

## Durand And Barlow Essentials Of Abnormal Psychology 6th Edition Ebook

Revised to reflect DSM-5, this briefer version of Durand and Barlow's widely taught text fully describes abnormal psychology through the authors' standard-setting integrative approach--the most modern, scientifically valid method for studying the subject. Through this approach, students learn that psychological disorders are rarely caused by a single influence, but rooted in the interaction among multiple factors: biological, psychological, cultural, social, familial, and even political. A conversational writing style, consistent pedagogy, and real case profiles--95 percent from the authors' own case files--provide a realistic context for the scientific findings of the book. In addition, these features ensure that readers never lose sight of the fact that real people are behind the DSM-5 criteria, the theories, and the research. Focusing on experimental methods, authors Anne Myers and Christine Hansen lead students step by step through the entire research process, from generating testable hypotheses to writing the research report. The major sections of the book parallel the major sections of a research report (Introduction, Method, Results, and Discussion), giving students the skills they'll need to design and conduct an experiment, analyze and interpret the research findings, and report those findings. Although the main focus is on experimentation, alternative approaches are discussed as important complements. Using cases from the authors' files or from case files of other working clinicians, CASEBOOK IN ABNORMAL PSYCHOLOGY, International Edition portrays the rich and arresting nature of disorders manifested in real people. Cases illustrate every major DSM-IV category, followed by a therapy outcome section that tells the "rest of the story" of what happened to these clients. Using an integrative approach, the authors emphasize the multiple causes of disorders and incorporate developmental and cultural issues in each case. Complex cases are presented without a diagnosis, so students can come up with a diagnosis on their own. This Fourth Edition includes a new case on body dysmorphic disorder as well as two new cases without a diagnosis.

Problem behaviors often compound the already difficult task of improving the lives of persons with severe disabilities. This important volume, representing the culmination of more than a decade of clinical research, presents the first complete description

of the procedures used in Functional Communication Training--a positive approach for reducing severe behavior problems. The procedures described in this book have been validated by numerous empirical studies for use with children, adolescents, and adults who display behaviors as diverse as aggression, self-injury, tantrums, and bizarre, psychotic speech. Functional Communication Training involves teaching students how to communicate those basic wants and needs that they have previously sought to have fulfilled via their problem behavior. They are taught to replace their challenging behavior with learned communication skills. This book provides the practitioner with step-by-step instructions for implementing this effective approach. A variety of assessment strategies are reviewed and described to assist in determining appropriate interventions. The Motivation Assessment Scale--one device designed to assess the function of problem behavior--is outlined in detail and is accompanied with guidelines for its administration and interpretation. Communication training is then detailed and illustrated using speech, sign language, and augmentative systems as examples. Numerous case examples throughout illuminate both the assessment and intervention strategies. Providing clear direction for ameliorating complex behavior problems, this book will be valued by psychologists, behavior analysts, special educators, and speech and language therapists. It can be used as a text for advanced undergraduate courses on behavior management in psychology and special education, and also serves as supplementary reading for courses on behavior modification or mental retardation/developmental disabilities.
