The chapters in this volume focus on selected exchange rate, monetary and financial issues and policies that are of contemporary relevance and importance to Asia, including choice of exchange rate regimes, causes and consequences of reserve accumulation,

Undeniably widespread and powerful as it is, the Internet is not almighty: it can reach as high as the skies (cloud computing), but it cannot escape competition. analysis. The latter is often challenged by the difficulties in predicting the outcome of competition, in particular in terms of innovation. Do the specific competition law issues in a digital environment presuppose a reconsideration of competition law concepts and their application? Can current competition law tools be adjusted to the rush pace of dynamic industries? To what extent could competition law be supplemented by regulation – is the latter a foe or rather an ally? This book provides an analysis of recent developments in the most relevant competition law cases in a digital environment on both sides of the Atlantic (the EU and the US) and assesses platform competition issues from a legal as well as an economic point of view.

Institutional profit realization has become highly contingent on research education, investment, and planning; yet, the methodology of research may not be clear to young researchers or students of Economics and Management Science. In *Research and Profit Maximization in Finance and Economics*, author Christopher Warburton breaks the methodology of research into three component parts: the essence of research; avenues from which data on economic indicators could be obtained; and the estimation of assorted models for forecasting economic indicators to maximize profit. The central concept of profit maximization is presented to incorporate the optimization problem in Economics. The substitution, Lagrangean, graphing, and linear programming methods of optimization are fully explained. Data and model discussions include practical examples of stationary and non-stationary data, as well as univariate, multivariate, and atheoretic (Box-Jenkins) regression models. *Research and Profit Maximization in Finance and Economics* is a concise presentation to meet notable challenges in academic and business research, which involve data collection, basic data estimation, forecasting, and profit maximization.
