It can be difficult to think clearly and deeply when a decision must be made, especially for principals and other administrators barraged with information, questions, and demands on their time. When even the smallest mistake can negatively affect students and staff, strong decision-making skills are crucial. By focusing on key questions, however, school leaders can find a path through the complex decisions they encounter every day. *What If I'm Wrong? and Other Key Questions for Decisive School Leadership* guides you past the pitfalls of split-second instinct, groupthink, prejudice, and the rush to judgment. Leadership coach and former principal Simon Rodberg pulls together true stories from his own experience, examples of a range of school issues, and the latest research in cognitive science into a five-question framework for school leaders to ask themselves when facing a decision: - What am I missing? - What's one small step? - Where's the trade-off? - Does it have to be this way? - What if I'm wrong? By prompting you to reflect on your own thought processes and cognitive blind spots, Rodberg's approach helps you build good habits of strategic decision making. Learn to navigate both tough dilemmas and everyday challenges as a decisive school leader.

A "fascinating" look at what students in Russia, France, Iran, and other nations are taught about America (The New York Times Book Review). This "timely and important" book (History News Network) gives us a glimpse into classrooms across the globe, where opinions about the United States are first formed. *History Lessons* includes selections from textbooks and teaching materials used in Russia, France, Iran, Saudi Arabia, Cuba, Canada, and others, covering such events as the American Revolution, the Cuban Missile Crisis, the Iran hostage crisis, and the Korean War—providing some alternative viewpoints on the history of the United States from the time of the Viking explorers to the post-Cold War era. By juxtaposing starkly contrasting versions of the historical events we take

for granted, History Lessons affords us a sometimes hilarious, often sobering look at what the world thinks about America's past. "A brilliant idea." —Foreign Affairs

Discover how those who change the world do so with this thoughtful and timely book *Why do some changes occur, and others don't? What are the factors that drive successful social and environmental movements, while others falter? How Change Happens* examines the leadership approaches, campaign strategies, and ground-level tactics employed in a range of modern social change campaigns. The book explores successful movements that have achieved phenomenal impact since the 1980s—tobacco control, gun rights expansion, LGBT marriage equality, and acid rain elimination. It also examines recent campaigns that seem to have fizzled, like Occupy Wall Street, and those that continue to struggle, like gun violence prevention and carbon emissions reduction. And it explores implications for movements that are newly emerging, like Black Lives Matter. By comparing successful social change campaigns to the rest, *How Change Happens* reveals powerful lessons for changemakers who seek to impact society and the planet for the better in the 21st century. Today, the world offers us more options than ever before, but it also forces us to juggle more priorities, to make more choices, and to make them faster. The result: a crisis of doing too much, or not enough, and making our decisions based on impulse, stress or guilt. In *10-10-10* Suzy Welch offers an exciting, effective strategy that will help you make the right decision in any situation, at work or at home; with colleagues, family or friends. The rule is deceptively simple: when faced with a decision, consider what the consequences and outcomes of your various options would be in 10 minutes, 10 months, and 10 years. But the results are extraordinary. Using the framework of *10-10-10* will allow you to think through

your decisions and to match them with the expectations and values you hold dearest. Most importantly, it allows you to chart a path in the direction you want, and to head confidently towards it with focus, balance, and joy.

Everybody has to make decisions—they are unavoidable. Yet we receive little or no education or training on how to make decisions. Business decisions can be difficult: which people to hire, which product lines or facilities to expand and which to sell or shut down, which bid or proposal to accept, which process to implement, how much R&D to invest in, which environmental projects should receive the highest priority, etc. This book gives you all the tools you need to... • clarify and reach alignment on goals and objectives and understand trade-offs in reaching those goals, • develop and examine alternatives, • systematically analyze the effects of risk and uncertainty, and • maximize the chances of achieving your goals and objectives. Success (getting what you want) depends on luck and good decision making. You can't control your luck, but you can maximize your odds by making the best possible decisions, and this book gets you there. Broadly speaking, this book organizes and presents otherwise formal decision-making tools in an intuitively understandable fashion. The presentation is informal, but the concepts and tools are research-based and formally accepted.

Why do smart and experienced leaders make flawed, even catastrophic, decisions? Why do people keep believing they have made the right choice, even with the disastrous result staring them in the face? And how can you be sure you're making the right decision--without the benefit of hindsight? Sydney Finkelstein, Jo Whitehead, and Andrew Campbell show how the usually beneficial processes of the human mind can become traps when we face big decisions. The authors show how the shortcuts our brains have learned to take over millennia of evolution can derail our decision making. Think Again offers a powerful model for making better decisions, describing the key red flags to watch for and detailing the decision-making safeguards we need. Using examples from business, politics, and history, Think Again deconstructs bad decisions, as they unfolded in real time, to show how you can avoid the same fate.

George Baird probes into the conceptual lineage and current expressions of postmodernism and the critique of postmodern architecture over the past four decades.

The New York Times bestselling authors of *Switch* and *Made to Stick* explore why certain brief experiences can jolt us and elevate us and change us—and how we can learn to create such extraordinary moments in our life and work. While human lives are endlessly variable, our most memorable positive moments are dominated by four elements: elevation, insight, pride, and connection. If we embrace these elements, we can conjure more moments that matter. What if a teacher could design a lesson that he knew his students would remember twenty years later? What if a manager knew how to create an experience that would delight customers? What if you had a better sense of how to create memories that matter for your children? This book delves into some fascinating mysteries of experience: Why we tend to remember the best or worst moment of an experience, as well as the last moment, and forget the rest. Why “we feel most comfortable when things are certain, but we feel most alive when they’re not.” And why our most cherished memories are clustered into a brief period during our youth. Readers discover how brief experiences can change lives, such as the experiment in which two strangers meet in a room, and forty-five minutes later, they leave as best friends. (What happens in that time?) Or the tale of the world’s youngest female billionaire, who credits her resilience to something her father asked the family at the dinner table. (What was that simple question?) Many of the defining moments in our lives are the result of accident or luck—but why would we leave our most meaningful, memorable moments to chance when we can create them? *The Power of Moments* shows us how to be the author of richer experiences.

"Indistractable provides a framework that will deliver the focus you need to get results." —James Clear, author of Atomic Habits "If you value your time, your focus, or your relationships, this book is essential reading. Later, as you're about to get back to work, a colleague taps you on the shoulder to chat. At home, screens get in the way of quality time with your family. Another day goes by, and once again, your most important personal and professional goals are put on hold. What would be possible if you followed through on your best intentions? What could you accomplish if you could stay focused? What if you had the power to become "indistractable?" International bestselling author, former Stanford lecturer, and behavioral design expert, Nir Eyal, wrote Silicon Valley's handbook for making technology habit-forming. Five years after publishing Hooked, Eyal reveals distraction's Achilles' heel in his groundbreaking new book. In Indistractable, Eyal reveals the hidden psychology driving us to distraction. He describes why solving the problem is not as simple as swearing off our devices: Abstinence is impractical and often makes us want more. Eyal lays bare the secret of finally doing what you say you will do with a four-step, research-backed model. Indistractable reveals the key to getting the best out of technology, without letting it get the best of us. Inside, Eyal overturns conventional wisdom and reveals: • Why distraction at work is a symptom of a dysfunctional company culture—and how to fix it • What really drives human behavior and why "time management is pain management" • Why your relationships (and your sex life) depend on you becoming indistractable • How to raise indistractable children in an increasingly distracting world Empowering and optimistic, Indistractable provides practical, novel techniques to control your time and attention—helping you live the life you really want.

You are faced with so many difficult decisions. Often your decision making seems random. It can be swayed by different situations and emotions. You need

to be more rigorous in the way you make decisions and yet you have very little time to do so. Experience from others who have made tough decisions and a framework to help you do so would be invaluable. The courage to make decisions is sometimes a bit elusive. It is difficult to find the calmness to be able to make and live with those decisions. There is so much that can be learned from the experience of others. After working through this book you will have the courage of your convictions and the ability to make difficult decisions count. The book sets out a framework for making difficult decisions that has been tried and tested. It has been used successfully in one-to-one coaching with senior leaders in both the public, private and voluntary sectors. The framework is built on the following strands: Clarity; Conviction; Courage; and Communication.

The first book to use the unexpected discoveries of neuroscience to help us make the best decisions Since Plato, philosophers have described the decision-making process as either rational or emotional: we carefully deliberate, or we “blink” and go with our gut. But as scientists break open the mind’s black box with the latest tools of neuroscience, they’re discovering that this is not how the mind works. Our best decisions are a finely tuned blend of both feeling and reason—and the precise mix depends on the situation. When buying a house, for example, it’s best to let our unconscious mull over the many variables. But when we’re picking a stock, intuition often leads us astray. The trick is to determine when to use the different parts of the brain, and to do this, we need to think harder (and smarter) about how we think. Jonah Lehrer arms us with the tools we need, drawing on cutting-edge research as well as the real-world experiences of a wide range of “deciders”—from airplane pilots and hedge fund investors to serial killers and poker players. Lehrer shows how people are taking advantage of the new science to make better television shows, win more football games, and improve military intelligence. His goal is to answer two questions that are of interest to just about anyone, from CEOs to firefighters: How does the human mind make decisions? And how can we make those decisions better?

Your guide to mobilizing your whole organization to take your business forward, this practical book identifies the chronic challenges that keep organizations from decisively executing strategy, and gives you a practical game plan for breaking through. --

Explains how to overcome natural biases and irrational thinking to make better decisions in work and life, drawing on extensive studies and research to outline specific strategies for enabling clear-headed thinking.

Did I just make the best possible decision? Could there have been a better option? Should I have taken the other road? Am I getting the most out of my efforts and resources? While an abundance of choices is part of the very fabric of affluent civilized society, more often than not, it simply leads to a state where we either stagnate without moving forward, postpone the decision to an indefinite future, or altogether run away to avoid landing in situations which would require decisiveness on our part. Unfortunately, such wishy-washy half-measures can

hardly put off the reality of life. Whether for personal or professional advancement, to gain anything at all, we need to be fully prepared and equipped to make difficult choices at every turn. But how can we be certain that the path taken is the right choice? That's where this book comes in. So step up to the plate and get ready to master the art of decision-making. Take the reins of your life firmly back into your own hands, learn how to channel your efforts and throw your weight behind your choices, and turn into a powerful force to be reckoned with. Let's get started!

Wall Street Journal bestseller! Poker champion turned business consultant Annie Duke teaches you how to get comfortable with uncertainty and make better decisions as a result. In Super Bowl XLIX, Seahawks coach Pete Carroll made one of the most controversial calls in football history: With 26 seconds remaining, and trailing by four at the Patriots' one-yard line, he called for a pass instead of a hand off to his star running back. The pass was intercepted and the Seahawks lost. Critics called it the dumbest play in history. But was the call really that bad? Or did Carroll actually make a great move that was ruined by bad luck? Even the best decision doesn't yield the best outcome every time. There's always an element of luck that you can't control, and there is always information that is hidden from view. So the key to long-term success (and avoiding worrying yourself to death) is to think in bets: How sure am I? What are the possible ways things could turn out? What decision has the highest odds of success? Did I land in the unlucky 10% on the strategy that works 90% of the time? Or is my success attributable to dumb luck rather than great decision making? Annie Duke, a former World Series of Poker champion turned business consultant, draws on examples from business, sports, politics, and (of course) poker to share tools anyone can use to embrace uncertainty and make better decisions. For most people, it's difficult to say "I'm not sure" in a world that values and, even, rewards the appearance of certainty. But professional poker players are comfortable with the fact that great decisions don't always lead to great outcomes and bad decisions don't always lead to bad outcomes. By shifting your thinking from a need for certainty to a goal of accurately assessing what you know and what you don't, you'll be less vulnerable to reactive emotions, knee-jerk biases, and destructive habits in your decision making. You'll become more confident, calm, compassionate and successful in the long run.

Add value with every decision using a simple yet powerful framework Few things are as valuable in business, and in life, as the ability to make good decisions. Can you imagine how much more rewarding your life and your business would be if every decision you made were the best it could be? Decision Quality empowers you to make the best possible choice and get more of what you truly want from every decision. Dr. Carl Spetzler is a leader in the field of decision science and has worked with organizations across industries to improve their decision-making capabilities. He and his co-authors, all experienced consultants and educators in this field, show you how to frame a problem or opportunity, create a set of

attractive alternatives, identify relevant uncertain information, clarify the values that are important in the decision, apply tools of analysis, and develop buy-in among stakeholders. Their straightforward approach is elegantly simple, yet practical and powerful. It can be applied to all types of decisions. Our business and our personal lives are marked by a stream of decisions. Some are small. Some are large. Some are life-altering or strategic. How well we make those decisions truly matters. This book gives you a framework and thinking tools that will help you to improve the odds of getting more of what you value from every choice. You will learn: The six requirements for decision quality, and how to apply them The difference between a good decision and a good outcome Why a decision can only be as good as the best of the available alternatives Methods for making both "significant" and strategic decisions The mental traps that undermine decision quality and how to avoid them How to deal with uncertainty—a factor in every important choice How to judge the quality of a decision at the time you're making it How organizations have benefited from building quality into their decisions. Many people are satisfied with 'good enough' when making important decisions. This book provides a method that will take you and your co-workers beyond 'good enough' to true Decision Quality.

Just making a decision can be hard enough, but how do you begin to judge whether it's the right one? Chip and Dan Heath, authors of #1 New York Times best-seller *Switch*, show you how to overcome your brain's natural shortcomings. In *Decisive*, Chip and Dan Heath draw on decades of psychological research to explain why we so often get it very badly wrong - why our supposedly rational brains are frequently tripped up by powerful biases and wishful thinking. At the same time they demonstrate how relatively easy it is to avoid the pitfalls and find the best answers, offering four simple principles that we can all learn and follow.

In the process, they show why it is that experts frequently make mistakes. They demonstrate the perils of getting trapped in a narrow decision frame. And they explore people's tendency to be over-confident about how their choices will unfold. Drawing on case studies as diverse as the downfall of Kodak and the inspiring account of a cancer survivor, they offer both a fascinating tour through the workings of our minds and an invaluable guide to making smarter decisions. Winner in the Practical Manager category of the CMI Management Book of the Year awards 2014.

The four principles that can help us to overcome our brains' natural biases to make better, more informed decisions--in our lives, careers, families and organizations. In *Decisive*, Chip Heath and Dan Heath, the bestselling authors of *Made to Stick* and *Switch*, tackle the thorny problem of how to overcome our natural biases and irrational thinking to make better decisions, about our work, lives, companies and careers. When it comes to decision making, our brains are flawed instruments. But given that we are biologically hard-wired to act foolishly and behave irrationally at times, how can we do better? A number of recent bestsellers have identified how irrational our decision making can be. But being aware of a bias doesn't correct it, just as knowing that you are nearsighted doesn't help you to see better. In *Decisive*, the Heath brothers, drawing on extensive studies, stories and research, offer specific, practical tools that can help us to think more clearly about our options, and get out of our heads, to improve our decision making, at work and at home.

Charlotte Pierce-Baker did everything right when raising her son, providing not only emotional support but the best education possible. At age twenty-five, he was pursuing a postgraduate degree and seemingly in control of his life. She never imagined her high-achieving son would wind up handcuffed, dirty, and in jail. The moving story of an African American family facing the challenge of bipolar disorder, *This Fragile Life* provides insight into mental disorders as well as family dynamics. Pierce-Baker traces the evolution of her son's illness and, in looking back, realizes she mistook warning signs for typical child and teen behavior. Hospitalizations, calls in the night, alcohol and drug relapses, pleas for money, and continuous disputes, her son's journey was long, arduous, and almost fatal. *This Fragile Life* weaves a fascinating story of mental illness, race, family, the drive of African Americans to succeed, and a mother's love for her son.

Why is it so hard to make lasting changes in our companies, in our communities, and in our own lives? The primary obstacle is a conflict that's built into our brains, say Chip and Dan Heath, authors of the critically acclaimed bestseller *Made to Stick*. Psychologists have discovered that our minds are ruled by two different systems - the rational mind and the emotional mind—that compete for control. The rational mind wants a great beach body; the emotional mind wants that Oreo cookie. The rational mind wants to change something at work; the emotional mind loves the comfort of the existing routine. This tension can doom a change effort - but if it is overcome, change can come quickly. In *Switch*, the Heaths show how everyday people - employees and managers, parents and nurses - have united both minds and, as a result, achieved dramatic results:

- The lowly medical interns who managed to defeat an entrenched, decades-old medical practice that was endangering patients
- The home-organizing guru who developed a simple technique for overcoming the dread of housekeeping
- The manager who transformed a lackadaisical customer-support team into service zealots by

removing a standard tool of customer service In a compelling, story-driven narrative, the Heaths bring together decades of counterintuitive research in psychology, sociology, and other fields to shed new light on how we can effect transformative change. Switch shows that successful changes follow a pattern, a pattern you can use to make the changes that matter to you, whether your interest is in changing the world or changing your waistline.

The old saying goes, "To the man with a hammer, everything looks like a nail." But anyone who has done any kind of project knows a hammer often isn't enough. The more tools you have at your disposal, the more likely you'll use the right tool for the job - and get it done right. The same is true when it comes to your thinking. The quality of your outcomes depends on the mental models in your head. And most people are going through life with little more than a hammer. Until now. *The Great Mental Models: General Thinking Concepts* is the first book in *The Great Mental Models* series designed to upgrade your thinking with the best, most useful and powerful tools so you always have the right one on hand. Chip and Dan Heath, the bestselling authors of *Switch* and *Made to Stick*, tackle one of the most critical topics in our work and personal lives: how to make better decisions. Research in psychology has revealed that our decisions are disrupted by an array of biases and irrationalities: We're overconfident. We seek out information that supports us and downplay information that doesn't. We get distracted by short-term emotions. When it comes to making choices, it seems, our brains are flawed instruments. Unfortunately, merely being aware of these shortcomings doesn't fix the problem, any more than knowing that we are nearsighted helps us to see. The real question is: How can we do better? In *Decisive*, the Heaths, based on an exhaustive study of the decision-making literature, introduce a four-step process designed to counteract these biases. Written in an engaging and compulsively readable style, *Decisive* takes readers on an unforgettable journey, from a rock star's ingenious decision-making trick to a CEO's disastrous acquisition, to a single question that can often resolve thorny personal decisions. Along the way, we learn the answers to critical questions like these: How can we stop the cycle of agonizing over our decisions? How can we make group decisions without destructive politics? And how can we ensure that we don't overlook precious opportunities to

change our course? Decisive is the Heath brothers' most powerful—and important—book yet, offering fresh strategies and practical tools enabling us to make better choices. Because the right decision, at the right moment, can make all the difference.

“Timely and important . . . It should be our North Star for the recovery and beyond.” —Hillary Clinton “Sperling makes a forceful case that only by speaking to matters of the spirit can liberals root their belief in economic justice in people’s deepest aspirations—in their sense of purpose and self-worth.” —The New York Times When Gene Sperling was in charge of coordinating economic policy in the Obama White House, he found himself surprised when serious people in Washington told him that the Obama focus on health care was a distraction because it was “not focused on the economy.” How, he asked, was the fear felt by millions of Americans of being one serious illness away from financial ruin not considered an economic issue? Too often, Sperling found that we measured economic success by metrics like GDP instead of whether the economy was succeeding in lifting up the sense of meaning, purpose, fulfillment, and security of people. In *Economic Dignity*, Sperling frames the way forward in a time of wrenching change and offers a vision of an economy whose guiding light is the promotion of dignity for all Americans.

The U.S. military does not believe its soldiers, sailors, airmen, and marines should be engaged in combat with adversaries on a "level playing field." Our combat individuals enter engagements to win. To that end, the United States has used its technical prowess and industrial capability to develop decisive weapons that overmatch those of potential enemies. In its current engagement-what has been identified as an "era of persistent conflict"- the nation's most important weapon is the dismounted soldier operating in small units. Today's soldier must be prepared to contend with both regular and irregular adversaries. Results in Iraq and Afghanistan show that, while the U.S. soldier is a formidable fighter, the contemporary suite of equipment and support does not afford the same high degree of overmatch capability exhibited by large weapons platforms-yet it is the soldier who ultimately will play the decisive role in restoring stability. *Making the Soldier Decisive on Future Battlefields* establishes the technical requirements for overmatch capability for dismounted soldiers operating individually or in small units. It prescribes technological and organizational capabilities needed to make the dismounted soldier a decisive weapon in a changing, uncertain, and complex future environment and provides the Army with 15 recommendations on how to focus its efforts to enable the soldier and tactical small unit (TSU) to achieve overmatch.

Based upon his weekly Harvard Business Review columns (which is one of the most popular columns on HBR.com, receiving hundreds of thousands of unique page views a month), *18 MINUTES* clearly shows how busy people can cut through all the daily clutter and distractions and find a way to focus on those key items which are truly the top priorities in our lives. Bregman works from the premise that the best way to combat constant and distracting interruptions is to create productive distractions of one's own. Based upon a series of short bite-sized chapters, his approach allows us to safely navigate through the constant chatter of emails, text messages, phone calls, and endless meetings that prevent us from focusing our time on those things that are truly important to us. Mixing first-person insights along with unique case studies, Bregman sprinkles his charming book with pathways which help guide us -- pathways that can get us on the right trail in 18 minutes or less.

Wall Street Journal Bestseller New York Times bestselling author Dan Heath explores how to prevent problems before they happen, drawing on insights from hundreds of interviews with unconventional problem solvers. So often in life, we get stuck in a cycle of response. We put out fires. We deal with emergencies. We stay downstream, handling one problem after another, but we never make our way upstream to fix the systems that caused the problems. Cops chase robbers, doctors treat patients with chronic illnesses, and call-center reps address customer complaints. But many crimes, chronic illnesses, and customer complaints are

preventable. So why do our efforts skew so heavily toward reaction rather than prevention? Upstream probes the psychological forces that push us downstream—including “problem blindness,” which can leave us oblivious to serious problems in our midst. And Heath introduces us to the thinkers who have overcome these obstacles and scored massive victories by switching to an upstream mindset. One online travel website prevented twenty million customer service calls every year by making some simple tweaks to its booking system. A major urban school district cut its dropout rate in half after it figured out that it could predict which students would drop out—as early as the ninth grade. A European nation almost eliminated teenage alcohol and drug abuse by deliberately changing the nation’s culture. And one EMS system accelerated the emergency-response time of its ambulances by using data to predict where 911 calls would emerge—and forward-deploying its ambulances to stand by in those areas. Upstream delivers practical solutions for preventing problems rather than reacting to them. How many problems in our lives and in society are we tolerating simply because we’ve forgotten that we can fix them?

We all want to make better decisions. The right decisions. But decision-making is tricky. The best of us are occasionally plagued by doubt. We backtrack and remake decisions we already made. Unmade decisions clog up our minds and corrode our inner peace. We're trapped in overanalysis paralysis. The truth is, we have a finite amount of time in this world. And stewing unnecessarily over a decision is a poor way to spend it. This book will shorten your decision-making time by illuminating the 4 false beliefs of the indecisive mind. It seems like some people were born boldly decisive while others were cursed with a nagging sense of uncertainty. But this is an illusion. Decisiveness is not a gift but a skill - a skill anyone can practice and master. This skill is not taught in school, yet it is the cornerstone of success and personal fulfillment. This book will hone your decision-making skills by providing not only theory, but 20 applicable exercises pertaining to the 5 decisive arts: The Art of Presence, The Art of Intuition, The Art of Momentum, The Art of Immediacy, The Art of Perspective. Never again will you waste your valuable time hesitating, worrying and flip-flopping between options and miss the chance to take action.
