This title was first published in 2002: As the twenty-first century began, it was easy to assume that the reforms to the international financial system undertaken in the last half of the 1990s were adequate to the core tasks of ensuring stability, sustained growth and broadly shared benefits in the world economy. That comfortable consensus has now been shattered. This volume critically assesses fundamental issues including: -the elements and adequacy of recent G7-led efforts at international financial reform -current causes of and prospects for growth in the new global economy -the challenges of crisis prevention -private sector participation and IFI responsibilities -the world's monetary supply and sovereignty in the face of market forces. These key topics are examined by leading economists and scholars of political economy from both academic and policy communities in G7 countries, making it an essential addition to the collections of all those concerned with the challenges facing the world economy in the coming years.

This book argues that the trade-distorting effects of advantages associated with SOEs are more severe from an economic perspective, and the behavior of SOEs after receiving advantages is of more concern, compared to private-owned enterprises (POEs). The premise is that the existence of SOEs per se is not the essential problem; rather, the underlying problems are (i) the disproportionate granting of advantages to SOEs (compared to POEs) and (ii) the behavior of SOEs once they receive advantages. The book offers a systematic analysis focusing on the various advantages granted to SOEs and their subsequent behavior. Its detailed analysis reveals the inadequacy of current WTO rules and is complemented by a number of concrete proposals.
