Cost management of all building projects has become increasingly important as clients in the public and private sector demand the highest quality cost planning services with accurate budgeting and cost control. All members of the design team must integrate their activities to ensure that a high quality project is delivered on time and within budget. This book considers building cost planning and cost control from the client and the design team's perspective, where all decisions whether concerned with design, cost, quality, time, value or sustainability are taken as being interrelated. The latest Royal Institute of British Architects (RIBA) Plan of Work and the New Rules of Measurement for Early Stage Estimating and Cost Planning issued by the Royal Institution of Chartered Surveyors (RICS) have been incorporated into this new text. The book follows the building design cost planning process from the crucial inception stages and then through all the design stages to the completion of the technical design, contract documentation and the tender. It provides a template for good cost planning practice. An essential addition to this third edition is the introduction of integrated design and documentation processes captured in building Information modelling (BIM), on-line cost databases and computerised methods of cost planning. The integrated approaches are explained and provide vital information and knowledge for practitioners involved in building projects. All stakeholders involved in development and design and client teams in public and private sector policy making and implementation need to understand the new approaches to design management processes and how cost planning and design approaches are adapting to using the new technology in practice. Confabulation is a drawing together through storytelling. Fundamental to our perception, memory, and thought is the way we join fractured experiences to construct a narrative. Confabulations: Storytelling in Architecture weaves together poetic ideas, objects, and events and returns you to everyday experiences of life through juxtapositions with dreams, fantasies, and hypotheticals. It follows the intellectual and creative framework of architectural cosmopoiesis developed and practiced by the distinguished thinker, architect, and professor Dr. Marco Frascari, who thought deeply about the role of storytelling in architecture. Bringing together a collection of 24 essays from a diverse and respected group of scholars, this book presents the convergence of architecture and storytelling across a broad temporal, geographic, and cultural range. Beginning with an introduction framing the topic, the book is organized along a continuous thread structured around four key areas: architecture of stories, stories of architecture, stories of theory and practice of stories. Beautifully illustrated throughout and including a 64-page full colour section, Confabulations is an insightful investigation into architectural narratives.

Not illustrated. 1920 edition. Excerpt: ...a board will go far toward making a class problem successful. Often the students need only the suggestion of how others have worked similar problems, to work out their own successfully. The teacher should post the material in a pleasing way on the reference board. Careless and unbalanced arrangement is sure to create a similar impression upon the students in their own arrangement. BRUSH DRILLS. Practice with the brush should be continued by the students until they can produce good light and heavy lines in clear, confident strokes. Brush drills showing continuous connecting curved lines in a designed form create rhythmic brush rendering, and other patterns and strokes can be developed to create facility with the brush. The making of a long stem with increasing thickness toward the bottom, and a series of radiating leaves made with single brush strokes, gives the combination drill in the use of the finest line with the heaviest strokes the brush will produce. of paste and the possibility of students' having paste on their own desks and thus soiling other work. The paste in tubes is the best form for individual use, since just what is needed is used, and the screw top is placed back when the paste is not in use. Have the students learn to use the paste tube correctly. It should be pressed from the bottom, not near the top. As it is emptied at the bottom, the bottom can be rolled up. Where a straight edge of paste surface is needed, if a straight strip of thin paper is laid down along the edge to which the paste is to come, when the paste is brushed, the strip will take the surplus paste. When the strip is removed, the pasted part...

It is all too easy to assume that social service programs respond to homelessness, seeking to prevent and understand it. *The Value of Homelessness*, however, argues that homelessness today is an effect of social services and sciences, which shape not only what counts as such but what will?or ultimately won't?be done about it. Through a history of U.S. housing insecurity from the 1930s to the present, Craig Willse traces the emergence and consolidation of a homeless services industry. How to most efficiently allocate resources to control ongoing insecurity has become the goal, he shows, rather than how to eradicate the social, economic, and political bases of housing needs. Drawing on his own years of work in homeless advocacy and activist settings, as well as interviews conducted with program managers, counselors, and staff at homeless services organizations in New York, Los Angeles, San Francisco, and Seattle, Willse provides the first analysis of how housing insecurity becomes organized as a governable social problem. An unprecedented and powerful historical account of the development of contemporary ideas about homelessness and how to manage homelessness, *The Value of Homelessness* offers new ways for students and scholars of social work, urban inequality, racial capitalism, and political theory to comprehend the central role of homelessness in governance and economy today.

Jugendstil, that is Germany's distinct engagement with the international Art Nouveau movement, is now firmly engrained in histories of modern art, architecture and design. Recent exhibitions and publications across the world explored Jugendstil's key protagonists and artistic centres to firmly anchor their activities within the trajectories of German modernism. Women, however, continue to be largely absent from these revisionist accounts. *Jugendstil Women and the Making of Modern Design* argues that women in fact actively participated in the cultural and socio-economic exchanges that generated German design responses to European modernity. By drawing on previously unpublished archival material and a series of original case studies including Elsa Bruckmann's Munich salon, the Photo Studio Elvira and the Debschitz School, the book explores women's important contributions to modern German culture as collectors, consumers, critics, designers, educators, and patrons. This book offers a new interpretation of this vibrant period by considering diverse manifestations of historical female agency that pushed against historically entrenched conventions

and gender roles. The book's rigorous approach reshapes Jugendstil historiography by positing women's lived experiences against dominant ideologies that emerged at this precise moment. In short, the book advocates women as an integral part of the emergence, dissemination and reception of Jugendstil and questions the deeply gendered histories of this key period in modern art, architecture and design.

Triant Flouris is a prominent academic and administrator in aviation management education; Dennis Lock has more than forty years experience in practising, lecturing and writing about project management. When these two experts combined their considerable talents to write their earlier book Aviation Project Management, it was little wonder that distinguished reviewers gave generous praise and acclaimed it as a welcome addition to what, until then, had been a neglected field. That first title was structured as an essential primer for managers and students. The authors have now written this more in-depth book for managers and students who need to study aviation project management in much greater detail, as well as critically connect project management within an aviation context to prudent business decision-making. Aviation project management is described in

considerable detail throughout all stages of a lifecycle that begins when the project is only a vague concept and does not end until the project has been successfully completed, fully documented, and put into operational service. Aviation projects have commonly failed to deliver their expected outcomes on time and have greatly exceeded their intended budgets. Many of those failures would have been prevented if the project managers had adhered to the sound principles of project management, as described and demonstrated throughout this book.

Challenging the conventional narrative that the European Union suffers from a "democratic deficit," Athanasios Psygkas argues that EU mandates have enhanced the democratic accountability of national regulatory agencies. This is because EU law has created entry points for stakeholder participation in the operation of national regulators; these avenues for public participation were formerly either not open or not institutionalized to this degree. By focusing on how the EU formally adopted procedural mandates to advance the substantive goal of creating an internal market in electronic communications, Psygkas demonstrates that EU requirements have had significant implications for the nature of administrative governance in the member states. Drawing on theoretical arguments in favor of decentralization traditionally applied to substantive policy-making, this book provides insight into regulatory processes to show how the decentralized EU structure may transform national regulatory authorities into individual loci of experimentation that might in turn develop innovative results. It thus contributes to debates about federalism, governance and public policy, as well as about deliberative and participatory democracy in the United States and Europe. This book informs current understandings of regulatory agency operations and institutional design by drawing on an original dataset of public consultations and interviews with agency officials, industry and consumer group representatives in Paris, Athens, Brussels, and London. The on-the-ground original research provides a strong foundation for the directions the case law could take and small- and larger-scale institutional reforms that balance the goals of democracy, accountability, and efficiency.

Architecture is conventionally seen as being synonymous with building. In contrast, this book introduces and defines a new category - the unbuildable. The unbuildable involves projects that are not just unbuilt, but cannot be built. This distinct form of architectural project has an important and often surprising role in architectural discourse, working not in opposition to the buildable, but frequently complementing it. Using well-known examples of early Soviet architecture – Tatlin's Tower in particular – Nerma Cridge demonstrates the relevance of the unbuildable, how it relates to current notions of seriality, copying and reproduction, and its implications for contemporary practice and discourse in the computational age. At the same time it offers a fresh view of our preconceptions and expectations of early Soviet architecture and the Constructivist Movement.
