Personality Theories: A Global View by leading scholar Eric Shiraev takes a dynamic, integrated, and cross-cultural approach to the study of personality. The text is organized around three general questions: Where did personality theories come from? How did the theorists study facts? How do we apply personality theories now? These questions provide a consistent focus on social context, interdisciplinary science, and applications. Going beyond traditional research from the Western tradition, the book also covers theories and studies rooted in the experiences of other countries and cultures.

This unique workbook was written for the undergraduate Personality course where professors are looking for activities to help students learn and apply personality theories to real-life examples. The workbook is geared toward personality courses that are theories-based, as opposed to research-based. Because the cases explored are those based on normal behavior (as opposed to abnormal behavior), this workbook is especially useful. While most personality texts present the major concepts of personality theories, they don't help students apply the theories they have learned or to use the theories to understand other examples on their own. This workbook will help students do just that and is the perfect complement to any Personality text.

"What makes people behave as they do? Are people ordinarily aware of what they are doing, or are their behaviors the result of hidden, unconscious motives? Are some people naturally good and others basically evil? Or do all people have potential to be either good or evil? Is human conduct largely a product of nature, or is it shaped mostly by environmental influences?

Can people freely choose to mold their personality, or are their lives determined by forces beyond their control? Are people best described by their similarities, or is uniqueness the dominant characteristic of humans? What causes some people to develop disordered personalities whereas others seem to grow toward psychological health? These questions have been asked and debated by philosophers, scholars, and religious thinkers for several thousand years; but most of these discussions were based on personal opinions that were colored by political, economic, religious, and social considerations. Then, near the end of the 19th century, some progress was made in humanity's ability to organize, explain, and predict its own actions. The emergence of psychology as the scientific study of human behavior marked the beginning of a more systematic approach to the study of human personality. This edition continues to emphasize the strong and unique features of earlier editions, namely the overviews near the beginning of each chapter, a lively writing style, the thought-provoking concepts of humanity as seen by each theorist, and the structured evaluations of each theory"--

various theories.

Now in a revised and expanded second edition, this influential work argues for the enduring stability of personality across adult development. It also offers a highly accessible introduction to the five-factor model of personality. Critically reviewing different theories of personality and adult development, the authors explain the logic behind the scientific assessment of personality, present a comprehensive model of trait structure, and examine patterns of trait stability and change after age 30, incorporating data from ongoing cross-sectional and longitudinal studies. The second edition has been updated throughout with the authors' new findings, ideas, and interpretations, and includes a new chapter on cross-cultural research. It culminates in an additional new chapter that presents a comprehensive theory of personality grounded in the five-factor model.

In *The Mystery of Personality: A History of Psychodynamic Theories*, acclaimed professor and historian Eugene Taylor synthesizes the field's first century and a half into a rich, highly readable account. Taylor situates the dynamic school in its catalytic place in history, re-evaluating misunderstood figures and events, re-creating the heady milieu of discovery as the concept of "mental science" dawns across Europe, revisiting the widening rift between clinical and experimental study (or the couch and the lab) as early psychology matured into legitimate science. Gradual but vital evolutions form the heart of this chronicle: the ebb and flow of analytic theory and practice, the shift from doctor-centered to client-centered therapy, the movement from exclusionary to multidisciplinary, the evolving role of the therapist. And as can be expected from the author, there is special emphasis on the sublime in psychology: the philosophy/psychology fusion of the New England transcendentalists, the battle between

spiritualism and science in 1880s America, and early versions of today's spiritually-attuned therapies. Pivotal concepts and key individuals covered are: Charcot, Janet, and the origins of dynamic personality theory in the so-called French, Swiss, English, and American psychotherapeutic axis. Person and personality: William James's "radical empiricism" The rise of psychoanalysis: Freud, the Freudians, and the Neo-Freudians Adler and Jung, who were never "students" of Freud: Toward, within, and beyond the self Murray, Allport, and Lewin at Harvard in the 30s Culture and personality, pastoral counseling, and Gestalt Psychology in New York in the '40s and '50s An Existential-humanistic and Transpersonally oriented depth psychology in the 60s The current era: "science confronts itself", as neuroscience enters the picture. Students of psychology and its history will find in this inspiring narrative both possibilities for further study and a new appreciation of their own work. The Mystery of Personality: A History of Psychodynamic Theories is a stimulating course conducted by a master teacher.

For undergraduate courses in Personality or Theories of Personality. This engaging text provides an overview of major classic and current theories of personality, brings theories to life through the interpretation of illustrative biographies, and integrates a clear explanation of theory with the latest research. Understanding persons is both Susan Cloninger's academic passion as well as her personal lifestyle. With so many years of research and instruction under her belt, she has come to several important conclusions, many of which have helped guide her text through six editions. For one, while theories of personality can never explain all the particulars of individual lives, the theories explored within this text can help open eyes towards the important nuances and themes that might otherwise go unnoticed. With this in mind, this engaging text provides an overview of major classic and current theories of personality, brings theories to life through the interpretation of illustrative biographies, and integrates a clear explanation of theory with the latest research. As well, it conveys the positive value of various

theories in a balanced and respectful way, preparing students to apply theoretical ideas to understanding particular individuals they may encounter in their professional work and personal lives.

Presenting coverage of the major theorists who represent different aspects of the approaches to personality, this text also looks at the study of personality theories, suggesting conclusions that can be drawn from many theorists' work.

Thoroughly updated to include the latest research available, THEORIES OF PERSONALITY, 10E takes a unique theory by theory approach that carefully guides students through major theories on their way to a comprehensive understanding of personality. Richard Ryckman's student-friendly writing style offers a straightforward presentation of major theories, helping readers more easily distinguish between them. The text begins by providing a framework that defines personality and emphasizes the science of personality--including the interrelation between research and theory. Next it introduces each major theoretical position with an objective overview of the theorist's basic concepts and principles. It concludes by noting the ways in which the different theories stimulate additional research efforts and by presenting five current research trends resulting from the work of these earlier theorists. The result is a text that merges the best of classic and contemporary research to equip students with a solid working knowledge of personality. [The book] is designed both to explain the major personality theories and to stimulate critical thinking about them. [The author] has pursued four main objectives. To present a clear and concise picture of the major features of each important personality theory ... To focus on significant ideas and themes that structure the content of the different personality theories ... To provide criteria to guide the evaluation of each theory ... To present activities, informed by the tenets of each theory, that will provide growth in critical thinking skills. -Pref. First published in 2009. evidence for the development of personality theories through time. Without condemning the founding theorists who came before him, Ellis builds on more than a century of psychological research to re-examine the theories of Freud, Jung, and Adler while taking an equally critical look at modern, research-based theories, including his own.

Personality psychology is the study of the person. As such, it is arguably the broadest, most "philosophical", branch of psychology. It involves an examination of the effects of genetics, the physical environment, culture, upbringing, trauma, pathology and more. In as much as this is clearly a huge undertaking, it is as much a matter of competing theories as it is of empirical research. For this reason, it remains a tradition in the field to look at various attempts over the last 100-plus years to tackle the issue: "What is it to be a person?" This book attempts to provide an open-minded review of the most important of these theories.

The respected, recognized best seller in the market, Jerry Burger's PERSONALITY is a solid mid-level book that fuses the best of theory-based and research-based instruction to give students an illuminating introduction to the subject. Burger pairs theory, application, and assessment chapters with chapters that describe the research programs aligned with every major theoretical

approach. Biographical sketches of theorists and accounts of the stories behind influential research programs help students understand how classic and contemporary findings relate to each other, and reinforce the idea that theory and research perpetuate one another. In-book self-assessments promote students' interaction with the material. Designed as a text for both graduate and undergraduate students, this book, originally published in 1995, presents an intrapsychic explanation of human behaviour – concepts based on psychological processes and 'structures' within the mind. In this context, a unique

treatment of personality theory is introduced. It focuses on Freud, Kelly and Angyal: Freud's psychoanalytic theory of personality based on desires, Kelly's personal construct theory for thinking, and Angyal's holistic concepts of personality. Each theory is given a detailed analysis in separate chapters. Freud's psychoanalytic theory is cast as a theory of motivation, Kelly's personal construct theory as a theory of cognition, and then it is noted that there is no comprehensive theory of personality based on emotion. Although Angyal's holistic theory is rarely described in modern textbooks, Lester includes this because none of the other holistic theorists rival Angyal in their range of hypothetical constructs or descriptive terms. Then, in sections dealing with alternative viewpoints, the author shows how other personality theorists actually endorse and expand upon the ideas expressed by the aforementioned three, albeit with different terminology. Recognizing the diversity of holistic views in theories of personality, several counterpoint chapters are devoted to the holistic ideas. Lester separates these into three major areas: theorists who have focused on the split in the mind between the real and ideal self; recent theorists who explore the possibility that the mind is a 'multiplicity of selves'; and theorists who, though not having their viewpoints sufficiently articulated in the literature, are still well established in the history of psychology. Other features include a presentation of the material in modern viewpoints, instead of the precise and perhaps outdated style as written by the individual theorists, and boxed highlights in each section, providing students with practical capsule information for easy reading.

This seventh edition of 'Theories of Personality' continues to provide comprehensive coverage of the most influential theorists of personality.

The 7th edition of this trusted introduction to personality centers on the premise that personality theories are a reflection of the unique cultural background, family experiences, personalities, and professional training of their originators. The book begins by acquainting students with the meaning of personality and providing them with a solid foundation for understanding the nature of theory, as well as its crucial contributions to science. The chapters that follow present twenty-three major theories: coverage of each theory also encompasses a biographical sketch of each theorist, related research, and applications to real life. The primary focus of this revision was updating the theory chapters to reflect the most recent research.

The Ninth Edition of PERSONALITY THEORIES continues to provide thorough coverage enhanced with helpful learning aids, opportunities for honing critical thinking skills, and integration of multicultural and gender-related issues. Each chapter focuses on one theory or group of theories and includes brief biographies that shed light on how the theories were formed. The author also provides criteria for evaluating each theory and cites current relevant research. A final chapter on Zen Buddhism covers a major non-Western theory of personality and serves to distinguish this program in the field. Available with InfoTrac Student Collections
