the world. The US-Mexico border is the case study selected to apply and demonstrate the efficacy of this legal and institutional framework"--

As today's cars continue to become more complicated and complex, the cost to repair them has continued to climb. However, with some basic knowledge and a little know-how, many of the most expensive repairs can be avoided by simple, regular maintenance, or relatively inexpensive repairs that can be done with a few tools and step-by-step instructions. Car expert, Dave Stribling, has seen every repair in the book, and in *Idiot's Guides: Auto Repair and Maintenance*, he arms readers with the knowledge they'll need to troubleshoot and diagnose common problems and make simple repairs that are universal to most makes and models. Dozens of step-by-step, full-color photos and illustrations make DIY car repairs and maintenance so much easier. When the repair calls for an expert the time comes to take the car to the shop, Dave arms readers with the knowledge they'll need to make the right choices, to avoid unnecessary repairs, and to minimize the possibility of getting ripped off.

The aim of this book is to help students write mathematics better. Throughout it are large exercise sets well-integrated with the text and varying appropriately from easy to hard. Basic issues are treated, and attention is given to small issues like not placing a mathematical symbol directly after a punctuation mark. And it provides many examples of what students should think and what they should write and how these two are often not the same.

Henri de-Toulouse-Lautrec brought to his art a zest for life as well as an impeccable style. It is an exciting discovery to find that Lautrec applies this same exuberance and meticulous technique to the art of cuisine--that he invented recipes and cooked new dishes as an artistic creation worthy of his serious attention. This volume is a collection of the recipes that Lautrec invented, or were garnered in his company from acquaintances of all classes of society. It has been illustrated with the menus that Lautrec himself designed and decorated, as well as with a rich abundance of other appropriate Lautrec paintings and drawings. The frontispiece is a portrait by Edouard Vuillard of Lautrec preparing one of his masterful dishes. The recipes are given here in their original form, retaining their color of thought and language. The only modifications are culinary notes that have been added to facilitate the work of modern cooks. Lautrec took great pride in his culinary ability,

and if he felt it would not be appreciated, he would say that some people "are not worth of ring dove with olives, they will never have any and they will never know what it is." Lautrec planned meals carefully, made beautifully decorated menus, and was inspired by the dinners to draw more sketches of the dinners, and of the food. He also brought to cuisine, as to the rest of his life, a marvelous wit. Who could forget the invitation to eat kangaroo, in honor of an animal that he had seen boxing at a circus (it was replaced at the last moment by an enormous sheep with an artificial pouch): or the housewarming of the apartment of his friend Natanson, where in a crazy atmosphere, he managed to intoxicate the artistic elite of Paris and launch the fashion of cocktail food. We owe the record of this cuisine (and also of a great body of the art collection itself) to Maurice Joyant. Joyant and Lautrec had been childhood friends, and their intimacy was renewed and deepened during the Montmartre years, when Lautrec's fame was growing and Joyant was director of the same art gallery in Paris that Theo Van Gogh had run before him. Lautrec was, throughout their relationship, the artist and innovator; Joyant, the steadying influence, the protector, and, after the painter's death, the executor. This book is a tribute to their friendship and to their daily intercourse in art and in cuisine. Thus, art, friendship, and food have come together in *The Art of Cuisine* as a joyful legacy of Henry de Toulouse-Lautrec and Maurice Joyant.

A man with humble beginnings on the family farm, minimal formal education and no qualifications, but an enormous drive and vision. Along with a very smart, loyal and patient wife! He founded one of the most successful automotive small businesses in Australia, was the initiator of trends, creator some of the most radical, yet immaculately engineered cars this country (and all others) have seen and inspired thousands to modify their own cars. Often found observing and listening to reactions from a distance with what many misconstrue as a grumpy, dour look on his face, he prefers to let his cars do the talking, and boy do they do get people talking! Following is the story of a name well recognised in the Australian automotive landscape, but a person who very few actually really know.

The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics.

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.

These two works on life's fleeting pleasures are by Buddhist monks from medieval Japan, but each shows a different world-view. In the short memoir *Hôjôki*, Chômei recounts his decision to withdraw from worldly affairs and live as a hermit in a tiny hut in the mountains, contemplating the impermanence of human existence. Kenko, however, displays a fascination with more earthy matters in his collection of anecdotes, advice and observations. From ribald stories of drunken monks to aching nostalgia for the fading traditions of the Japanese court, *Essays in Idleness* is a constantly surprising work that ranges across the spectrum of human experience. Meredith McKinney's excellent new translation also includes notes and an introduction exploring the spiritual and historical background of the works. Chômei was born into a family of Shinto priests in around 1155, at a time when the stable world of the court was rapidly breaking up. He became an important though minor poet of his day, and at the age of fifty, withdrew from the world to become a tonsured monk. He died in around 1216. Kenkô was born around 1283 in Kyoto. He probably became a monk in his late twenties, and was also noted as a calligrapher. Today he is remembered for his wise and witty aphorisms, '*Essays in Idleness*'. Meredith McKinney, who has also translated Sei Shonagon's *The Pillow Book* for Penguin Classics, is a translator of both contemporary and classical Japanese literature. She lived in Japan for twenty years and is currently a visiting fellow at the Australian National University in Canberra. '[*Essays in Idleness* is] a most delightful book, and one that has served as a model of Japanese style and taste since the 17th century. These cameo-like vignettes reflect the importance of the little, fleeting futile things, and each essay is Kenko himself' Asian Student
