Asthma is one of the most important chronic disorders in the developed world. Evidence from around the world shows the prevalence of asthma has increased considerably since 1975, and now affects around 7.2% of the world population (about 100 million individuals). In the UK asthma is now the most common chronic disease affecting all age groups with approximately 11% of the population being diagnosed as having asthma at some time in their lives. Understanding of the basic mechanisms involved in the pathogenesis of asthma has improved dramatically over the past 20 years. Along with this increase in basic scientific knowledge, randomized clinical trials have produced evidence to guide clinicians in how to manage patients with asthma. The book covers epidemiology, diagnosis and management, and takes a look at future developments. The authors highlight the under diagnosis of occupational asthma and emphasize the importance of effective patient education, particularly asthma action plans. There are ten clinical cases dealing with common diagnostic and management problems, frequently asked questions and appendices containing resources for patients and clinicians including useful websites, information leaflets and major references.

It has been a very interesting life, both professional and personal. After going to six different high schools (including summer school), I never graduated. My goal in life from an early age was to be an automotive engineer. In my senior year of high school with no chance of graduating, I abandoned that goal. One of my teachers, after hearing of my dreams falling apart, worked with me and got me into a fantastic engineering school without needing to complete high school. This was in 1962. Over the years, I completed my master's level in mechanical, electrical, and systems engineering and in computer science. Almost all of my career was in planning for and developing future technologies of many types. A few years ago, while at a resort in Sint Maarten, I met another couple and the man asked me what I did and turned out that both of us were engineers. He then asked what kind of work I did and with what companies, and when I replied, he practically shouted, "Oh my god, you are that Lee Armstrong! I researched and studied everything I could find that you wrote and did." My first

marriage was good at first, but then she started an affair with a man just getting out of prison for murdering his wife. I tried to get her to end it, including moving to a different state. She even said, "Why can't you just share me?" My second wife was incredible (she passed as this was being prepared for printing). After forty years of marriage, I still had a hard, passionate love for her; we were not just a couple. For a long time, my work took me all over the world. She started to come with me, and we would usually spend another week or two as vacation time. I was consulting, so I could work anywhere, even on that tropical beach. Between work and pleasure, for many years, we averaged six months a year away from home, averaged for about fifteen years, going to five different countries each year. 20
