

## Dubai Water Bus Map Rta

Already a regional and global centre for business and finance, Dubai's reputation has been bolstered by the MSCI's decision to upgrade the UAE from frontier to emerging market status in 2014, while the emirate's successful Expo 2020 bid is expected to generate myriad opportunities for private investors across a range of sectors. Construction is thriving once again, driven in large part by strong retail sector growth, with various projects, including plans for the world's largest mall, indicating that the sector will maintain its position as the emirate's biggest GDP contributor moving forward. The transport and logistics framework is set for major expansion in the coming years as well, furthering cementing the emirate's status as a leading transport and logistics hub not just regionally, but globally too. The continued development of Dubai's retail and hospitality offerings, alongside the upgrades to its airports, should help to ensure robust growth in visitor numbers from both the region and further afield.

Education is a source of national pride in Lebanon. When the general public was asked how the education system was performing, 76 percent of respondents had a positive opinion; and these satisfaction rates have been consistently high over the years. However, perception of education quality does not reflect the reality of the sector; and learning outcomes, which are the determining metrics of success in education, have been lower than the international average, with a declining trend since 2007. This volume seeks to uncover why the education system in Lebanon is not reaching its full potential. It uses a political economy approach to study the drivers and factors that guide education operations to produce and utilize education outcomes. This includes the study of context, stakeholders, and processes that shape education policies, institutions, and activities. It also aims to identify enablers of and constraints on policy change and implementation, as well as the achievement of results. In this context, the analysis encompasses how education policies are developed; how education consumables—such as curricula, textbooks, and learning materials—are produced, distributed, and used by learners; how education services are delivered and monitored; and how achieved results are measured. It includes the identification of the most influential actors in the education arena, as well as their vested interests. It also examines unfavorable frameworks for action that are likely to block the adoption of reforms and delay or derail their implementation. The system-level analysis presented in this volume used a mixed-method approach. Qualitative and quantitative analyses were conducted based on a review and analysis of more than 1,900 research papers, articles, and books; laws and policies; expenditures; trends; and enrollment and outcome indicators. Primary methods of inquiry were also used and included interviews, focus group discussions, and a household-based perception survey.

"Research sponsored by the American Association of State Highway and Transportation Officials in cooperation with the Federal Highway Administration."

In Regulation and Planning, planning scholars from the United Kingdom, France, Italy, Sweden, Canada, Australia, and the United States explore how planning regulations are negotiated amid layers of normative considerations. It treats regulation not simply as a set of legal guidelines to be compared against proposed actions, but as a social practice in which issues of governmental legitimacy, cultural understandings, materiality, and power are contested. Each chapter addresses an actual instance of planning regulation including, among others, a dispute about a proposed Apple store in a public park in Stockholm, the procedures by which building codes are managed by planners in Napoli, the role that design plays in regulating the use of public space in a new Paris neighbourhood, and the influence of plans

on the regulation of development in Malmö and Cambridge. Collectively, the volume probes the institutions and practices that give meaning and consequence to planning regulations. For planning students learning about what it means to plan, planning researchers striving to understand the influence of planners on urban development, and planning practitioners interested in reflecting on practices that occupy a great deal of their time, this is an indispensable book.

The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today's global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.

Achieving Sustainable Urban Form represents a major advance in the sustainable development debate. It presents research which defines elements of sustainable urban form - density, size, configuration, detailed design and quality - from macro to micro scale. Case studies from Europe, the USA and Australia are used to illustrate good practice within the fields of planning, urban design and architecture.

The Global Investment Competitiveness Report 2019-2020 provides novel analytical insights, empirical evidence, and actionable recommendations for governments seeking to enhance investor confidence in times of uncertainty. The report's findings and policy recommendations are organized around "3 ICs" - they provide guidance to governments on how to increase investments' contributions to their country's development, enhance investor confidence, and foster their economies' investment competitiveness. The report presents results of a new survey of more than 2,400 business executives representing FDI in 10 large developing countries: Brazil, China, India, Indonesia, Malaysia, Mexico, Nigeria, Thailand, Turkey, and Vietnam. The results show that over half of surveyed foreign businesses have already been adversely affected by policy uncertainty, experiencing a decrease in employment, firm productivity, or investment. Foreign investors report that supporting political environments, stable macroeconomic conditions, and conducive regulatory regimes are their top three investment decision factors. Moreover, the report's new global database of regulatory risk shows that predictability and transparency increase investor confidence and FDI flows. The report also assesses the impact of FDI on poverty, inequality, employment, and firm performance using evidence from various countries. It shows that FDI in developing countries yields benefits to their firms and citizens-including more and better-paid jobs-but governments need to be vigilant about possible adverse consequences on income distribution. The report is organized in 5 chapters: Chapter 1 presents the results of the foreign investor survey. Chapter 2 explores the differential performance and development impact of greenfield FDI, local firms acquired by multinational corporations (i.e. brownfield FDI), and domestically-owned firms using evidence from six countries. Chapter 3 assesses the impact of FDI on poverty, inequality, employment and wages, using case study evidence from Ethiopia, Turkey and Vietnam. Chapter 4 presents a new framework to measure FDI regulatory risk that is linked to specific legal and regulatory measures. Chapter 5 focuses on factors for increasing the effectiveness of investment promotion

agencies.

The Review of Maritime Transport is an UNCTAD flagship publication, published annually since 1968 with 2018 marking the 50 year anniversary. Around 80 per cent of the volume of international trade in goods is carried by sea, and the percentage is even higher for most developing countries. The Review of Maritime Transport provides an analysis of structural and cyclical changes affecting seaborne trade, ports and shipping, as well as an extensive collection of statistical information.

'Insight Guides has spawned many imitators but is still the best of its type.' - Wanderlust Magazine

In this edited volume, academics and practitioners from various disciplines investigate the challenges, opportunities and frameworks in the implementation of Smart Cities in the Gulf. The volume presents insightful analyses and identifies key lessons learned through case studies covering four main themes including smart city frameworks and governance, resources and infrastructure, information and communication technologies, and the social perspective. In doing so, the book provides policy recommendations related to smart governance, as well as overall frameworks that cities can adopt in their process of transition, and knowledge that is integral to bridge the gap between various stakeholders in the Smart City milieu. This edited volume comprises extended versions of papers presented at a workshop held at the University of Cambridge, UK titled "Smart Cities in the GCC: Current State, Opportunities and Challenges."

In consideration of the many challenges associated with Qatar's continued growth and demographic changes, the government of Qatar is interested in updating its school transportation system (STS). This volume assesses the perspectives of parents and school administrators on Qatar's STS, identifies a vision and goals for the STS, reviews international norms for school transportation, and discusses strategies to achieve the vision and better align Qatar's STS with international norms. The authors articulate four elements of a vision for Qatar's STS: Provide safe, efficient, and high-quality transportation for Qatar's students; support educational options by enabling mobility and access; provide a transportation experience that is supportive of Qatari values and culture; and minimize the impact on traffic

congestion and the environment. The authors recommend 13 strategies to help achieve this vision, such as establishing clearly marked schools zones with standardized safety features and establishing standards for licensing and training bus drivers. The authors also provide a preliminary evaluation of several other strategies with less certain costs and benefits, such as changing the composition of the school bus fleet, implementing bus stops, and staggering school start times. Written by S K S Singarum & Vinod Kumar, this book is nothing less than an essential guide for all those who are coming to Dubai for the first time. If you are from the Indian subcontinent, it is a little easier for you to understand and appreciate the local dress and other cultural traditions. But you need not worry if you are from a western country as this ultimate guide on Dubai will make you feel at home with all the information provided in this book. The book contains lots of illustrations to make it easier for the readers.

Lonely Planet's Oman, UAE & the Arabian Peninsula is your most up-to-date advice on what to see and skip, and what hidden discoveries await you. Feel the desert's allure in Sharqiya Sands, dine at the top of the world's tallest building, and see the masterpieces of the Museum of Islamic Art -all with your trusted travel companion.

Using simple language, this text explains the properties of light, its interaction with matter, and how it is used to develop optical components such as filters and multiplexers that have applications in optical communications. The text also introduces the evolving dense wavelength division multiplexing (DWDM) technology and communications systems. The economic activity that drives growth in developing countries is heavily concentrated in cities. Catchphrases such as “metropolitan areas are the engines that pull the national economy” turn out to be fairly accurate. But the same advantages of metropolitan areas that draw investment also draw migrants who need jobs and housing, lead to demands for better infrastructure and social services, and result in increased congestion, environmental harm, and social problems. The challenges for metropolitan public finance are to capture a share of the economic growth to adequately finance new and growing expenditures and to organize governance so that services can be delivered in a cost-effective way, giving the local population a voice in fiscal decision making. At the same time, care must be taken to avoid overregulation and overtaxation, which will hamper the now quite mobile economic engine of private investment and entrepreneurial initiative. Metropolitan planning has become a reality in most large urban areas, even though the planning agencies are often ineffective in moving things forward and in linking their plans with the fiscal and financial realities of metropolitan government. A growing number of success stories in metropolitan finance and management, together with accumulated experience and proper efforts and support, could be extended to a broader array of forward-looking programs to address the growing public service needs of metropolitan-area populations. Nevertheless, sweeping metropolitan-area fiscal reforms have been few and far between; the urban policy reform agenda is still a long one; and

there is a reasonable prospect that closing the gaps between what we know how to do and what is actually being done will continue to be difficult and slow. This book identifies the most important issues in metropolitan governance and finance in developing countries, describes the practice, explores the gap between practice and what theory suggests should be done, and lays out the reform paths that might be considered. Part of the solution will rest in rethinking expenditure assignments and instruments of finance. The “right” approach also will depend on the flexibility of political leaders to relinquish some control in order to find a better solution to the metropolitan finance problem.

Freedom in the World contains both comparative ratings and written narratives and is now the standard reference work for measuring the progress and decline in political rights and civil liberties on a global basis.

This book presents the latest thinking on the benefits and dangers of higher density urban living. It offers diverse opinions and research, from a wide range of disciplines, and gives an insight into both the theoretical debate and the practical challenges surrounding the compact city. Essential reading for anyone with an interest in sustainable urban development.

A Step-by-Step Guide to Showing the Value of Soft Skill Programs As organizations rise to meet the challenges of technological innovation, globalization, changing customer needs and perspectives, demographic shifts, and new work arrangements, their mastery of soft skills will likely be the defining difference between thriving and merely surviving. Yet few executives champion the expenditure of resources to develop these critical skills. Why is that and what can be done to change this thinking? For years, managers convinced executives that soft skills could not be measured and that the value of these programs should be taken on faith. Executives no longer buy that argument but demand the same financial impact and accountability from these functions as they do from all other areas of the organization. In Proving the Value of Soft Skills, measurement and evaluation experts Patti Phillips, Jack Phillips, and Rebecca Ray contend that efforts can and should be made to demonstrate the effect of soft skills. They also claim that a proven methodology exists to help practitioners articulate those effects so that stakeholders’ hearts and minds are shifted toward securing support for future efforts. This book reveals how to use the ROI Methodology to clearly show the impact and ROI of soft skills programs. The authors guide readers through an easy-to-apply process that includes: • business alignment • design evaluation • data collection • isolation of the program effects • cost capture • ROI calculations • results communication. Use this book to align your programs with organizational strategy, justify or enhance budgets, and build productive business partnerships. Included are job aids, sample plans, and detailed case studies.

The January 2016 edition of Global Economic Prospects discusses current global and regional economic developments and prospects, analyzing key challenges and opportunities confronting developing countries. This volume addresses, among other topics, spillovers from large emerging markets and macroeconomic vulnerabilities during resource development. Global Economic Prospects is a World Bank Group Flagship Report. Semiannually (January and June), it examines global economic developments and prospects, with a special focus on developing countries. The report includes analysis of topical policy challenges faced by developing countries through in-depth research in the January edition and shorter analytical pieces in the June edition.

Lonely Planet Dubai & Abu Dhabi Lonely Planet

Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

"Urban transportation in many towns and cities around the world is becoming a major concern, not only because of rising car ownership and the resulting congestion, but also because of increasing pollution and the consequences for community health. Although there have been

considerable technical advances in recent years in vehicle design, transportation systems and in the analysis of the environment, the efficient integration of transport systems within the fabric of towns and cities is complex with attendant social and environmental issues." "This book contains the proceedings of the First International Conference on Urban Transport and the Environment held in Southampton in June 1995. Over fifty papers were presented from authors around the world covering transport systems such as railways in cities and electric vehicles; planning aspects covering traffic restraint and 'infrastructure'; environmental aspects including vehicle emissions and urban noise; and future vision issues such as future urban travel demand, and new approaches to mobility."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc.
