On December 10, 1998, the world celebrated the 50th anniversary of the United Nations' Universal Declaration of Human Rights (UDHR). The U.S. Constitution possesses many of the political and civil rights articulated in the UDHR. The UDHR, however, goes further than the U.S. Constitution, including many social and economic rights as well. This book addresses the social and economic rights found in Articles 16 and 22 through 27 of the UDHR that are generally not recognized as human rights in the United States. The book begins with a brief history of economic, social, and cultural rights, as well as an essay, in question and answer format, that introduces these rights. Although cultural rights are interrelated and of equal importance as economic and social rights, the book primarily addresses justice regarding economic and social problems. After an introduction, the book is divided into the following parts: (1) "Economic, Social, and Cultural Rights Fundamentals"; (2) "Activities"; and (3) "Appendices." The nine activities in part 2 aim to help students further explore and learn about social and economic rights. The appendix contains human rights documents, a glossary of terms, a directory of resource organizations, and a bibliography of 80 web sites, publications and referrals to assist those eager to increase their

- New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, *Vox* “This is the ideal environmental

sciences textbook—only it is too interesting and inspiring to be called a textbook.”
—Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA
In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

digital platforms. A key feature of the evolving digital economy is the increasing role of digital data as an economic resource, together with digital platforms as new influential actors, with capacity to collect, process, analyze and monetize data. The report considers policy options for countries to help ensure that they capture a fair part of the value created in the digital economy for inclusive development. Key issues include the market impact of emerging technologies and digital platforms, the impact on smaller businesses in developing countries and the implications for infrastructure, entrepreneurship, skills, competition, data flows, data protection, taxation and other relevant policies.

“She offers something both broad and scarce: a compelling new story about how to create a desirable future.”—New York Times An award-winning author and leading international economist delivers a hard-hitting and much needed critique of modern capitalism in which she argues that, to solve the massive crises facing us, we must be innovative—we must use collaborative, mission-oriented thinking while also bringing a stakeholder view of public private partnerships which means not only taking risks together but also sharing the rewards. Capitalism is in crisis. The rich have gotten richer—the 1 percent, those with more than \$1 million, own 44 percent of the world's wealth—while climate change is transforming—and in some cases wiping out—life on the planet. We are plagued by crises threatening

our lives, and this situation is unsustainable. But how do we fix these problems decades in the making? Mission Economy looks at the grand challenges facing us in a radically new way. Global warming, pollution, dementia, obesity, gun violence, mobility—these environmental, health, and social dilemmas are huge, complex, and have no simple solutions. Mariana Mazzucato argues we need to think bigger and mobilize our resources in a way that is as bold as inspirational as the moon landing—this time to the most ‘wicked’ social problems of our time.. We can only begin to find answers if we fundamentally restructure capitalism to make it inclusive, sustainable, and driven by innovation that tackles concrete problems from the digital divide, to health pandemics, to our polluted cities. That means changing government tools and culture, creating new markers of corporate governance, and ensuring that corporations, society, and the government coalesce to share a common goal. We did it to go to the moon. We can do it again to fix our problems and improve the lives of every one of us. We simply can no longer afford not to.

Macroeconomics in ContextRoutledge

Stephen M. Ward is assistant professor at the University of Michigan in the Center for Afroamerican and African Studies and the Residential College.

This author calls for an end to excessive consumption by individuals and corporations and, at the same time, calls for an economy based on the needs of people, not businesses.

Macroeconomics in Context lays out the principles of macroeconomics in a manner that is thorough, up to date, and relevant to students. Like its counterpart, Microeconomics in Context, the book is attuned to economic realities--and it has a bargain price. The in Context books offer affordability, engaging treatment of high-interest topics from sustainability to financial crisis and rising inequality, and clear, straightforward presentation of economic theory. Policy issues are presented in context--historical, institutional, social, political, and ethical--and always with reference to human well-being.

A generation of outstanding European thinkers emerged out of the rubble of World War II. It was a group unparalleled in their probing of an age that had produced totalitarianism as a political norm, and the Holocaust as its supreme nightmarish achievement. Figures ranging from George Lichtheim, Ignazio Silone, Raymond Aron, Andrei Amalrik, among many others, found a home in Encounter. None stood taller or saw further than François Bondy of Zurich. In a moving tribute to his friend, Melvin J. Lasky, long-time editor of Encounter, writes, "Bondy was a breathtaking spectacle. I had known him to read and walk, to think and talk, all at once--and still make mental notes for his next article.... Early or late, seated or standing, awake or asleep, his incomparable spiritedness would always be darting from point to point, paying attention and idly wandering at once. Taken all in all, he still continues to represent for me perhaps a Henry Jamesian New Man." Bondy's essays themselves represent a broad sweep of major figures and events in the second half of the twentieth century. His spatial outreach went from Budapest to Tokyo and Paris. His political essays extended from George Kennan to Benito Mussolini. And his prime mÚtier, the cultural figures of Europe, covered Sartre, Kafka, Heidegger and Milosz. The analysis was uniformly fair minded but unstinting in its insights. Taken together, the variegated themes he raised in

his work as a Zurich journalist, a Paris editor, and a European homme de lettres sketch guidelines for an entrancing portrait of the intellectual as cosmopolitan. *European Notebooks* contains most of the articles that Bondy (1915-2003) wrote for *Encounter* under the stewardship of Stephen Spender, Irving Kristol, and then for the thirty years that Melvin Lasky served as editor. Bondy was that rare unattached intellectual, "free of every totalitarian temptation" and, as Lasky notes, unflinching in his devotion to the liberties and civilities of a humane social order. *European Notebooks* offers a window into a civilization that came to maturity during the period in which these essays were written.

Continuing his groundbreaking analysis of economic structures, Douglass North develops an analytical framework for explaining the ways in which institutions and institutional change affect the performance of economies, both at a given time and over time. Institutions exist, he argues, due to the uncertainties involved in human interaction; they are the constraints devised to structure that interaction. Yet, institutions vary widely in their consequences for economic performance; some economies develop institutions that produce growth and development, while others develop institutions that produce stagnation. North first explores the nature of institutions and explains the role of transaction and production costs in their development. The second part of the book deals with institutional change. Institutions create the incentive structure in an economy, and organisations will be created to take advantage of the opportunities provided within

a given institutional framework. North argues that the kinds of skills and knowledge fostered by the structure of an economy will shape the direction of change and gradually alter the institutional framework. He then explains how institutional development may lead to a path-dependent pattern of development. In the final part of the book, North explains the implications of this analysis for economic theory and economic history. He indicates how institutional analysis must be incorporated into neo-classical theory and explores the potential for the construction of a dynamic theory of long-term economic change. Douglass C. North is Director of the Center of Political Economy and Professor of Economics and History at Washington University in St. Louis. He is a past president of the Economic History Association and Western Economics Association and a Fellow, American Academy of Arts and Sciences. He has written over sixty articles for a variety of journals and is the author of *The Rise of the Western World: A New Economic History* (CUP, 1973, with R.P. Thomas) and *Structure and Change in Economic History* (Norton, 1981). Professor North is included in *Great Economists Since Keynes* edited by M. Blaug (CUP, 1988 paperback ed.)

Available for the first time, Victor Serge's intimate account of the last decade of his life gives a vivid look into the Franco-Russian revolutionary's life, from his liberation from Stalin's Russia to his "Mexico Years," when he wrote his greatest works. In 1936, Victor Serge—poet, novelist, and revolutionary—left the Soviet Union for Paris, the rare opponent of Stalin to escape the Terror. In 1940, after the Nazis marched into Paris,

Serge fled France for Mexico, where he would spend the rest of his life. His years in Mexico were marked by isolation, poverty, peril, and grief; his Notebooks, however, brim with resilience, curiosity, outrage, a passionate love of life, and superb writing. Serge paints haunting portraits of Osip Mandelstam, Stefan Zweig, and “the Old Man” Trotsky; argues with André Breton; and, awaiting his wife’s delayed arrival from Europe, writes her passionate love letters. He describes the sweep of the Mexican landscape, visits an erupting volcano, and immerses himself in the country’s history and culture. He looks back on his life and the fate of the Revolution. He broods on the course of the war and the world to come after. In the darkest of circumstances, he responds imaginatively, thinks critically, feels deeply, and finds reason to hope. Serge’s Notebooks were discovered in 2010 and appear here for the first time in their entirety in English. They are a message in a bottle from one of the great spirits, and great writers, of our shipwrecked time.

As the American economy surged in the 1990s, economic sociology made great strides as well. Economists and sociologists worked across disciplinary boundaries to study the booming market as both a product and a producer of culture, tracing the correlations they saw between economic and social phenomena. In the process, they debated the methodological issues that arose from their interdisciplinary perspectives. The New Economic Sociology provides an overview of these debates and assesses the state of the burgeoning discipline. The contributors summarize economic sociology's

accomplishments to date, identifying key theoretical problems and opportunities, and formulating strategies for future research in the field. The book opens with an introduction to the main debates and conceptual approaches in economic sociology. Contributor Neil Fligstein suggests that the current resurgence of interest in economic sociology is due to the way it brings together many sociological subdisciplines including the study of markets, households, labor markets, stratification, networks, and culture. Other contributors examine the role of economic phenomena from a network perspective. Ron Burt, for example, demonstrates how social relationships affect competitive dynamics in the marketplace. A third set of chapters addresses the role of gender in economic sociology. In her chapter, Barbara Reskin rethinks conventional notions about discrimination and points out that the law only covers one type of discrimination, while in recent years social scientists have uncovered other forms of hidden discrimination, which must be addressed as well. The *New Economic Sociology* also addresses the problem of economic development and change from a sociological perspective. Alejandro Portes and Margarita Mooney elaborate on one of the key emerging concepts in economic sociology, arguing that social capital—as an attribute of communities and regions—can contribute to economic and social well-being by fostering collaboration and entrepreneurship. The contributors concur that economic action must be interpreted through the cultural understandings that lend it stability and meaning. By rendering these often complex debates accessible, *The New Economic Sociology*

makes a significant contribution to this still rapidly developing field, and provides a useful guide for future avenues of research.

This handbook serves as a guide to deploying battery energy storage technologies, specifically for distributed energy resources and flexibility resources. Battery energy storage technology is the most promising, rapidly developed technology as it provides higher efficiency and ease of control. With energy transition through decarbonization and decentralization, energy storage plays a significant role to enhance grid efficiency by alleviating volatility from demand and supply. Energy storage also contributes to the grid integration of renewable energy and promotion of microgrid.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity*

This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Antonio Gramsci's Prison Notebooks is a remarkable work, not only because it was written in jail as the Italian Marxist thinker fell victim to political oppression in his home country, but also because it shows his impressive analytical ability. First published in 1948, 11 years after Gramsci's death, Prison Notebooks ably demonstrates that the writer has an innate ability to understand the relationship between different parts of an argument. This is how Gramsci manages to analyze such wide-ranging topics – capitalism, economics and culture – to explain historical developments. He introduces the idea of “hegemony,” the means by which ruling classes in a society gain, keep hold of and manage their power, and, by carefully looking at how society operates, he reveals the manner in which the powerful deploy a combination of force and manipulation to convince most

people that the existing social arrangement is logical and in their best interests – even when it isn't. Gramsci shows exactly how the ruling class maintains power by influencing both political institutions like the courts and the police, and civil institutions, such as churches, family and schools. His powerful analysis led him to the conclusion that change can only take place in two ways, either through revolution or through a slow but constant struggle to transform the belief system of the ruling classes.

The annual Index of Economic Freedom is a detailed, country-by-country analysis of the economies of more than 150 nations. For each country, it includes often hard-to-obtain 1998 data on taxes, foreign investment codes, tariffs, banking regulations, monetary policy, and more. The Index ranks economies according to how free they are. A country's score on the annual Index is a measure of its overall economic health and its prospects for growth.

The New York Times best-selling book exploring the counterproductive reactions white people have when their assumptions about race are challenged, and how these reactions maintain racial inequality. In this “vital, necessary, and beautiful book” (Michael Eric Dyson), antiracist educator Robin DiAngelo deftly illuminates the phenomenon of white fragility and “allows us to understand racism as a practice not restricted to ‘bad people’ (Claudia Rankine). Referring to the

defensive moves that white people make when challenged racially, white fragility is characterized by emotions such as anger, fear, and guilt, and by behaviors including argumentation and silence. These behaviors, in turn, function to reinstate white racial equilibrium and prevent any meaningful cross-racial dialogue. In this in-depth exploration, DiAngelo examines how white fragility develops, how it protects racial inequality, and what we can do to engage more constructively.

From the Preface: This manual, *Child Protective Services: A Guide for Caseworkers*, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and

concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based-including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.
