This book, written by him after undertaking deep research, offers new directions and suggestions to the readers of today.

Dalit literature particularly fiction, autobiography and poetry has emerged as a vital modern literary force in India. The scope and richness of this literature is brilliantly exemplified by novels like Fakira which is the landmark novel in the foundation of Dalit literature in India. Authors like Anna Bhau Sathe illustrate experiences of caste discrimination, untouchability, and Dalit subjugation. The undaunted and ceaseless battle of the protagonist Fakira for the collective welfare of his community forms the core of the narrative. He revolts against the rural orthodox caste system and the British Raj to save his village from utter starvation, humiliation and death.

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. We have represented this book in the same form as it was first published. Hence any marks seen are left intentionally to preserve its true nature.

This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Written by an eminent authority from the American Academy of Neurology's Committee on Ethics, Law, and Humanities,

this book is an excellent text for all clinicians interested in ethical decision-making. The book features outstanding presentations on dying and palliative care, physician-assisted suicide and voluntary active euthanasia, medical futility, and the relationship between ethics and the law. New chapters in this edition discuss how clinicians resolve ethical dilemmas in practice and explore ethical issues in neuroscience research. Other highlights include updated material on palliative sedation, advance directives, ICU withdrawal of life-sustaining therapy, gene therapy, the very-low-birth-weight premature infant, the developmentally disabled patient, informed consent, organizational ethics, brain death controversies, and fMRI and PET studies relating to persistent vegetative state.

The third in a trilogy of books about the Coleman family. Daniel and Martha continue to run their own businesses during the Great War but Martha discovers that she is addicted to the sensations she experiences when she murders her victims. Lucy Renwick is still on her list as a potential victim and this book sees her come ever closer to her desire. Daniel is falling in love with a girl who is forbidden to him when he discovers their real relationship. Will Lucy survive and will Daniel understand that he has to stop playing with fire?

"This publication provides recommendations to a State for the nuclear security of nuclear or other radioactive material that has been reported as being out of regulatory control, as well as for material that is lost, missing or stolen but has not been reported as such, or has been otherwise discovered. It includes recommendations for the detection and assessment of alarms and alerts and for a graded response to criminal or unauthorized acts with nuclear security implications involving nuclear or other radioactive material out of regulatory control. The recommended actions cover the confirmation of a credible threat, assessment and interdiction of an attempted act and response to a nuclear security event."--Page 4 of cover.

The Essence of Buddhism By Sir Edwin Arnold and Ernest M. Bowden

Advocacy is a broad term that covers activities aimed at increasing attention, awareness, information, nursing, treatment, and support to improve the outcome of patients. These actions can be focused directly towards patients or indirectly via third parties. Although advocacy is present in all medical specialties, neurology in particular finds itself in need of strong advocacy tools as the diagnosis, treatment, long-term care and associated resource, and social issues have become increasingly complex. While some physicians implicitly or explicitly act as advocates, there is a lack of holistic research in order to clarify the meaning of advocacy along with concrete methods and strategies. Advocacy in Neurology provides an integrated approach to the concept of advocacy in neurology. Structured in five sections, the book begins by explaining the term "advocacy" in general before elaborating on the areas of interest within neurology. The text goes on to offer concrete strategies and tools for clinicians to deploy advocacy in their daily work, and then discusses specific neurological diseases to point out and explain where advocacy is, or could be, beneficial.

The book ends with an outlook, presentation of results, and an ending conclusion. Advocacy in Neurology offers a practical perspective on advocacy activities in neurology, aiming to show when and why they are important for neurology.

The “intimate and affecting” novel of an Indian couple’s quest for a child that sparked national conversations about cast and female empowerment (Laila Lalami, New York Times Book Review). Set in South India during the British colonial period, *One Part Woman* tells the story of Kali and Ponna, a married couple unable to conceive. The predicament is of major concern for their families—and the crowing amusement of Kali’s male friends. From making offerings at different temples to circumambulating a mountain supposed to cure barren women, Kali and Ponna try everything to solve the problem. But a more radical plan is required. The annual chariot festival, a celebration of the god Maadhorubaagan, who is part male and part female, may provide the answer. On the eighteenth night of the festival, the rules of marriage are relaxed, and consensual sex between unmarried men and women is overlooked, for all men are considered gods. The festival may be the solution to Kali and Ponna’s problem, but it soon threatens to drive the couple apart as much as to bring them together. Wryly amusing and deeply poignant, *One Part Woman* is a powerful exploration of a loving marriage strained by the expectations of others, and an attack on the rigid rules of caste and tradition that continue to constrict opportunity and happiness. Longlisted for the National Book Award

This book intends to focus on network protocol and communication in the area of information and industrial control. Various research on sub-layer protocols including Data Link Layer (DLL), Application Layer (AL) and User Layer (UL) in instrumentation network and TCP/IP, Web based protocol for industrial and informatic network and control problems involving network communication, along with the design of corresponding system are presented explicitly. The main objective of this book is to provide information on some latest research on some mainstream network protocols used in industry, including fundamental concepts and principles, latest technological developments, and as the main part, theoretical and practical research results ever accomplished.

Charles Dickens, who was born in 1812, is considered one of the greatest of English novelists. Certainly he is the most popular. Not only did he have an important place in nineteenth-century literature, but he was also an outspoken and influential critic of society. He wrote fifteen novels as well as a number of stories and Christmas books. In lots of these children were important characters. In his day, no one understood children better than Dickens, and he was the first writer to describe what children thought and felt and to capture the way they spoke. And he was not afraid to write about the hard and sad lives that many children led. In the stories in this book, which have been retold by Charles Dickens's granddaughter, Mary Angela Dickens, you will meet some of the children who appear in the works of Charles Dickens. There is *Oliver Twist*, who had many misadventures after he escaped from the terrible workhouse where he was born, and *David Copperfield*, the hero of Dickens's most popular novel, much of which records his own experiences. *Little Paul Dombey* is the young son of *Dombey and Son*, and *Amy* is the heroine of *Little Dorrit*. On these pages, you'll also make the acquaintance of *Tiny Tim*, from *A Christmas Carol*, the fat boy from *The Pickwick Papers*, *Jenny Wren* from *Our Mutual Friend*, and the blind little toymaker from *The Cricket on the Hearth*, and *Little Nell* and the

marchioness from The Old Curiosity Shop. Howard Copping's wonderful paintings and drawings bring Dickens's fascinating characters, both young and old, to life.

In Turkey, Iran, Iraq, and Syria, central governments historically pursued mono-nationalist ideologies and repressed Kurdish identity. As evidenced by much unrest and a great many Kurdish revolts in all these states since the 1920s, however, the Kurds manifested strong resistance towards ethnic chauvinism. What sorts of authoritarian state policies have Turkey, Iraq, Iran and Syria relied on to contain the Kurds over the years? Can meaningful democratization and liberalization in any of these states occur without a fundamental change vis-à-vis their Kurdish minorities? To what extent does the Kurdish issue function as both a barrier and key to democratization in four of the most important states of the Middle East? While many commentators on the Middle East stress the importance of resolving the Arab-Israeli dispute for achieving 'peace in the Middle East,' this book asks whether or not the often overlooked Kurdish issue may constitute a more important fulcrum for change in the region, especially in light of the 'Arab Spring' and recent changes in Turkey, Iraq, Iran and Syria.

Volume is indexed by Thomson Reuters CPCI-S (WoS). This collection of peer-reviewed papers provided a forum within which researchers, educators, engineers and government officials - involved in the general areas of Environmental Biotechnology and Materials Engineering - could disseminate their latest research results and exchange views on possible future research directions. The 473 most outstanding papers were carefully selected from among the total of 783 submitted works and are presented in this special collection, which covers a wide range of issues related to the state-of-the-art of the progress, made in environmental biotechnology and materials engineering, with regard to the understanding and optimization of various types of treatment process. Model-Driven Development (MDD) has become an important paradigm in software development. It uses models as primary artifacts in the development process. This book provides an outstanding overview as well as deep insights into the area of model-driven development of user interfaces, which is an emerging topic in the intersection of Human-Computer-Interaction and Software-Engineering. The idea of this book is based on the very successful workshop series

of “Model-Driven Development of Advanced User Interfaces (MDDAUI)”. It has been written by the leading researchers and practitioners in the field of model-driven development of user interfaces and offer a variety of solutions and examples for

- Architectures and environments for the generation of user interfaces
- User interface development for specific domains and purposes
- Model-driven development in the context of ambient intelligence
- Concepts supporting model-driven development of user interfaces

From Plassey to Partition is an eminently readable account of the emergence of India as a nation. It covers about two hundred years of political and socio-economic turbulence. Of particular interest to the contemporary reader will be sections such as Early Nationalism: Discontent and Dissension , Many Voices of a Nation and Freedom with Partition . On the one hand, it converses with students of Indian history and on the other, it engages general and curious readers. Few books on this crucial period of history have captured the rhythms of India s polyphonic nationalism as From Plassey to Partition.

The Lal Kitab, a rare book in urdu, was popular in north-west India, Pakistan, Iran and many other countries. This English version has added new dimensions to make it more lucid and easier to understand.

Tropical neurology refers to those diseases of the nervous system which prevail in between the Tropics of Cancer and Capricorn. Developments in speed and ease of travel and globalisation of economy have resulted in large scale migration rendering the boundaries of tropical regions less distinct. Wars, famines, natural disasters and economic sanctions have added to the problem of infection and aggravated the preexisting nutritional deficiency disorders in many tropical countries. This book is aimed at residents, practicing physicians, health workers and physicians from western countries who are visiting the tropical countries.
