In this timely new study, Borlik reveals the surprisingly rich potential for the emergent "green" criticism to yield fresh insights into early modern English literature. Deftly avoiding the anachronistic casting of sixteenth- and seventeenth-century authors as modern environmentalists, he argues that environmental issues, such as nature's personhood, deforestation, energy use, air quality, climate change, and animal sentience, are formative concerns in many early modern texts. The readings infuse a new urgency in familiar works by Shakespeare, Sidney, Spenser, Marlowe, Ralegh, Jonson, Donne, and Milton. At the same time, the book forecasts how ecocriticism will bolster the reputation of less canonical authors like Drayton, Wroth, Bruno, Gascoigne, and Cavendish. Its chapters trace provocative affinities between topics such as Pythagorean ecology and the Gaia hypothesis, Ovidian tropes and green phenomenology, the disenchantment of Nature and the Little Ice Age, and early modern pastoral poetry and modern environmental ethics. It also examines the ecological onus of Renaissance poetics, while showcasing how the Elizabethans' sense of a sophisticated interplay between nature and art can provide a precedent for ecocriticism's current understanding of the relationship between nature and culture as "mutually constructive." Situating plays and poems alongside an eclectic array of secondary sources, including herbals, forestry laws, husbandry manuals, almanacs, and philosophical treatises on politics and ethics, Borlik demonstrates that Elizabethan and Jacobean authors were very much aware of, and concerned about, the impact of human beings on their natural surroundings.
The aim of each volume of this series Guides to Information Sources is to reduce the time

which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information. The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it. The series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those sources.

This book challenges a longstanding and deeply ingrained belief in Shakespearean studies that The Tempest—long supposed to be Shakespeare's last play—was not written until 1611. In the course of investigating this proposition, which has not received the critical inquiry it deserves, a number of subsidiary and closely related interpretative puzzles come sharply into focus. These include the play's sources of New World imagery; its festival symbolism and structure; its relationship to William Strachey's True Reportory account of the 1609 Bermuda wreck of the Sea Venture (not published until 1625)—and the tangled history of how and why scholars have for so long misunderstood these matters. Publication of some preliminary elements of the authors' arguments in leading Shakespearean journals (starting in 2007) ignited a controversy that became part of the critical history. This book presents the case in full for the first time.

Following the structure of previous editions, Volume 1 of this Sixth Edition proceeds through four individual chapters on geosynthetics, geotextiles, geogrids and geonets. Volume 2 continues with geomembranes, geosynthetic clay liners, geofoam and geocomposites. The two volumes must accompany one another. All are polymeric materials used for myriad applications in geotechnical, geoenvironmental, transportation, hydraulic and private

development applications. The technology has become a worldwide enterprise with approximate $5B material sales in the 35-years since first being introduced. In addition to describing and illustrating the various materials; the most important test methods and design examples are included as pertains to specific application areas. This latest edition differs from previous ones in that sustainability is addressed throughout, new material variations are presented, new applications are included and references are updated accordingly. Each chapter includes problems for which a solutions manual is available.

This book is far more than just another tutorial or reference guide - it's a tour through the world of analog design, combining theory and applications with the philosophies behind the design process. Readers will learn how leading analog circuit designers approach problems and how they think about solutions to those problems. They'll also learn about the `analog way' - a broad, flexible method of thinking about analog design tasks. A comprehensive and useful guide to analog theory and applications Covers visualizing the operation of analog circuits Looks at how to rapidly determine workable approximations of analog circuit parameters

This study considers how a range of prose texts register, and help to shape, the early modern cultural debate between theoretical and experiential forms of knowledge as centered on the subject of travel.

Through a critical-ecological lens, this book examines how to prepare preservice teachers to be resourceful and responsive practitioners in addressing the intellectual needs of children often labeled as "culturally and linguistically diverse." It explores a comprehensive re-design of a teacher education program grounded in research on the complex factors that affect the teaching and learning of linguistically and culturally diverse children. Re-Designing Teacher Education for Culturally and Linguistically Diverse Students challenges hegemonic cultural and linguistic norms, quantitative and static views of "resources," the impact of U.S. education policy, and the limited attention to the agency, identities, and strategic actions of diverse students and their families.

Renaissance readers perceived the print book as both a thing and a medium - a thing that could be broken or reassembled, and a visual medium that had the

power to reflect, transform, or deceive. At the same historical moment that print books remediated the visual and material structures of manuscript and oral rhetoric, the relationship between vision and perception was fundamentally called into question. Investigating this crisis of perception, Pauline Reid argues that the visual crisis that suffuses early modern English thought also imbricates sixteenth and seventeenth century print materials. These vision troubles in turn influenced how early modern books and readers interacted. Platonic, Aristotelian, and empirical models of sight vied with one another in a culture where vision had a tenuous relationship to external reality. Through situating early modern books' design elements, such as woodcuts, engravings, page borders, and layouts, as important rhetorical components of the text, Reading by Design articulates how the early modern book responded to epistemological crises of perception and competing theories of sight.

This black and white (B&W) Edition of Tropiline Bajan Design (USA Design Patent Des 328198 S) was designed to be of special value to students, artists, and academics. It is about the best modern product design ever to come out of an emerging market and is a major advance in international modern art with cultural, personal, and regional influences all synthesized to produce a masterpiece. It is a single line drawn in space as the essence of the design, like

Malevich's rotated linear squares, Saarinen's St. Louis Arch, and Brancusi's Bird in Space!"Even less is even more" permeates the philosophy, which is an amazing chronology of the creative process, the struggles of innovative artists, perseverance and determination (as the design moves around the world from Barbados, to Denmark, to China); with a challenge to all emerging markets (and communities) to move forward modern progressive principles in an age of increasing globalization and international cooperation. The B&W version has a chiaroscuro that is very powerful allowing the brilliant modern forms throughout the book to emerge purely.

Employing numerous examples of classic British design, Designing Modern Britain delves into the history of British design culture, and thereby tracks the evolution of the British national identity.

Anyone can master the fundamentals of game design - no technological expertise is necessary. The Art of Game Design: A Book of Lenses shows that the same basic principles of psychology that work for board games, card games and athletic games also are the keys to making top-quality videogames. Good game design happens when you view your game from many different perspectives, or lenses. While touring through the unusual territory that is game design, this book gives the reader one hundred of these lenses - one hundred

sets of insightful questions to ask yourself that will help make your game better. These lenses are gathered from fields as diverse as psychology, architecture, music, visual design, film, software engineering, theme park design, mathematics, writing, puzzle design, and anthropology. Anyone who reads this book will be inspired to become a better game designer - and will understand how to do it.

Early manuscripts in the English language include religious works, plays, romances, poetry and songs, as well as charms, notebooks, science and medieval medicine. How did scribes choose to arrange the words and images on the page in each manuscript? How did they preserve, clarify and illustrate writing in English? What visual guides were given to early readers of English in how to understand or use their books?'Designing English' is an overview of eight centuries of graphic design in manuscripts and inscriptions from the Anglo-Saxon to the early Tudor periods. Working beyond the traditions established for Latin, scribes of English needed to be more inventive, so that each book was an

opportunity for redesigning. 'Designing English' focuses on the craft, agency and intentions of scribes, painters and engravers in the practical processes of making pages and artefacts. It weighs up the balance of ingenuity and copying, practicality and imagination in their work. It surveys bilingual books, format, ordinatio, decoration and reading aloud, as well as inscriptions on objects, monuments and buildings.With over ninety illustrations, drawn especially from the holdings of the Bodleian Library in Old English and Middle English, 'Designing English' gives a comprehensive overview of English books and other material texts across the Middle Ages.

#1 NEW YORK TIMES BESTSELLER When and how did the universe begin? Why are we here? What is the nature of reality? Is the apparent "grand design" of our universe evidence of a benevolent creator who set things in motion—or does science offer another explanation? In this startling and lavishly illustrated book, Stephen Hawking and Leonard Mlodinow present the most recent scientific thinking about these and other abiding mysteries of the universe, in nontechnical language marked by brilliance and simplicity. According to quantum theory, the cosmos does not have just a single existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe, and show how quantum theory predicts the "multiverse"—the idea that ours is just one

of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a riveting assessment of M-theory, an explanation of the laws governing our universe that is currently the only viable candidate for a "theory of everything": the unified theory that Einstein was looking for, which, if confirmed, would represent the ultimate triumph of human reason.

"This beautifully illustrated catalogue explores how Georg Jensen silver has expanded the boundaries of modern style, changing the look of twentieth-century homes and spreading Scandinavian design around the world. Design for Everyday Living is the first scholarly treatment of Georg Jensen to approach the firm's output in an analytical way, situating it in the context of twentieth-century design history and focusing on the firm's unique evolution and global influence. This book is geared to a wide audience of interested nonspecialists and design historians rather than to a narrower readership of silver collectors. It is also innovative in that it focuses on the story of the firm rather than solely on the career of its founder. The essays are all original and include a contribution from Thomas Thulstrup, the leading expert on Georg Jensen silver. The book also benefits from a close collaboration with the Jensen firm, which has allowed us access to images and archival materials published here for the first time"--

Providing the most complete record possible of texts by Italian writers active after 1900, this annotated bibliography covers over 4,800 distinct editions of writings by some 1,700 Italian authors. Many entries are accompanied by useful notes that provide information on the authors, works, translators, and the reception of the translations. This book includes the works of Pirandello, Calvino, Eco, and more recently, Andrea Camilleri and Valerio Manfredi. Together with Robin Healey's Italian Literature before 1900 in English Translation, also published by University of Toronto Press in 2011, this volume makes comprehensive information on translations from Italian accessible for schools, libraries, and those interested in comparative literature.

Paying special attention to Sidney's Arcadia, Spenser's Faerie Queene, and Shakespeare's romances, this study engages in sustained examination of chiasmus in early modern English literature. The author's approach leads to the recovery of hidden designs which are shown to animate important works of literature; along the way Engel offers fresh and more comprehensive interpretations of seemingly shopworn conventions such as memento mori conceits, echo poems, and the staging of deus ex machina. The study, grounded in the philosophy of symbolic forms (following Ernst Cassirer), will be a valuable resource for readers interested in intellectual history and symbol theory, classical

mythology and Renaissance iconography. Chiastic Designs affords a glimpse into the transformative power of allegory during the English Renaissance by addressing patterns that were part and parcel of early modern "mnemonic culture."

A weekly review of politics, literature, theology, and art.

The availability of digital editions of early modern works brings a wealth of exciting archival and primary source materials into the classroom. But electronic archives can be overwhelming and hard to use, for teachers and students alike, and digitization can distort or omit information about texts. Teaching Early Modern English Literature from the Archives places traditional and electronic archives in conversation, outlines practical methods for incorporating them into the undergraduate and graduate curriculum, and addresses the theoretical issues involved in studying them. The volume discusses a range of physical and virtual archives from 1473 to 1700 that are useful in the teaching of early modern literature--both major sources and rich collections that are less known (including affordable or free options for those with limited institutional resources). Although the volume focuses on English literature and culture, essays discuss a wide range of comparative approaches involving Latin, French, Spanish, German, and early American texts and explain how to incorporate visual materials, ballads, domestic treatises, atlases, music, and historical documents into the teaching of literature.

Puritan American writers faced a dilemma: they had an obligation to use language as a celebration of divine artistry, but they could not allow their writing to become an iconic graven image of authorial self-idolatry. In this study William Scheick explores one way in which William

Bradford, Nathaniel Ward, Anne Bradstreet, Urian Oakes, Edward Taylor, and Jonathan Edwards mediated these conflicting imperatives. They did so, he argues, by creating moments in their works when they and their audience could hesitate and contemplate the central paradox of language: its capacity to intimate both concealed authorial pride and latent deific design. These ambiguous occasions served Puritan writers as places where the threat of divine wrath and the promise of divine mercy intersected in unresolved tension. By the nineteenth century the heritage of this Christlike mingling of temporal connotation and eternal denotation had mutated. A peculiar late eighteenth-century narrative by Nathan Fiske and a short story by Edward Bellamy both suggest that the binary nature of language exploited by their Puritan ancestors was still a vital authorial concern; but neither of these writers affirms the presence of an eternal denotative signification hidden within the conflicting historical contexts of their apparently allegorical language. For them, appreciation of the mystery of a divine revelation possibly concealed in words yielded to puzzlement over language itself, specifically over the inadequacy of language to signify more than its own instability of design. This book is a tightly focused study of an important aspect of Puritan American writers' use of language by one of the leading scholars in the field of early American literature.

Examines Old English poetry from the point of view of its interpretation, drawing on Anglo-Saxon pictorial art as a model for the interaction of representation and design.

Whether in freezing arctic tundra or blazing deserts, human beings have been figuring out how to adapt to hostile environments for centuries. New challenges emerge, however, as we venture to places where we are truly unable to exist without technology. When it comes to

surviving underwater, a thorough knowledge of human physiology must be combined with a firm grasp of engineering principles, and Life Support Systems Design provides the student with an extensive grounding in both. A reference text for any beginning life support systems engineer, it also serves as a refresher course for more experienced divers. The text particularly emphasizes the effects of hyperbaric exposures on the diver's ability to function, but it also explores underwater physics, including the transport of light, heat, and gases, in detail. It reviews the practical technological aspects of life support system engineering, such as gas storage and delivery systems, and environmental control design. Finally, once the textbook has been absorbed, the authors encourage the student to design a life support system for a specified application. Armed with the knowledge gained from Life Support Systems Design, it seems like a project any student would ace.

Radical reconfigurations in gardening practice in sixteenth- and seventeenth-century England altered the social function of the garden, offering men and women new opportunities for social mobility. While recent work has addressed how middle class men used the garden to attain this mobility, the gendering of the garden during the period has gone largely unexamined. This new study focuses on the developing gendered tension in gardening that stemmed from a shift from the garden as a means of feeding a family, to the garden as an aesthetic object imbued with status. The first part of the book focuses on how practical gardening books proposed methods for planting as they simultaneously represented gardens increasingly hierarchized by gender. The second part of the book looks at how men and women appropriated aesthetic uses of actual gardening in their poetry, and reveals a parallel gendered tension there. Munroe analyzes garden representations in the writings of such manuals writers as Gervase Markham,

Thomas Hill, and William Lawson, and such poets as Edmund Spenser, Aemilia Lanyer and Lady Mary Wroth. Investigating gardens, gender and writing, Jennifer Munroe considers not only published literary representations of gardens, but also actual garden landscapes and unpublished evidence of everyday gardening practice. She de-prioritizes the text as a primary means of cultural production, showing instead the relationship between what men and women might imagine possible and represent in their writing, and everyday spatial practices and the spaces men and women occupied and made. In so doing, she also broadens our outlook on whom we can identify and value as producers of early modern social space.

Innovation has replaced stereotypical and old methods as an attempt to make English language teaching and learning appealing, effective, and simple. However, teaching a second language through literature may be a paramount tool to consolidate not only students? lexical and grammatical competences, but also for the development of their cultural awareness and broadening of their knowledge through interaction and collaboration that foster collective learning. Despite past difficulties, literature?s position in relation to language teaching can be revendicated and revalued. Using Literature to Teach English as a Second Language is an essential research publication that exposes the current state of this methodological approach and observes its reverberations, usefulness, strengths, and weaknesses when used in a classroom where English is taught as a second language. In this way, this book will provide updated tools to explore teaching and learning through the most creative and enriching manifestations of one language ? literature. Featuring a range of topics such as diversity, language learning, and plurilingualism, this book is ideal for academicians, curriculum designers, administrators, education professionals, researchers, and students.

Early modern printed books are copiously illustrated with charts, diagrams, and other kinds of images that represent systems of thought and ways of doing things. Visual Rhetoric and Early Modern English Literature shows how these images fostered what Elizabeth Eisenstein called brainwork related to concepts of space, truth, art, and nature, and reveals their importance to poetry by Andrew Marvell and John Milton, and Aphra Behn's Oroonoko. The genres of illustration considered in this book include military strategy and tactics, garden design, instrumentation, Bibles, scientific schema, drawing instruction, natural history, comparative anatomy, and Aesop's Fables. The argument produces unique insights into the ways in which

visual rhetoric affected verbal expression, and the book develops novel methods of using printed images as evidence in the interpretation of the rich, strange, and beautiful literature of early modern England.

Between 1660 and 1820, Great Britain experienced significant structural transformations in class, politics, economy, print, and writing that produced new and varied spaces and with them, new and reconfigured concepts of gender. In mapping the relationship between gender and space in British literature of the period, this collection defines, charts, and explores new cartographies, both geographic and figurative. The contributors take up a variety of genres and discursive frameworks from this period, including poetry, the early novel, letters, and laboratory notebooks written by authors ranging from Aphra Behn, Hortense Mancini, and Isaac Newton to Frances Burney and Germaine de Staël. Arranged in three groups, Inside, Outside, and Borderlands, the essays conduct targeted literary analysis and explore the changing relationship between gender and different kinds of spaces in the long eighteenth century. In addition, a set of essays on Charlotte Smith's novels and a set of essays on natural philosophy offer case studies for exploring issues of gender and space within larger fields, such as an author's oeuvre or a particular discourse. Taken together, the essays demonstrate space's agency as a complement to historical change as they explore how literature delineates the gendered redefinition, occupation, negotiation, inscription, and creation of new spaces, crucially contributing to the construction of new cartographies in eighteenth- and early nineteenth-century England.

Across the realms of multimedia production, information design, web development, and usability, certain truisms are apparent. Like an Art of War for design, this slim volume contains
