Mohammad Dastbaz

Designing Interactive Multimedia Systems Mohammad Dastbaz,2002 This work provides both a theoretical background and practical guidelines in the area of design and developments of interactive multimedia systems. It consists of examples and sample case studies taking the reader through the design and development process steps. The theoretical backbone of the book includes discussion of HCI, particularly user interface design, and other related issues such as usability engineering. The practical issues it looks at include: media integration issues; hypermedia design models; multimedia authoring tools, and the design and development process. The book also includes demo versions of authoring tools and galleries of developed products to give the student insight into what is possible through multimedia.

Intelligent Interactive Multimedia Systems and Services Ernesto Damiani,Robert J. Howlett,Lakhmi C. Jain,Luigi Gallo,Giuseppe De Pietro,2015-06-09 Intelligent interactive multimedia systems and services will be ever more important in computer systems. Nowadays, computers are widespread and computer users range from highly qualified scientists to non-computer expert professionals. Therefore, designing dynamic personalization and adaptivity methods to store, process, transmit and retrieve information is critical for matching the technological progress with the consumer needs. This book contains the contributions presented at the eighth international KES conference on Intelligent Interactive Multimedia: Systems and Services, which took place in Sorrento, Italy, June 17-19, 2015. It contains 33 peer-reviewed scientific contributions that focus on issues ranging from intelligent image or video storage, retrieval, transmission and analysis to knowledge-based technologies, from advanced information technology architectures for video processing and transmission to advanced functionalities of information and knowledge-based services. We believe that this book will serve as a useful source of knowledge for both academia and industry, for all those faculty members, research scientists, scholars, Ph.D. students and practitioners, who are interested in fundamental and applied facets of intelligent interactive multimedia.

Interactive Multimedia Learning Environments Max Giardina,2012-12-06 Multimedia environments suggest to us a new perception of the state of changes in and the integration of new technologies that can increase our ability to process information. Moreover, they are obliging us to change our idea of knowledge. These changes are reflected in the obvious synergetic convergence of different types of access, communication and information exchange. The multimedia learning environment should not represent a passive object that only contains or assembles information but should become, on one

side, the communication medium of the pedagogical intentions of the professor/designer and, on the other side, the place where the learner reflects and where he or she can play with, test and access information and try to interpret it, manipulate it and build new knowledge. The situation created by such a new learning environments that give new powers to individuals, particularly with regard to accessing and handling diversified dimensions of information, is becoming increasingly prevalent in the field of education. The old static equilibrium, in which fixed roles are played by the teacher (including the teaching environment) and the learner, is shifting to dynamic equilibrium where the nature of information and its processing change, depending on the situation, the learning context and the individual's needs.

Designing Interactive Multimedia Arch C. Luther, 1992 This timely reference presents a step-by-step approach to maximizing the use of existing desktop PC systems in order to harness the power of multimedia through technology hardware and software developed by IBM and Intel.

Principles of Interactive Multimedia Mark Elsom-Cook, 2001 *Principles of Interactive Multimedia* introduces all the contributory fields that are necessary for informed, thoughtful design and development of multimedia systems to be delivered through CD, the web or other mechanisms. It adopts an inter-disciplinary approach. The focus is to explain the basics of all the contributing disciplines to the design of systems. The book equips readers to think about multimedia issues, at the same time as they are learning and applying skills. It will encourage development, innovation and creative operation using the

tools of multimedia. Multimedia workers operate in teams with differing skills, and this book will give each member of the team an understanding of the skills of the rest of the team and hence a means of communicating with them effectively. It is closely related to the needs of practice and the real world, while being leading edge in what it proposes. Written by an Author with many years' experience as lecturer and practitioner in multimedia applications, the book focuses on the underpinning models behind multimedia. Hitherto, practice has been to teach the material primarily as skill-based, with comparatively little theory of any sort, and no integrated theory at all. The subject is now reaching the level of maturity where such theory is being recognised as essential to the provision of adequate courses as an academic discipline. The book provides this integrated theoretical base by focussing on interaction as the key to system design, and particularly by using linguistic models to underpin a communication interpretation of multimedia. This unification is unique, but has been used with students over several years and is well received by those from both science and arts backgrounds. It has been positively received by other academics who have seen it.

Design and Production of Multimedia and Simulation-based Learning Material Ton de Jong, L Sarti, 2012-12-06 This volume results from a meeting that was held in Barcelona, Spain, April 1993, under the auspices of the DELTA programme of the European Commission. DELTA (Developing European Learning through Technological Advance) is the commission's technology R&D programme that concentrates on Telematic Systems for Flexible and Distance Learning. The overarching goal of this programme is to contribute through information technology to more efficient and effective design, production, and delivery of learning material. The DELTA programme started its main phase in 1992 with a total of 22 projects and a total budget of 92.4 million ECU. In the meanwhile an extension of the programme has resulted in 8 extensions of existing projects and 8 new projects, bringing the number of projects to 30, with a corresponding total budget of 99.9 million ECU. The programme has three main areas: telecommunication, delivery information systems, and design and production. In the projects, in total 201 organisations (industrial, commercial, and universities) from 12 European Union member states and 5 EFTA countries are represented. The DELTA programme pays much attention to the exchange of ideas and dissemination of information both between individual DELTA projects and between DELTA projects and other initiatives in the EU. Meetings in which DELTA projects are involved are held several times a year as so-called 'concertation meetings', meetings where also non-DELTA projects participate are called 'concerted actions'.

Interactive Multimedia Ioannis Deliyannis, 2012-03-07 Interactive multimedia is clearly a field of fundamental research, social, educational and economical importance, as it combines multiple disciplines for the development of multimedia systems that are capable to sense the environment and dynamically process, edit, adjust or generate new content. For this purpose, ideas, theories, methodologies and inventions are combined in order to form novel applications and systems. This book presents novel scientific research, proven methodologies and interdisciplinary case studies that exhibit advances under

Interfaces and Interaction, Interactive Multimedia Learning, Teaching and Competence Diagnosis Systems, Interactive TV, Film and Multimedia Production and Video Processing. The chapters selected for this volume offer new perspectives in terms of strategies, tested practices and solutions that, beyond describing the state-of-the-art, may be utilised as a solid basis for the development of new interactive systems and applications.

Design and Management of Multimedia Information Systems: Opportunities and Challenges Syed, Mahbubur Rahman, 2000-07-01 Multimedia technology has the potential to transform end user computing from interactive text and graphics models into something more compatible with the digital and electronic world of the new century. This book aims to help technology professionals gain an understanding and perspective on areas related to multimedia computing and communication, while addressing the major issues and challenges in the design and management of multimedia information systems.

Introduction to Multimedia Systems Gaurav Bhatnagar, Shikha Mehta, Sugata Mitra, 2002 Introduction to Multimedia Systems is designed to be a general introduction to the broad field of multimedia... more specifically digital interactive multimedia. The editors have included topics such as the principles of multiple and media, including sound, two-dimensional and three-dimensional graphics, animation, and text. All of these elements are stitched together by the programmer, or multimedia designer, based on the conceptualization of the designer. In order to take full advantage of the potential for a wide array of multimedia applications it is important to have a broad understanding of the principles of various media. The person preparing a multimedia package, which may include such media as sound, computer graphics, and software, will most likely have a strong background in only one or perhaps none of the media to be used. Introduction to Multimedia Systems has been developed to be the first place to turn, both as an introductory textbook or as a professional reference for anyone diving into multimedia preparation. Multimedia is first and foremost a medium of communication. In order to take advantage of the nearly unlimited potential provided by digital environments a full survey of multimedia capabilities is covered in this book. Website Feature: Learning by doing! The editors currently use the book in combination with a wide array of sample software and weblinks for students to learn how to build by example. Each part of the book will have a direct link to a publicly accessible website that will maintain these available software tools. The weblinks will be updated as software versions advance, and most of the software involves demo or scaled down versions of commercially available multimedia design software/editing tools. This is a carefully written and edited book specifically designed to be a general introduction to the broad field of multimedia Covers all the general topics of multimedia namely the principles of 'multiple' and 'media', including sound, 2D and 3D graphics, animation and text
