After his debut in 1964 the Belgian painter, Raoul De Keyser (1930-2012) developed a working method that was as obstinate as it was tactical, in which the common distinctions between abstraction and figuration dissolve in the poetic binding of the work with the everyday. This catalogue to the first posthumous retrospective exhibition is conceived as a classic monograph on the life and work of the artist. Alongside a detailed account of the development of Keyser's oeuvre, the catalogue contains an comprehensive illustrated chronology as well as, for the first time, a chapter on drawing and photography. Equally interesting are quotes by artists such as Tomma Abts, Maria Eichhorn, Thomas Scheibitz and James Welling (among others) about their influential colleague. Published on the occasion of the exhibition, Raoul De Keyser: Oeuvre at Stedelijk Museum voor Actuele Kunst (S.M.A.K.), Gent in 2018/19, and Pinakothek der Moderne, Munich in 2019.

This book offers 150 12-lead ECGs and rhythm strips, each with a clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty. The unique page size allows presentation of all 12-lead ECGs across a single page for clarity. Several of the cases incorporate chest X-rays and coronary angiograms illustrating the appearances that are associated with various cardiac conditions. All the cases are graded in difficulty and are cross-referenced to the new editions of ECG Made Easy and ECG in Practice for further information. For this Fourth Edition over 30 new ECGs have been included, mainly to provide clearer examples, though the book deliberately retains some technically poor records to maintain a 'real-world' perspective.

A captivating and definitive account of the final days of Van Gogh's life and the incredible story of what followed. Divided into three parts, the book first examines the eventful days from the artists' departure from the asylum in Saint-Remy and arrival in Auvers until the shooting which brought his life to an end. During this time Van Gogh completed 70 paintings in 70 days. The second part delves deeper into the story of the artist's death, which has intrigued both experts and the public for years, revealing little-known stories and uncovering overlooked accounts. We then follow the story of how Van Gogh subsequently rose from relative obscurity to international renown and ultimately fame as one of the most recognisable and popular artists in the world.

Rebecca M. Warner's bestselling Applied Statistics: From Bivariate Through Multivariate Techniques has been split into two volumes for ease of use over a two-course sequence. Applied Statistics II: Multivariable and Multivariate Techniques, Third Edition is a core multivariate statistics text based on chapters from the second half of the original book. The text begins with two new chapters: an introduction to the new statistics, and a chapter on handling outliers and missing values. All chapters on statistical control and multivariable or multivariate analyses from the previous edition are retained (with the moderation chapter heavily revised) and new chapters have been added on structural equation modeling, repeated measures, and on additional statistical techniques. Each chapter includes a complete example, and begins by considering the types of research questions that chapter's technique can answer, progresses to data screening, and provides screen shots of SPSS menu selections and output, and concludes with sample results sections. By-hand computation is used, where possible, to show how elements of the output are related to each other, and to obtain confidence interval and effect size information when SPSS does not provide this. Datasets are available on the accompanying website.
