Nobel-Prize-winning economist Paul Krugman argues that business leaders need to understand the differences between economic policy on the national and international scale and business strategy on the organizational scale. Economists deal with the closed system of a national economy, whereas executives live in the open-system world of business. Moreover, economists know that an economy must be run on the basis of general principles, but businesspeople are forever in search of the particular brilliant strategy. Krugman's article serves to elucidate the world of economics for businesspeople who are so close to it and yet are continually frustrated by what they see. China's spectacular growth and poverty reduction has been accompanied by growing inequality which threatens the social compact and thus the political basis for economic growth. Chinese policy makers have realized the importance of the problem and have launched a series of investigations and policy initiatives to address the issues. The regional dimension of inequality—rural/urban and inland/coastal—dominates in a country as large as China, and especially with its particular history. Not surprisingly, regional inequality has come to loom

large in the policy debate in China. The policy debate has been informed by, and to some extent instigated by, a parallel analytical literature which has quantified the magnitude of the problem and identified recent trends, offered explanations based on rigorous analysis, and proposed policy interventions in light of the facts and understanding. Through a series of articles which have been published in leading journals, the editors have been involved in a systematic investigation into the nature and evolution of regional inequality in China for over a decade.

While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of *Financial Accounting: IFRS* highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt Financial have come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and problems that present students with foreign currency examples instead of solely U.S. dollars.

What do Eastern Europe's booming sex trade, America's subprime mortgage lending scandal, China's fake goods industry, and celebrity philanthropy in Africa have in common? With biopirates trolling the blood industry, fish-farming bandits ravaging the high seas, pornography developing virtually in Second Life, and games like *World of Warcraft* spawning online sweatshops, how are rogue industries transmuting into global empires? And will the entire system be transformed by the advent of sharia economics? With the precision of an economist and the narrative deftness of a storyteller, syndicated journalist Loretta Napoleoni examines how the world is being reshaped by dark economic forces, creating victims out of millions of ordinary people whose lives have become trapped inside a fantasy world of consumerism. Napoleoni reveals the architecture of our world, and in doing so provides fresh insight into many of the most insoluble problems of our era.

The economic success achieved in the last decade in East Asia has brought about a fundamental reorientation in the Western view of the region. In order to contribute to a better understanding of present events and future developments in the area, leading East Asia economists and men of experience in Asian business from Asia, America, and East and West Europe have written papers on their research or business fields for this volume. The individual articles deal with problems common to the East Asian region and the Pacific area as well as with specific economic problems of Japan, China and South Korea. The volume is divided into four parts: East Asia and the Pacific Basin includes articles on supra-national issues, for example on the international economic relations of Japan, China, Taiwan and Korea. Japan includes articles on Japanese industrial and business structure, technological policy, exports and other issues. China includes articles on structural change, economic reforms, fiscal policy, agriculture and other issues. Korea includes articles on economic and industrial policy, restructuring,

protectionism and other issues. The occasion of the publication of this volume is the 70th birthday of Willy Kraus, who for many years has been actively concerned with the questions of development in the East Asian region.

Modern economies become more and more open and the external sector of an economy becomes more and more important. This textbook aims at clarifying how an open economy functions, in particular at explaining the determinants of international flows of commodities and financial assets. It also aims at examining the effects of these flows on the domestic and international economy and the possible policy actions at the national and international level. Particular attention will be paid to the problems of international economic integration. Students will be able to read and interpret the balance of payments of a country, evaluating the various types of balance, to explain the behaviour of commercial flows in the light of the theories studied, to analyze flows of financial assets according to interest-rate differentials and other elements, to study the forces that determine exchange rates and cause currency crises, to understand the reasons behind international economic integration such as the European Union, to evaluate the effects of national and international policies.

It is predicted by some observers that the 21st century will be remembered as the Asian Century. Many of the countries in the region seem to be able to take the economic and trade baton when one of the others experiences problems. The articles presented in this book examine the current political and economic situations in nations across Asia, particularly focusing on economic developments. World Economic Outlook, October 2019

This is the first comprehensive study of the role of socialist countries within the international economic order. The author presents an overview of the emergence of the postwar economic order and examines the key features of three kinds of centrally planned economies. He then analyzes the role of financial frameworks and the international trade system in ensuring smooth economic relations among market-type economies and he details the problems of associating typical CPEs within them. Finally Jozef van Brabant explores the possibility of reconstituting a multilateral economic order that can provide greater security, predictability, stability and reliability in international economic relations. The Planned Economies and International Economic Organizations is written at a time when the Soviet Union and other centrally planned economies are seeking closer links with the mainstream world economy. It will therefore be of interest to governments and institutional economists as well as to students and specialists of Soviet and East European studies, international relations and comparative economics.
