David Myers' new partnership with coauthor C. Nathan DeWall matches two dedicated educators and scholars, each passionate about teaching psychological science through writing and interactive media. With this new edition of the #1 bestselling Psychology, Myers and DeWall take full advantage of what an integrated text/media learning combination can do. New features move students from reading the chapter to actively learning online: How Would You Know puts students in the role of scientific researcher and includes tutorials on key research design principles; Assess Your Strengths self-tests help students learn a little more about themselves, and include tips about nurturing key strengths. These and other innovations rest on the same foundations that have always distinguished a new David Myers edition—exhaustive updating (hundreds of new citations), captivating writing, and the merging of rigorous science with a broad human perspective that engages both the mind and heart.

Why Things Go Right. The Science of Psychology: An Appreciative View by Laura King (University of Missouri at Columbia) is the first text to bring a truly appreciative view of psychology-as a science and for exploring behavior-to introductory students. It is built around the idea that students must study the discipline of psychology as a whole, that the sub-disciplines are intricately connected, and that human behavior is best understood by exploring its functioning state in addition to its potential dysfunctions. For example, imagine that you have been asked to create a science of "watchology." You have two watches that both have had the unfortunate "trauma" of being left in the pocket of someone's jeans through the washer and dryer. One watch has suffered the worst possible fate-it no longer tells time. The other has emerged from the traumatic event still

ticking. Which watch would you use to develop your new science of watchology? Clearly, the working watch will help you understand watches better than the broken one. What does watchology have to do with psychology? Quite simply, in psychology as in watchology, it makes sense to start with what works: to gain a general understanding of human behavior and then apply that knowledge to those who have emerged from life's experiences in dysfunction.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. Discovering the Universe, Fifth Edition is one of the briefest texts available for an introductory astronomy course, while providing the wide range of factual topics that are the hallmark of the text and are consistent with most course needs. The "Fourth Edition" incorporates hundreds of new research studies throughout, with particular attention to areas of intensive current research and enduring student interest, including neuroscience, lifespan development, memory, and gender and culture issues. Also new is the dramatically enhanced media and supplements package, offering more ways than ever to help students make the study of psychology a part of their world.

Sandra Hockenbury and new coauthor Susan Nolan's remarkable textbook is grounded in the belief that all kinds of students can develop a real understanding of psychology and lasting scientific literacy. The authors act on that belief by using relatable personal stories to communicate the concepts of psychological science (and the process of science itself), and by presenting important research in a clear not oversimplified way. Hockenbury and Nolan also take full advantage of online learning, creating activities in LaunchPad

that have students thinking about psychology as scientists do. New co-author, Susan Nolan of Seton Hall University was recently designated a Master Teacher by the Society for Teaching Psychology. She regularly gives talks about incorporating scientific literacy into the introductory course and across the psychology curriculum.

Looking for the latest research and practices on character strengths and mindfulness? Curious about how character strengths can supercharge your mindfulness practice? Or how mindfulness can help you deploy your best qualities? Look no further – the answers are in this book! At the core of this hands-on resource for psychologists and other practitioners, including educators, coaches, and consultants, is Mindfulness-Based Strengths Practice (MBSP), the first structured program to combine mindfulness with the character strengths laid out in the VIA Institute's classification developed by Drs. Martin E. P. Seligman and Christopher Peterson. This 8-session program systematically boosts awareness and application of character strengths, helping people flourish and lead more fulfilling lives. The author's vast

experience working with both mindfulness and character strengths is revealed in his sensitive and clear presentation of the conceptual, practical, and scientific elements of this unique combined approach. It is not only those who are new to mindfulness or to character strengths who will appreciate the detailed primers on these topics in the first section of the book. And the deep discussions about the integration of mindfulness and character strengths in the second section will benefit not just intermediate and advanced practitioners. The third section then leads readers step-by-step through each of the 8 MBSP sessions, including details of session structure and content, suggested homework, 30 practical handouts, as well as inspiring quotes and stories and useful practitioner tips. An additional chapter discusses the adaption of MBSP to different settings and populations (e.g., business, education, individuals, couples). The mindfulness and character strengths meditations on the accompanying CD support growth and development. This highly accessible book, while primarily conceived for psychologists, educators, coaches, and consultants, is suitable for anyone who is interested in living a flourishing life.

This acclaimed classroom favourite makes the science of psychology come alive for students, with personal stories that exemplify important concepts in a student-friendly way and coverage of the field's scientific foundations and advances. The substantially updated new edition extends the book's focus on developing scientific literacy in the context of psychology, with new features in print and in the book's new online course space, LaunchPad. These features are the result of the book's most dramatic addition—Sandra Hockenbury's new writing partnership with co-author, Susan Nolan, who shares her belief that the introductory course can help all kinds of students develop a real understanding of psychology and lasting scientific literacy without sacrificing the field's research core. The book can also be purchased with the breakthrough online resource, LaunchPad, which offers innovative media content, curated and organised for easy assignability. LaunchPad's intuitive interface presents quizzing, flashcards, animations and much more to make learning actively engaging.

Matthew Johll's Exploring Chemistry covers the standard topics for the nonmajors course in the typical order, but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real-life situations. For example, students work through the often-difficult topics of molecular structure, gas laws, and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers, and the creation of biodegradable biopolymers. It's the same case-driven approach that Johll uses in his acclaimed Investigating Chemistry (now in its Third Edition) but Exploring Chemistry goes beyond the other book's specific focus on examples from forensic science to use real-life stories from cooking, athletics, genetics, green chemistry, and more.

With Music: The Art of Listening, students practice engaging with music critically, and with an appreciative ear. Presenting music within a broadened cultural and historical context, The Art of Listening encourages students to draw on the relationships between: music and the other arts; musical characteristics of different periods; as well as Western music and various non-Western musics and concepts. Learning to appreciate music is a skill. Together with McGraw-Hill's Connect Music, The Art of Listening helps students develop that skill by encouraging them to be active and thoughtful participants in their own listening experience. Whether listening through headphones or at a live performance, The Art of Listening will develop students' ability to hone the skills required to listen to, reflect upon, and write about music.

"This innovative new textbook for art appreciation fully integrates western and non-western art traditions by taking a thematic rather than a chronological approach."--Back cover.

"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

After her family's supposedly haunted estate is sold to Tobias Rakes, Genevieve Crowfoot stays on as the housekeeper in order to protect Tobias from the mansion's ghost, who is out to avenge a century-old family feud. Original.

Excerpt from book: CHAPTER II The Evidence Of Mind 6. Inferring Mind from Behavior In the last chapter we saw that some recent writers upon animal behavior and its interpretation, while refusing to admit the presence of consciousness in all forms of animal life, yet hold that it can be proved to exist in certain forms. The latter, it is maintained, display certain peculiarities of behavior that may be regarded as proofs of a psychic accompaniment. Into the nature of these proofs we may now inquire. To begin with, can it be said that when an animal makes a movement in response to a certain stimulus, there is an accompanying consciousness of the stimulus, and that when it fails to move, there is no consciousness? Is response to stimulation evidence of consciousness? In the case of man, we know that absence of visible response does not prove that the stimulus has not been sensed; while it is probable that some effect upon motor channels always occurs when consciousness accompanies stimulation, the effect may not be apparent to an outside observer. On the other hand, if movement in response to the impact of a physical force is evidence of consciousness, then the ball which falls under the influence of gravity and rebounds on striking the floor is conscious. Nor is the case improved if we point out that the movements which animals make in response to stimulation are not the equivalent in energy of the stimulus applied, but involve the setting free of energy stored in the animal as well. True, when a microscopic animal meets an obstacle in its swimming, and darts backward, the movement is not a mere rebound; it implies energy contributed by the animal's own body. But just so an explosion of gunpowder is not the equivalent in energy of the heat of the match, the stimulus. Similarly it is...--Annotation Published: April 2014.
