"Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and violence as the three leading causes. People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries. Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families. The aims of International perspectives on spinal cord injury are to: --assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; --make recommendations for actions based on this evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities. "A Practical Guide to Constitution Building provides an essential foundation for understanding constitutions and constitution building. Full of world examples of groundbreaking agreements and innovative provisions adopted during processes of constitutional change, the Guide offers a wide range of examples of how constitutions develop and how their development can establish and entrench democratic values. Beyond comparative examples, the Guide contains in-depth analysis of key components of constitutions and the forces of change that shape them. The Guide analyzes the adoption of the substantive elements of a new constitution by looking at forces for the aggregation or dissemination of governmental power, and forces for greater legalization or politicization of governmental power, and examining how these forces influence the content of the constitution. It urges practitioners to look carefully at the forces at play within their individual contexts in order to better understand constitutional dynamics and play a role in shaping a constitution that will put into place

The most important core skills for medical students to master are history taking and clinical examination. This extensively revised, eighth edition has been written with the philosophy that the acquisition of clinical skills is most effectively undertaken at the bedside. This pocketbook should be used as a companion, to be taken onto the wards and into consulting rooms where the information is most needed. The book begins with a system of history taking followed by a new chapter on the analysis of key symptoms. The remaining chapters cover physical examination of each of the major systems. Each stage of the examination starts with a detailed, step-by-step description of the examination method complemented by relevant illustrations, diagrams and tables on the facing page. This book is intended primarily for use at the outset of clinical training; once students have achieved proficiency in the basic skills of interviewing and examining, the book should also prove useful for revision. An invaluable starter book concentrating purely on the fundamentals of performing a patient examination. Covers each body system and outlines the principles of: - taking a history - how to conduct a physical examination - specific examination points as appropriate Concentrates only on the main symptoms of disease and then the normal and abnormal physical findings. Mention of specific diseases is confined to those most commonly encountered. Compact and pocket-sized to be carried around easily. · Now in full colour double-page format · Clear simple colour line drawings covering the essentials of a clinical

In a world of finite resources, expanding populations and widening structural inequalities, the ownership of things is increasingly contested. Not only are the commons being rapidly enclosed and privatized, but the very idea of what can be owned is expanding, generating conflicts over the ownership of resources, ideas, culture, people, and even parts of people. Understanding processes of ownership and appropriation is not only central to anthropological theorizing but also has major practical applications, for policy, legislative development and conflict resolution. Ownership and Appropriation significantly extends anthropology's long-term concern with property by focusing on everyday notions and acts of owning and appropriating. The chapters document the relationship between ownership, subjectivities and personhood; they demonstrate the critical consequences of

materiality and immateriality on what is owned; and they examine the social relations of property. By approaching ownership as social communication and negotiation, the text points to a more dynamic and processual understanding of property, ownership and appropriation.

From one of China's most acclaimed and decorated writers comes a powerful first-person account of life in Wuhan during the COVID-19 outbreak. On January 25, 2020, after the central government imposed a lockdown in Wuhan, acclaimed Chinese writer Fang Fang began publishing an online diary. In the days and weeks that followed, Fang Fang's nightly postings gave voice to the fears, frustrations, anger, and hope of millions of her fellow citizens, reflecting on the psychological impact of forced isolation, the role of the internet as both community lifeline and source of misinformation, and most tragically, the lives of neighbors and friends taken by the deadly virus. A fascinating eyewitness account of events as they unfold, *Wuhan Diary* captures the challenges of daily

life and the changing moods and emotions of being quarantined without reliable information. Fang Fang finds solace in small domestic comforts and is inspired by the courage of friends, health professionals and volunteers, as well as the resilience and perseverance of Wuhan's nine million residents. But, by claiming the writer's duty to record she also speaks out against social injustice, abuse of power, and other problems which impeded the response to the epidemic and gets herself embroiled in online controversies because of it. As Fang Fang documents the beginning of the global health crisis in real time, we are able to identify patterns and mistakes that many of the countries dealing with the novel coronavirus have later repeated. She reminds us that, in the face of the new virus, the plight of the citizens of Wuhan is also that of citizens everywhere. As Fang Fang writes: "The virus is the common enemy of humankind; that is a lesson for all humanity. The only way we can conquer this virus and free ourselves from its grip is for all members of humankind to work together." Blending the intimate and the epic, the profound and the quotidian, Wuhan Diary is a remarkable record of an extraordinary time.
