Deep and Deep Publications

This comprehensive history of Ontario's agricultural development, first published in 1946, is a classic of scholarship and readability. It will appeal not only to agriculturalists and historians but also to anyone interested in life in early Ontario.

While the science of yogurt is nearly as old as the origin of mankind, there have been rapid changes in yogurt development since the turn of the 19th century, fueled by continuing developments in

biological sciences. *Development and Manufacture of Yogurt and Other Functional Dairy Products* presents a comprehensive review of all aspects of yogurt and other fermented dairy foods, including production, processing, preparation, regulations, and health aspects. Condensing more than 12,000 pages of recently published literature, expert contributors, including several clinicians, address the most recent developments in probiotics and the interaction between yogurt and immunological and intestinal bowel diseases. They explain how beneficial and harmful bacteria are colonized in the human intestinal system and how those bacteria can either strengthen or weaken immunological functions. This resource also explores the little-known varieties of functional dairy products – such as ayran, kefir, koumiss, cacik, and tarator – that are currently only consumed in small parts of the world but that are likely to reach supermarkets worldwide in the not-so-distant future. *Development and Manufacture of Yogurt and Other Functional Dairy Products* presents the most recent developments in biosciences and their applications in yogurt-human health interactions. The depth and breadth of coverage make this book an indispensable reference for those involved with the research and manufacturing of milk and dairy products.

In Indian context.

"The following study of the Nebraska dairy industry, as directed by LB 941, highlights dairy production trends and the value of the dairy industry, and compares those trends to other states. Ultimately, this study offers a current baseline for the industry in order to help evaluate possible next steps to support and grow dairy in the state In addition to opportunities for market growth, the study highlights the advantages Nebraska has for dairy farming as far as agricultural assets, such as feed resources, water resources and land for value-added use of livestock waste" (page 4).

Seminar paper from the year 2016 in the subject Business economics - Investment and Finance, language: English, abstract: Ethiopia is one of the Sub-Saharan Africa's developing countries with a large potential in livestock, being 1st among African countries and 9th in the world. Dairying is one of the livestock production systems practiced in almost all

over Ethiopia. The cattle population was estimated at about 50.9 million of which indigenous breeds accounted for 99.19 % while the rest is hybrids and pure exotic breeds. The main objective of this seminar is to review the challenges and opportunities of investment in dairy sector in Ethiopia. Dairy production in Ethiopia was mostly traditional and formal dairy production started in the early 1950s. In Ethiopia the three major production systems are: traditional smallholder; privatized state; and urban and peri-urban. Ethiopians consume less dairy products than per capita milk consumption and the country is not known to export dairy product and spent more money on importing milk and milk products. The livestock sector in general and the dairy sub-sector in particular do not make a substantial contribution to the national income, despite its large size, due to different challenges. The challenges are those attributed to demand and supply sides. Demand side includes population growth, seasonality of demand, low per capita consumption, low demand and high transaction costs. Supply side challenges can be: livestock population, animal health problem, feed and nutrition, low productivity and genetics, limited access and high cost of dairy heifers/cows, quality problem, collection problems, institutional concern, lack of technical support, inadequate extension and training services, lack of infrastructures, lack of
