The pace of modern life is accelerating. To keep up, we must keep on moving and adapting – constantly striving for greater happiness and success. Or so we are told. But the demands of life in the fast lane come at a price: stress, fatigue and depression are at an all-time high, while our social interactions have become increasingly self-serving and opportunistic. How can we resist today's obsession with introspection and self-improvement? In this witty and bestselling book, Danish philosopher and psychologist Svend Brinkmann argues that we must not be afraid to reject the self-help mantra and 'stand firm'. The secret to a happier life lies not in finding your inner self but in coming to terms with yourself in order to coexist peacefully with others. By encouraging us to stand firm and get a foothold in life, this vibrant anti-self-help guide offers a compelling alternative to life coaching, positive thinking and the need always to say 'yes!'

Steps forward in mathematics often reverberate in other scientific disciplines, and give rise to innovative conceptual developments or find surprising technological applications. This volume brings to the forefront some of the proponents of the mathematics of the twentieth century, who have put at our disposal new and powerful instruments for investigating the reality around us. The portraits present people who have impressive charisma and wide-ranging cultural interests, who are passionate about defending the importance of their own research, are

sensitive to beauty, and attentive to the social and political problems of their times. What we have sought to document is mathematics' central position in the culture of our day. Space has been made not only for the great mathematicians but also for literary texts, including contributions by two apparent interlopers, Robert Musil and Raymond Queneau, for whom mathematical concepts represented a valuable tool for resolving the struggle between 'soul and precision.'
