This text reflects on the effect of the development community's major shift in focus from market-based frameworks to a rights-based one. The contributors reflect on their experience with rights-based development activities.

Revolutionary socialist movements have held out the promise, in both theory and practice, that women can achieve liberation through their participation in the revolutionary process. But many women in post-revolutionary societies have watched in frustration as this promise has been pushed into the future or dropped from the agenda altogether. The essays in Promissory Notes renew the debate about the connections between feminism and socialism by examining the position of women in socialist thought from the time of Marx to the present. The book looks at the central theoretical formulations of the "Woman Question" in classical Marxist thought, then explores their applications first in the Soviet Union and China, then in a series of third world regimes and contemporary Eastern European countries. The volume ends with a roundtable debate in which a number of scholars and activists take up the central theoretical issues raised throughout the book. Contributors include Joan B. Landes, Elizabeth Waters, Wendy Zeva Goldman, Christina Gilmartin, Muriel Nazzari, Maxine D. Molyneux, Sonia Kurks and Ben Wisner, Christine Pelzer White, Amrita Basu, Marilyn B. Young, Mary Buckley, Barbara Einhorn, Martha Lampland, Lourdes Beneria, Zillah Eisenstein, Delia D. Aguilar, Delia Davin, Kumari Jayawardena, and Rayna Rapp.

The theme of this work, first published in 1985, is the exchange between issues of development and problems of social theory. They provide preliminary analysis of the multiplicity of social-theoretic arguments in development theory and their implications for social theory in general. The book will be of interest to all those interested in the contemporary 'restructuring' of social theory and to theorists of development who are rethinking their concerns in a period of pessimism and doubt.

Clear, accessible and concise, this is an ideal primer for students unfamiliar with the central themes and theoretical perspectives in the study of development.

In recent years, much mainstream development discourse has sought to co-opt and neutralize key concepts relating to empowerment, participation, gender, sustainability and inclusivity in order to serve a market-driven, neoliberal agenda. Critical development studies now play a crucial role in combatting this by analyzing the systemic changes needed to transform the current world to one where economic and social justice and environmental integrity prevail. The Essential Guide to Critical Development Studies takes as its starting point the multiple crises – economic, political, social and environmental – of the dominant current global capitalist system. The chapters collectively document and analyze these crises and the need to find alternatives to the system(s) that generate them. To do so, analyses of class, gender

and empire are placed at the centre of discussion, in contrast to markets, liberalization and convergence, which characterize mainstream development discourse. Each contributor supplements their overview with a guide to the critical development studies literature on the topic, thereby providing scholars and students not only with a precis of the key issues, but also a signpost to further readings. This is an important resource for academics, researchers, policymakers and professionals in the areas of development studies, political science, sociology, economics, gender studies, history, anthropology, agrarian studies, international relations and international political economy.

From Individual to Community brings together a set of papers that provides critical commentaries on various facets of the ongoing process of development. The book addresses issues that concern developing countries—such as globalization, economic growth, rural transformation, gender equality, educational reforms and the Dalit movement—from a multidisciplinary perspective. Based on the theoretical framework of the normative principles, the book evaluates issues that are specifically relevant in the Indian context—rich versus poor, globalization versus sustainable development, and so on. Devoid of any ideological rigidity, this book is an unbiased exposition of the material as well as ideological positioning of globalization, development and change. This book also commemorates the birth centenary of Professor Malcolm Adiseshiah, former Deputy Director General of UNESCO and a Padma Bhushan awardee, who was also founder of Madras Institute of Development Studies.

Cambridge IGCSE Development Studies has been specially written for Cambridge IGCSE Development Studies Syllabus (0453). Written in a clear and accessible style, the book offers comprehensive coverage with an international perspective and in-depth analysis of all topics. Designed for class use and independent study, the book equips students with the skills needed to succeed in examination.

Examines the concepts that have powerfully influenced development policy and more broadly looks at the role of ideas in international development institutions and how they have affected current development discourse.

This textbook helps students understand the fundamentals of development studies by adopting a multi-disciplinary approach. Introduction to Development Studies presents a balanced mix of economic, social, political, cultural and administrative premises of development and analyses its theoretical and practical dimensions. Through preceding and contemporary examples from developing countries, it provides a holistic understanding of development, effectively demonstrating how it differs from economic growth. Beginning with development theories, paradigms and actors involved in the development process, this book goes on to explain the concepts of development governance, management, communication and planning. It would prove to be an indispensable companion to students of economics, sociology, political science, public administration, public policy and other social science disciplines. Key Features - Presents an exhaustive treatment of 'development' from theoretical and practical perspectives - Covers three key aspects of contemporary development--development governance, development administration and development communication - Provides accessible and thematic explanation of the core concepts to engage students with/from various disciplinary backgrounds

Development theory in the past decade has met with increasingly heavy criticism. Dependency theories, as well as modes of production and world-system approaches, have come to be considered as internally inconsistent and inadequate for explaining the increasing diversity and unevenness of the Third World. This book confronts the theoretical impasse which many feel has been reached. Development scholars from various disciplines review recent changes in research priorities, procedures and orientations, and detect the emergence of new and diverse lines of theoretical development in the field. In particular, they deal with the important meta-theoretical, political, cultural and ethical questions that have come to the fore.

Participatory Rural Appraisal (PRA) methods, now known as Participatory Learning and Action (PLA), have been extensively used in development research, action and evaluation. This book is based on the author's decade-long intensive field experience—each method is explained by drawing on field-based illustrations. The book vividly describes the methods of PRA, highlighting the essential features as well as the application, merits and limitations of each method. *Participatory Rural Appraisal: Principles, Methods and Application* outlines the application of PRA methodology in areas like participatory poverty assessment, sustainable livelihood analysis, assessment of hunger, vulnerability analysis, organizational analysis, monitoring and evaluation. Separate sections on SWOT analysis and on the method of interview and dialogue are also included in the book. Besides, the author has provided guidelines for sector-wise application of PRA, which would serve as a ready reference for students and practitioners alike. A chapter on the roles of members of a PRA team is another key feature of this book, which would be immensely valuable for students, researchers and academicians working in the areas of social work, rural development, agriculture, and environmental science, and also for NGO workers and trainers and researchers in the development field.

Development studies textbooks and courses have sometimes tended to avoid significant economic content. However, without an understanding of the economic aspects of international development many of the more complex issues cannot be fully comprehended. *Economics and Development Studies* makes the economic dimension of discourse around controversial issues in international development accessible to second and third year undergraduate students working towards degrees in development studies. Following an introductory chapter outlining the connections between development economics and development studies, this book consists of eight substantive chapters dealing with the nature of development economics, economic growth and structural change, economic growth and developing countries, economic growth and economic development since 1960, the global economy and the Third World, developing countries and international trade, economics and development policy, and poverty, equality and development economists, with a tenth concluding chapter. This book synthesizes existing development economics literature in

order to identify the salient issues and controversies and make them accessible and understandable. The concern is to distinguish differences within the economics profession, and between economists and non-economists, so that the reader can make informed judgments about the sources of these differences, and about their impact on policy analysis and policy advice. The book features explanatory text boxes, tables and diagrams, suggestions for further reading, and a listing of the economic concepts used in the chapters.

Although the academic study of development is well established, as is also its policy implementation, less considered are the broader, more popular understandings of development that often shape agendas and priorities, particularly in representative democracies. Through its accessible and provocative chapters, *Popular Representations of Development* introduces the idea that while the issue of 'development' – defined broadly as problems of poverty and social deprivation, and the various agencies and processes seeking to address these – is normally one that is discussed by social scientists and policy makers, it also has a wider 'popular' dimension. Development is something that can be understood through studying literature, films, and other non-conventional forms of representation. It is also a public issue, one that has historically been associated with musical movements such as Live Aid and increasingly features in newer media such as blogs and social networking. The book connects the effort to build a more holistic understanding of development issues with an exploration of the diverse public sphere in which popular engagement with development takes place. This book gives students of development studies, media studies and geography as well as students in the humanities engaging with global development issues a variety of perspectives from different disciplines to open up this new field for discussion.

Written by Hennie Swanepoel and Frik de Beer (both based in South Africa) this development studies text, first published in 1997, is suitable for all introductory-level courses.

In this book some of the leading thinkers in development studies trace the history of their multi-disciplinary subject from the late colonial period and its establishment during decolonization all the way through to its contemporary concerns with poverty reduction. They present a critical genealogy of development by looking at the contested evolution and roles of development institutions and exploring changes in development discourses. These recollections, by those who teach, research and practise development, challenge simplistic, unilinear periodizations of the evolution of the discipline, and draw attention to those ongoing critiques of development studies, including Marxism, feminism and postcolonialism, which so often have been marginalized in mainstream development discourse. The contributors combine personal and institutional reflections, with an examination of key themes, including gender and development, NGOs, and natural resource management. The book is radical in that it challenges orthodoxies of development theory and practice and highlights

concealed, critical discourses that have been written out of conventional stories of development. The contributors provide different versions of the history of development by inscribing their experiences and interpretations, some from left-inclined intellectual perspectives. Their accounts elucidate a more complex and nuanced understanding of development studies over time, simultaneously revealing common themes and trends, and they also attempt to reposition Development Studies along a more critical trajectory.. The volume is intended to stimulate new thinking on where the discipline may be moving. It ought also to be of great use to students coming to grips with the historical continuities and divergences in the theory and practice of development.

This book focuses on the role of the state in economic development in a variety of Third World settings through an in-depth analysis of the past several decades. Berberoglu examines three major alternative development theories: developmentalism, dependency, and neo-Marxist. He then critically analyzes these theories and their variants to set the stage for a detailed examination of various development paths. Two paths of capitalist development are contrasted: the export-oriented neo-colonial model and the import-substituting state-capitalist model. The role of the state in each of these alternatives is discussed in the context of the balance of class forces. Berberoglu also provides case studies of Turkey, Tanzania, Peru, and India -- countries in which the state played a significant role in the development process. In each case, he demonstrates that the process of state-capitalist development inevitably leads to neo-colonialism. This export-oriented path ties Third World countries to centers of world capitalism, with all the consequent contradictions that such a linkage entails. The book outlines the class nature of these contradictions on a global scale and maps out the balance of class forces and struggles, the role of the state, and the resultant revolutionary developments that are part of the process of social change and transformation now under way in many Third World countries. Also included is an appendix highlighting the need for a class-centered approach in development studies.
