Bruce Jenner captured America's attention by shattering world records in the Decathlon at the 1976 Summer Olympics. Launched onto the world stage, Jenner was young, photogenic, All-American. He humbly accepted the adulation of a nation, and has stayed a household name ever since, even more so in recent years as the patriarch of one of America's most famous—and infamous—families, the Kardashian / Jenner clan. Almost forty years later, the press has been covering Jenner's transition from male to female, and should he come out publicly, it would make him the highest-profile person ever to come out as transgender. Living life proudly and openly, Jenner would serve as a role model for much of the transgender community. But not for all. His path has been

controversial, as some advocates see the celebrity glare given off by his connection to the Kardashian family as exploitative, and his public persona making him a less-than-ideal spokesperson for transgendered people. Bruce Jenner, who seemingly always being watched by crowds, now finds himself more scrutinized than ever.

Misty memories of a boy born to a poor sharecropper in the worst economic depression the world has ever known come to life with dramatic clarity in this troubling memoir. Trapped into surviving on the pittance realized by his family for growing the deadly health killing tobacco plant, Jeff struggles to understand the societal contradictions that control his existence throughout the twentieth century. Imagination and dreamy fantasies fertilize larger hopes for him as he plows his father's lonely fields and wrestles with the arbitrary behavioral imperatives that control his life. Cruelly deprived of broad cultural stimulation, Jeff struggles to realize dreams fostered by Hollywood myths and pulp fiction. Plentiful food--a gift of the land--adequate housing and most of all, a pervasive love and caring concern by others sharing this community of poverty and hard work, not only are sustaining but give him sweet lasting memories of those hard times. Anger at deprivations endured by his parents fuel ambitions to escape a life growing the noxious crops of tobacco. Nourished by the love, warmth and generosity of a large extended family living a similar life, Jeff survives to engage the larger world where he encounters the many problems that befall allhuman beings.

Book Excerpt: o as he asked, would he let me alone. Wednesday evening we had a fine surprise: two of our "missing" returned. They had been forced to land behind the enemy's line because their motor had stopped. They were hardly down when the "Pisangs" (French peasants) came running toward them from every direction. They managed to get into a nearby woods by beating a hasty retreat. Behind them they heard the yelling of the men and women. The woods was surrounded, and they had to hide till night fell. Then they escaped into the Argonne Forest, under cover of darkness although fired on a number of times. Here they spent five days, avoiding French troops. As they had only berries and roots to eat, and could only travel at night, they were almost ready to surrender. But on the morning of the seventh day they heard someone say, in German, "Get on the job, you fool." Those were sweet words to them, for it was a scouting party of German Dragoons. Thus, they got back to us.M.,

Susan Tate Ankeny was sorting through the belongings of her late father—a World War II veteran bombardier who had bailed from a burning B-17 over Nazi-occupied France in 1944—when she found two boxes. One contained her dad’s Air Force uniform, and the other an unfinished memoir, stacks of envelopes, black-and-white photographs, mission reports, dog tags, and the fake identity cards he used in his escape. Ankeny spent more than a decade from that moment tracking down letter writers, their loved ones, and anyone who had played a role in her father's story, culminating in a trip to France where she retraced his path with the same people who had guided him more than sixty years ago. The result is an amazing, multifaceted World War II tale—perhaps one of the last of its kind to be enriched by an author’s interviews with participants. It traces the transformation of a small-town American boy into a bombardier, the thrill and chaos of an air war, and the horror of bailing from a flaming aircraft over enemy territory. And it distinguishes the actions of a little-known French resistance network for Allied airmen known as Shelburne while shining a light on the heroism of a teenage girl—Godelieve Van Laere—who saved the fallen Lieutenant Dean Tate, risking her life and forging a friendship that would last into a new century.

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

Photovoltaics is one of the most promising technologies for global energy production in the context of the energy crisis and climate change. Photovoltaic modules are now available in such a wide range of forms that nearly all of the usual flat parts of buildings can be provided with photovoltaic capabilities. In addition to producing energy, these modules offer a number of synergistic effects, since increasingly they are integrated as glazing elements and can perform such other functions as weather protection, solar control, and providing privacy. Special modules such as solar roofing tiles and solar membranes are available for particular applications. This book explains the technology, presents the available products, and communicates clearly how they are used in buildings, with a particular focus on large-scale buildings. It provides architects with all of the necessary know-how to provide a new or existing building with a photovoltaic system, covering both planning and implementation. Last but not least, it is a valuable practical instrument to prepare for communicating with the relevant manufacturers and clients.
