The first book in over twenty-five years devoted solely to allegory and personification in art history, this anthology complements current literary and cultural studies of allegory. The volume re-examines early modern allegorical imagery in light of crucial material, contextual and methodological questions: how are allegories conceived; for whom; and for what purposes? Contributors consider a wide range of allegorical representations in the visual arts and material culture, of both early modern Europe and the colonial "New World" 1400-1800. Essays included here examine paintings, sculpture, prints, architecture and the spaces of public ritual while discussing the process and theory of interpretation, formation of audiences,

reception history, appropriation and censorship. A special focus on the medium of the body in visual allegory unites the volume's diverse materials and methods.

The first biography of the epic life of one of the most important, enigmatic and private artists of the 20th century. Drawn from almost 40 years of conversations with the artist, letters and papers, it is a major work written by a well-known British art critic. Lucian Freud (1922-2011) is one of the most influential figurative painters of the 20th century. His paintings are in every major museum and many private collections here and abroad. William Feaver's daily calls from 1973 until Freud died in 2011, as well as interviews with family and friends were crucial sources for this book. Freud had ferocious energy, worked day and night but his circle was broad including not just other well-known artists but writers, bluebloods, royals in England and Europe, drag queens, fashion models gamblers, bookies and gangsters like the Kray twins. Fierce, rebellious, charismatic, extremely guarded about his life, he was witty, mischievous and a womanizer. This brilliantly researched book begins with the Freuds' life in Berlin, the rise of Hitler and the family's escape to London in 1933 when Lucian was 10. Sigmund Freud was his grandfather and Ernst, his father was an architect. In London in his twenties, his first solo show was in 1944 at the Lefevre Gallery. Around this time, Stephen Spender introduced him to Virginia Woolf; at night he was taking Pauline Tennant to the Gargoyle Club, owned by her father and frequented by Dylan Thomas; he was also meeting Sonia Orwell, Cecil Beaton, Auden, Patrick Leigh-Fermor and the Aly Khan, and his muse was a married femme fatale, 13 years older, Lorna Wishart. But it was Francis Bacon who would become his most important influence and the painters Frank Auerbach and David Hockney, close friends. This is an extremely intimate, lively and rich portrait of the artist, full of gossip and stories recounted by Freud to Feaver about people, encounters, and work. Freud's art was his life—"my work is purely autobiographical"—and he usually painted only family, friends, lovers, children, though there were exceptions like the famous small portrait of the Queen. With his later portraits, the

subjects were often nude, names were never given and sittings could take up to 16 months, each session lasting five hours but subjects were rarely bored as Freud was a great raconteur and mimic. This book is a major achievement, a tour de force that reveals the details of the life and innermost thoughts of the greatest portrait painter of our time. Volume I has 41 black and white integrated images, and 2 eight-page color inserts.

Volume 1 of 2. Coleridge's nephew, son-in-law, and first editor, Henry Nelson Coleridge, began at the end of 1822 a record of Coleridge's remarks as a way of preparing an anthology of the interests and thought of the great poet and critic. His manuscripts, gathered to form the major text of his new edition, include passages on relatives, friends, and various censorable topics omitted from the Table Talk of 1835 and unpublished until now. These two volumes also contain talk recorded by other listeners from 1798 until Coleridge's death in 1834. Some of these records have not been previously published; some are published from manuscripts that differ from versions previously known. Also included are previously unpublished remarks by Wordsworth. Along with a bibliography of earlier editions of Table Talk and other useful appendixes, Carl Woodring's edition reprints the second edition (1836), which differs from the manuscripts more extensively than the edition of 1835. This is the first fully annotated edition of a work that long remained more popular in the United Kingdom than any of the works in prose published by Coleridge himself. The two volumes make a convenient encyclopedia of his ideas and interests. Carl Woodring is George Edward Woodberry Professor of Literature Emeritus at Columbia University. Originally published in 1990. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. First Published in 1993. Routledge is an imprint of Taylor & Francis, an informa company. Continental philosophy has entered a new period of ferment. The long deconstructionist era was followed with a period dominated by Deleuze, which has in turn evolved into a new situation still difficult to define. However, one common thread running through the new brand of continental positions is a renewed attention to materialist and realist options in philosophy. Among the leaders of the established generation, this new focus takes numerous forms. It might be hard to find many shared positions in the writings of Badiou, DeLanda, Laruelle, Latour, Stengers, and i ek, but what is missing from their positions is an obsession with the critique of written texts. All of them elaborate a positive ontology, despite the incompatibility of their results. Meanwhile, the new generation of continental thinkers is pushing these trends still further, as seen in currents ranging from transcendental materialism to the London-based speculative realism movement to new revivals of Derrida. As indicated by the title *The Speculative Turn*, the new currents of continental philosophy depart from the text-centered hermeneutic models of the past and engage in daring speculations about the nature of reality itself. This anthology assembles authors, of several generations and numerous nationalities, who will be at the centre of debate in continental philosophy for decades to come."

#1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating

the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

A philosopher of science examines the biggest ethical and moral issues in science today, and explains why they matter for all of us -- scientist and layman alike. Science has produced explanations for everything from the mechanisms of insect navigation to the formation of black holes and the workings of black markets. But how much can we trust science, and can we actually know the world through it? How does science work and how does it fail? And how can the work of scientists help -- or hurt -- everyday people? These are not questions that science can answer on its own. This is where philosophy of science comes in. Studying science without philosophy is, to quote Einstein, to be "like somebody who has seen thousands of trees but has never seen a forest." Cambridge philosopher Tim Lewens shows us the forest. He walks us through the theories of seminal philosophers of science Karl Popper and Thomas Kuhn and considers what science is, how far it can and should reach, and how we can determine the nature of its truths and myths. These philosophical issues have consequences that stretch far beyond the laboratory. For instance: What role should scientists have in policy discussions on environmental issues such as fracking? What are the biases at play in the search for a biological function of the female orgasm? If brain scans can be used to demonstrate that a decision was made several seconds before a person actually makes a conscious choice, what does that tell us about the possibility of free will? By examining science through this philosophical lens, Lewens reveals what physics can teach us about reality, what biology teaches us about human nature, and what cognitive science teaches us about human freedom. A masterful analysis of the biggest scientific and ethical issues of our age, *The Meaning of Science* forces us to confront the practical, personal, and political purposes of science -- and why it matters to all of us. This lively and innovative work treats a body of literature not previously regarded as a unified genre. Offering comparative readings of a number of texts that are traditionally called allegories and that cover a wide time span, Maureen Quilligan

formulates a vocabulary for talking about the distinctive generic elements they share. The texts she considers range from the twelfth-century *De planctu naturae* to Pynchon's *Gravity's Rainbow*, and include such works as *Le Roman de la Rose*, Langland's *Piers Plowman*, Hawthorne's *Scarlet Letter*, Melville's *Confidence Man*, and Spenser's *Faerie Queene*. Whether or not readers agree with this book, they will enjoy and profit from it.
