**Casebook of Clinical Neuropsychology** Joel E. Morgan, Ida Sue Baron, Joseph H. Ricker, 2010-10-29 Casebook of Clinical Neuropsychology features actual clinical neuropsychological cases drawn from leading experts' files. Each chapter represents a different case completed by a different expert. Cases cover the lifespan from child, to adult, to geriatric, and the types of cases will represent a broad spectrum of prototypical cases of well-known and well-documented disorders as well as some rarer disorders. Chapter authors were specifically chosen for their expertise with particular disorders. When a practitioner is going to see a child or an adult with X problem, they can turn to the case and find up to date critical information to help them understand the issues related to the diagnosis, a brief synopsis of the literature, the patient's symptom presentation, the evaluation including neuropsychological test results and other results from consultants, along with treatments and recommendations. Clinical cases represent a long-established tradition as a teaching vehicle in the clinical sciences, most prominently in medicine and psychology. Case studies provide the student with actual clinical material - data in the form of observations of the patient, examination/test data, relevant history, and related test results - all of which must be integrated into a diagnostic conclusion and ultimately provide the patient with appropriate recommendations. Critical to this educational/heuristic process is the opportunity for the reader to view the thought processes of the clinician that resulted in the conclusions and recommendations offered. With the science of the disorder as the foundation of this process, readers learn how the integration of multiple sources of data furthers critical thinking skills.

Clinical and Educational Child Psychology Linda Wilmschurst, 2013-01-22 Clinical and Educational Child Psychology  
“There is no shortage of books on developmental psychopathology, but what is unique about this one is the effort to bridge clinical and educational practice with school practice. It is very well conceptualized, and the ecological and transactional approach is very appropriate to the subject matter. In fact, it is the only framework capable of providing a full picture of children’s mental health problems. This book is highly relevant for psychologists working with children and families, as well as for teachers and special education professionals.” Isaac Prilleltensky, PhD, Dean, School of Education and Human Development, Professor of Educational and Psychological Studies, University of Miami  
Clinical and Educational Child Psychology: An Ecological-transactional Approach to Understanding Child Problems and Interventions examines developmental patterns in children aged 3 to 18 and the challenges that influence their developmental trajectory. Adopting a transactional-ecological perspective, Linda Wilmschurst explores the reasons why some children exposed to a variety of stressors may become vulnerable to a host of clinical, educational, and mental health problems. Initial chapters explore theoretical models and developmental milestones from early childhood through adolescence. Coverage also includes a variety of contemporary issues in the psychopathology of children and adolescents, with discussion of neurodevelopmental and disruptive behavior disorders, anxiety and mood disorders, attention and learning disorders, later onset disorders such as substance abuse and eating disorders, and issues of maltreatment that can result in trauma disorders. Through an innovative presentation that combines clinical and educational psychological approaches, Clinical and Educational Child Psychology offers unique insights into our understanding of behavioral issues during the transition from childhood to adolescence.

*Neuropsychological Rehabilitation* Chad A. Noggle, PhD, ABN, Raymond S. Dean, PhD, ABPP, ABN, ABPdN, Mark T. Barisa, PhD, ABPP, 2013-04-26  
Neuropsychological Rehabilitation provides useful introductory material and background information on various disorders, assessments, and rehabilitative interventions for adult and geriatric populations... This book is essential for psychologists or clinical neuropsychologists who have a strong interest in understanding the current medical aspects of neuropsychological rehabilitation.--PsycCRITIQUES  
This volume disseminates knowledge about the most advanced practices and techniques in the rehabilitation of neuropsychological deficits, covering both specific neuropsychological domains and approaches in neurorehabilitation. It adheres to the philosophy that it is not enough to identify a deficit or diagnose a disease unless doing so helps to direct rehabilitation efforts to improve function. Intended to advance clinical skills, the book goes beyond surface diagnostic practice to foster rehabilitative efforts in response to residual deficits and disease. The volume begins by addressing the foundations of neuropsychology in rehabilitation and discussing, in depth, domain-specific rehabilitation practices, with a focus on functioning. This is followed by a discussion of supplemental applications and practices that go beyond function-specific methodology including neuroimaging and pharmacological agents. Also covered is the role of system/environmental manipulation and transitioning strategies. The final section attends to those presentations/groupings most commonly seen in rehabilitation practice for which there is no prototypical form.  
Key Features: Presents in depth the most advanced clinical applications for neuropsychological rehabilitation  
Covers neuropsychological rehabilitation in terms of specific cognitive domains (attention, language, memory) and approaches to and practices in neurorehabilitation (neuroimaging, vocational rehabilitation, pharmacological rehabilitation)  
Written by the foremost scholars in the field
