This book, the fifth in Garry Kasparov's magnificent history of the World Chess Championship, catalogs what is probably the greatest rivalry ever for the ultimate chess title.

The author describes his twenty month ordeal in the Nazi death camp.

This book provides a rock solid opening repertoire for Black, using systems based on the move ...c6. The backbone of this repertoire is the Caro-Kann versus 1 e4 and the Semi-Slav (via a Slav move order) versus 1 d4. In general these systems aim to neutralise White's early initiative. They aim for success by the gradual accumulation of small advantages, rather than by emerging victorious from an early tactical melee (which is rather problematic with the black pieces at the best of times). The book is co-authored by Cyrus Lakdawala and Keaton Kiewra and takes a teacher/student format. The "student" Keaton Kiewra is a very strong international master with two grandmaster norms. He normally specialises in razor-sharp defences such as the Sicilian Dragon and King's Indian. Now he wants to broaden his style and develop his skills at handling more sedate positions. His "teacher" is Cyrus Lakdawala, an extremely experienced player, coach and author, who guides Keaton along the learning path. A first-hand look at the games of the man recognized as the greatest chess player of all time. Bobby Fischer's geniusness raised the entire world's consciousness of chess and paved the way for multi-million dollar prizes. Includes 101 new games. Largest game collection ever assembled including 972 games and 1.043 listings.

The Caro-Kann is one of the most important and popular responses to 1.e4. World champions Botvinnik, Petrosian, Karpov and Anand have played this reliable chess opening in many of their games. Present-day elite players such as Hikaru Nakamura and Fabiano Caruana are proving that the 'drawish' reputation of the Caro-Kann no longer holds in modern chess. Victor Bologan presents a complete Caro-Kann repertoire for Black that is much more than just a lucidly explained and highly playable set of responses. In many lines Bologan provides – as he has done in his other recent major chess opening books for New In Chess – two options to handle the Black position. Bologan's explanations are accessible for a wide range of players and he provides the reader with a thorough grounding in the strategic and tactical motifs. During his research, Bologan has found many new ideas and resources. After reading and studying this book you are bound win many exciting games with Bologan's Caro-Kann!

Humour found in audiovisual products is, of course, performative in nature. If we consider instances of humour - any droll moment occurring in today's fare of mixed-genre products as a composite of cognition, emotion, interaction and expression - we see that the verbal code becomes just one component of four equally significant elements. And, as 'expression' is not limited to verbal output alone, humour may of course be created in absence of a verbal code. Translating humour for audiovisuals is not too different from translating verbal humour tout court. What makes humour occurring within audiovisual texts more problematic is the fact that it may be visually anchored; in other words a gag or a joke may pivot on verbal content directed at a specific element that is present within the graphic system of the same text. As the term itself suggests, audiovisuals contain two overlying structures: a visual and an auditory channel each of which contain a series of both verbal and non-verbal elements which inextricably cross-cut one another. The contributors in this collection of essays present a series of case studies from films and video-games exemplifying problems and solutions to audiovisual humour in the dubs and subs in a variety of language combinations.

Jonathan Rowson, author of the highly acclaimed *Seven Deadly Chess Sins*, investigates three questions important to all chess-players: 1) Why is it so difficult, especially for adult players, to improve? 2) What kinds of mental attitudes are needed to find good moves in different phases of the game? 3) Is White's alleged first-move advantage a myth, and does it make a difference whether you are playing Black or White? In a strikingly original work, Rowson makes use of his academic background in philosophy and psychology to answer these questions in an entertaining and instructive way. This book assists all players in their efforts to improve, and provides fresh insights into the opening and early middlegame. Rowson presents many new ideas on how Black should best combat White's early initiative, and make use of the extra information that he gains as a result of moving second. For instance, he shows that in some cases a situation he calls 'Zugzwang Lite' can arise, where White finds himself lacking any constructive moves. He also takes a close look at the theories of two players who, in differing styles, have specialized in championing Black's cause: Mihai Suba and Andras Adorjan. Readers are also equipped with a 'mental toolkit' that will enable them to handle many typical over-the-board situations with greater success, and avoid a variety of psychological pitfalls. Chess for Zebras offers fresh insights into human idiosyncrasies in all phases of the game. The depth and breadth of this book will therefore help players to appreciate chess at a more profound level, and make steps towards sustained and significant improvement.

La Difesa Caro-Kann venne ideata dal viennese Marcus Kann nella seconda metà dell'Ottocento. Il suo ingresso nella prassi agonistica avvenne nel 1883, quando fu adottata da Winawer. La prima elaborazione teorica dell'apertura fu formulata solo parecchi anni dopo dal tedesco Horatius Caro, che pubblicò nel 1896 alcune analisi. La sua definitiva consacrazione avvenne però solo negli anni Trenta. La difesa fornisce al Nero una posizione generalmente robusta, motivo per cui essa è stata adoperata da famosi giocatori posizionali, come Botvinnik e Karpov.

Moscow, in the autumn of 1984, was the setting for a clash between two of the all-time greats of chess: defending champion Anatoly Karpov, the most deadly tournament player in the history of the game, and Gary Kasparov, the 21 year old from Baku who would become the youngest ever World Champion were he to overthrow his rival. This gruelling test of contrasting character, style and sheer physical reserves roused a wave of media interest and thrust chess into the forefront of public attention.

Looks at several major chess opening strategies, including the Sicilian Defence, and provides examples of the games in which they were used

The Benko Gambit is a great opening for those who like active play. Black sacrifices a pawn in order to activate his pieces on the queenside, and generally gains enduring pressure. It has been played by recent world champions like Veselin Topalov, Vishy Anand and Garry Kasparov, and is a popular choice with amateurs all over the world.

Grandmaster Sergey Kasparov, who has extensive experience with the Benko, presents a complete repertoire for Black, with many new ideas and improvements on existing theory. This book is accessible for the average club player but stronger players, too, will learn many things they didn't know.

Dr. Fine, both a psychoanalyst and a great chess player of the 20th century, analyzes what sets chess champions apart. This new 3rd edition has, besides various corrections and improvements, a new introduction and a brand-new chapter called 'Total Control'. In this 35-page chapter Grooten adds the final instructive brick to his formidable, yet very accessible, building: inspired by Tigran Petrosian's playing style he explains amateurs how to exploit small advantages. With a new set of exercises. ---- Every club player knows the problem: the opening has ended, and now what? First find the right plan, then the good moves will follow! With this book, International Master Herman Grooten presents to amateur players a complete and structured course on: how to recognize key characteristics in all types of positions how to make use of those characteristics to choose the right plan His teachings are based on the famous "Elements" of Wilhelm Steinitz, but Grooten has significantly expanded and updated the work of the first World Champion. He supplies many modern examples, tested in his own practice as a coach of talented youngsters. In Chess Strategy for Club Players you will learn the basic elements of positional understanding: -- pawn structure -- piece placement -- lead in development --

open files -- weaknesses -- space advantage -- king safety -- exploiting small advantages. The author also explains what to do when, in a given position, the basic principles seem to point in different directions. Each chapter of this fundamental primer ends with a set of highly instructive exercises.

An easy-to-learn repertoire for the chessboard assassin

This papyrus (3rd century BC) contains c. 200 incipits (first lines) of Greek epigrams with a numeral at the end of each line that gives the number of lines of the complete epigram; most of them had 4 lines. Of these, only one has been ascribed to a known poet (Asklepiades), but it is by no means clear that all of them were his. Their publication, greatly aided by multispectral photography, is a very welcome addition to Hellenistic poetry.

One of the most influential books on chess ever published now in digital format. The Tiger is a vicious beast. He doesn't care about the aesthetic side of chess. He doesn't even care about making the best moves. All he cares about is winning. Do you want to win more games? Then become a Tiger. 'Chess for Tigers' tells you how to make the most of your playing strength, how to play upon your opponent's weaknesses, how to steer the game into a position which suits you and not your opponent, how to get results against strong opposition and how to avoid silly mistakes. This is a cult classic that is as relevant to today's generation of chess players as the first edition was. Regularly voted in the top 10 best chess books of all time, this book should be read by all chess players, especially beginners who want to win at all costs. Author Information Mr Webb started to make an impact on the chess world in the 1960s. He learned the game at the age of seven and ten years later, in 1966, he was under-18 champion in Britain and fourth in the European junior Championship. He married and moved to Sweden in the 1970s and became one of the few correspondence chess Grand Masters. The first edition of Chess for Tigers was first published in 1978. The sad death of Simon Webb in March 2005 shocked the chess community.

In many 1.d4 openings, Black has trouble getting his bishop on c8 into play. Former Russian Chess Champion Alexey Bezgodov presents a radical solution to this nagging problem; liberate your bishop right away and put it on f5 on the second move! Play 2...Bf5! against either 2.c4 or 2.Nf3 will surprise your opponent and is also a great way to support your development, because the bishop takes control of the important square e4. If White does not immediately take decisive action, then within a move or two he can relinquish any hopes on an opening advantage. Alexey Bezgodov has found some great antidotes to White's most dangerous reactions in sharp and attractive lines. To test your understanding of his system he has included more than 100 exercises. After studying the fresh ideas and the clear explanations presented in The Liberated Bishop Defence chess players of almost every strength will enjoy the flexibility of a surprising, effective and universal weapon against 1.d4.
