A 23-year-old African Caribbean woman presents in the emergency department with an acute onset facial rash. During initial assessment she complains of a two week history of general malaise, fatigue, fever, and weight loss. You have been assigned her examination...100 Cases in Dermatology presents 100 scenarios with a dermatological manifestation co

Dermoscopy can be a useful tool to evaluate skin of color for general dermatologic diseases; however, it does require practitioners to be aware of many points of difference from patients with lighter phototypes. This highly illustrated text brings together the pioneering experience of international experts to document patients of phototypes IV to VI (from subcontinental Asian, North African, South American, to African skin).

This edition covers all aspects of the subject needed by medical students. It is a volume in the Illustrated Colour Text series, with the subject matter divided into double-page spreads; this makes the information very accessible to the reader. Full use is made of flow charts and other graphics; clinical "boxes;" summary points; case histories; and clinical photographs. The whole orientation of the book is to concentrate on how clinical biochemistry relates to the care of the patient and to ensure that the medical student understands how to interpret laboratory.

Covers clinical biochemistry from the point of view of the clinician using the diagnostic service Presents topics in easily accessible two-page spreads Includes mini case histories, key point boxes, flowcharts, and summary points Well illustrated with four-color drawings and clinical photographs New appendix added of annotated web resources for students to take further many of the topics covered in the book. To reflect the difficulties people have sometimes in analyzing hyper- and hypo-kalaemia, the existing spread is split into two - one spread on hyperkalaemia and another on hypokalaemia. The spread on hypertension will be revised and updated to reflect the fact that biochemistry is used as much or more in guiding treatment as it is in screening for secondary hypertension. Spreads on Myocardial Infarction, Cancer and Tumour Markers will all substantially revised and updated.

Beautifully illustrated and finely detailed, the *Dermatological Atlas of Black Skin* provides comprehensive coverage of cutaneous diseases in black people. The clinical needs of this large ethnic group must be addressed on an international level; to date, very few books have been devoted entirely to this subject. In addition to the skin conditions depicted throughout the book, the text has also been updated to include current demographics. The authors examine 32 diseases with clinical variations encountered in black skin with distinctive color changes. Each disease is fully illustrated, with full definitions, etiology, clinical perspective, differential diagnosis and relevant treatment options. This unique, informative publication will ensure that clinicians can recognize, diagnose and treat skin diseases accurately in black people. The Introduction provides background to the subject, which is enormously helpful as a reference guide.

This book is a quick reference guide to the new, more personalized approaches to the management of skin disorders that have emerged as a result of progress in our understanding of the genetic background and pathophysiology of skin diseases and the

diversity of mechanisms underlying their clinical heterogeneity. A wide range of personalized and targeted therapies are described, including those for different skin cancers, chronic inflammatory skin diseases, and autoimmune diseases. In addition, readers will find that the book documents how research results in personalized medicine can be effectively transferred to dermatological practice and looks forward to future treatments that might be developed on the basis of recent research findings. The authors are all recognized experts in the field, and the text is presented in a reader-friendly format and well illustrated.

This book identifies the most common presentations and essential features of top dermatological conditions in patients with skin of color. It presents practical information in a case-based organization to assist dermatologists in clinical decision making, and discusses important cultural beliefs that must be considered in order to provide optimal care to patients with skin of color. There is an increasing demand for dermatologic treatments in patients with skin of color, as well as an accompanying need for education and training in this quickly expanding market. Skin of color is a key topic within dermatology as specific conditions can be harder to diagnose effectively in darker skin, and patients' treatment can be compromised by this. *Clinical Cases in Skin of Color: Adnexal, Inflammation, Infections, and Pigmentary Disorders* is a concise resource with practical guidance for board certified dermatologists and dermatologists in training.

High-quality clinical photos help make this a comprehensive yet succinct overview of the subject which can be used as a 'bedside' companion.
