If you're like most sales leaders, your incentive program is a constant challenge, as you try to jumpstart sales, energize a geographically dispersed and autonomous workforce, and motivate salespeople to achieve ambitious revenue goals. And sometimes it seems like you just don't know what works; your products and markets are changing, the incentive program that was so successful last year no longer produces the desired results, or perhaps the generous incentive program you created has yielded a corps of highly paid salespeople who spend most of their time on existing clients and minimal time generating new business -- and threaten to walk away with your customer base if you scale back paychecks! Incentive programs are seductively powerful but complicated instruments. Without careful planning and implementation, they can be too stingy to motivate, too complex to understand, too quick to reward mediocre results, and too difficult to implement. But a well-designed and implemented incentive program is an essential tool for building a motivated, highly effective sales force that delivers the results you need.

This book presents an update on the means by which the problems of wear and loosening are being addressed in total hip arthroplasty (THA) and total knee arthroplasty (TKA). Included are chapters on new surgical techniques for difficult cases, nonpolyethylene interfaces for THA, custom hip prostheses, and computer-assisted surgery. *Arthroplasty 2000* also takes up current controversial issues such as posterior cruciate substitution versus retention in TKA.
