business, finance, and investment rapidly increasing, but we are also moving closer than ever before toward a convergence of accounting standards worldwide. Updated and revised to keep pace with these changes, this Sixth Edition of Radebaugh, Gray, and Black's International Accounting and Multinational Enterprises focuses on international business strategies and how accounting applies to these strategies. You'll learn how to use financial and accounting information across borders, and make more informed decisions in an increasingly complex international business environment. The authors also explain the key factors, including cultural differences, that influence accounting standards and practices in different countries, and how those factors impact the harmonization of standards worldwide.

This book considers the impact of the COVID-19 pandemic on international diplomacy, and the challenges and opportunities it presents for the future of multilateralism.

Global cooperation and solidarity are central to responding to and mitigating the health and socio-economic effects of the COVID-19 pandemic, yet, to many, this was slow to mobilize and lacking in political leadership. This book takes a practical look at the lessons learned from the period spanning the World Health Organization's first declaration of a public health emergency of international concern in January 2020, to the commemoration of the 75th Anniversary of the United Nations in October 2020. This timespan covers a critical period in which to consider key areas of diplomacy, covering a range of tools of global cooperation: multilateral diplomacy, the rule of law, sustainable development, economics and financing, digital governance, and peace and security. Each chapter in this book introduces readers to the current situation in their respective areas, followed by a constructive consideration of lessons learned from the pandemic's impact on that field, and key recommendations for the future. The practical focus and future orientation is particularly important as the book injects pragmatism and guidance that will facilitate 'building back better' in COVID response plans, while creating space for continued focus on global commitments around sustainable development and the future of the UN. Written by a team of authors who have worked directly in International Public Policy and the establishment of global agendas at the United Nations, this book will be essential reading for professionals and policymakers involved in diplomatic roles, as well as students and scholars interested in the future of international relations, global governance and sustainable development.

International Accounting: A User Perspective is designed to provide an understanding of international accounting issues to current and future business managers. The book takes a user perspective to international financial reporting because most business executives are more likely to be users of financial information that crosses national borders than users of it. With the recent problems exposed in the quality of financial reporting in many countries, a solid understanding of international accounting issues is an important part of the portfolio of skills that managers in medium and large enterprises must possess.

Globalization is a multi-dimensional concept reflecting the increased economic, social, cultural, and political integration of countries. There has been no pinpointed consensus on the history of globalization; however, the globalization process has gained significant speed as of the 1980s in combination with liberalization. Many countries have removed or loosened barriers over the international flows of goods, services, and production factors. In this context, both liberalization and globalization have led to considerable institutional, economic, social, cultural, and political changes in the world. The liberalization and globalization processes have affected economic units, institutions, cultures, social lives, and national and international politics. The Handbook of Research on Institutional, Economic, and Social Impacts of Globalization and Liberalization provides a comprehensive evaluation of the institutional, economic, and social impacts of globalization and

While highlighting topics like economics, finance, business, and public administration, this book is ideally intended for government officials, policymakers, practitioners, stakeholders, researchers, and academicians interested in the international impacts of globalization and liberalization across a variety of different domains. *Advances in International Accounting* is a refereed, academic research annual, that is devoted to publishing articles about advancements in the development of accounting and its related disciplines from an international perspective. The International Financial Reporting Standards are quite different from other sets of accounting standards, and are fundamentally different from US-GAAP, in that they are based on principles, and not on detailed rules. Financial Reporting under IFRS: A topic-based approach offers a global perspective on IFRS by presenting the prescribed rationale and principles and illustrating them through numerous examples from large international companies. It aims to develop the fundamental skills necessary to read and use the information contained in all types of financial statements, through examples, activities, questions and answers. The book is broadly divided into three sections. Section one examines the structure of the Balance Sheet and the Income Statement, their links and the accounting mechanisms used to prepare them. Section two deals with the identification, evaluation and reporting of Balance Sheet items. Section three covers the use of financial statements to analyze a firm's performance and its risks. Throughout the book special topics are covered, including Derivatives and Hedge accounting (IAS 39), Business Combination (IFRS 3) and Operating Segments (IFRS 8). Financial Reporting under IFRS is ideally suited to the needs of students of accounting and

financial reporting, but all users of financial statements, from creditors and investors to suppliers, customers, employees and governments will benefit from its concise, topic-based approach.

Financial reporting practices differ widely between countries and this has far-reaching implications for multinational businesses. Over more than a century, there have been attempts to classify countries into groups by similarities of practices. With the recent spread of International Financial Reporting Standards, it might appear that classification is largely of historical interest, but this is not the case, for several reasons explained in this book. Christopher Nobes offers a critical analysis of the many previous accounting classifications, having drawn lessons from other fields of science and social science. Revised and updated to reflect the IFRS era, the book discusses how old classifications are reflected in today's international differences in practice under IFRS. It concludes with a discussion on the most useful classifications, and how classifications can still be relevant in the era of international standards. This book will be essential for academics, postgraduates and undergraduates in international accounting, accounting theory and to international accounting professionals.

This book explores accounting for biological assets under IAS 41 – Agriculture, and explains the recent adjustments introduced by the IASB which allow firms to choose between cost or revaluation models concerning mature bearer plants. Identifying the firm and country-level drivers that inform the disclosure and measurement practices of biological assets, this concise guide examines the value relevance of measuring those assets at fair value. It also analyses how firm and country-level drivers explain the differences in the disclosure level and practices used to measure biological

assets under IAS 41. Finally, it evaluates whether there is a difference in the relevance of biological assets among the listed firms with high and low disclosure levels on biological assets. Based on a major international study of a wide selection of firms and country-level drivers, this book is vital for standard setters, stakeholders, students, accountants and auditors who need to understand disclosure and measurement practices of biological assets under IAS 41. This book investigates current resistance to the ongoing change from US Generally Accepted Accounting Principles (GAAP) to International Financial Reporting Standards (IFRS). 138 countries have, thus far, adopted IFRS as a singular accounting language, while the Securities and Exchange Commission (SEC), the Financial Accounting Standard Board (FASB), and the International Accounting Standard Board (IASB) have determined that IFRS should be adopted optionally in the United States by 2016. The book shows that IFRS should act as a singular accounting language, which will promote high transparency and a better economic position in the world financial market.
