"Economics will never be able to move beyond these vague predictions because it treats human behavior - individual and social - as the product of expectations and preferences - beliefs and desires - the variables that cannot be measured independently of the actual choices we want to predict. These factors, combined with the economist's commitment to the search for equilibrium solutions to theoretical problems, condemn economic theory to permanent predictive weakness. In the end, Rosenberg's analysis is not merely a critique. His aim is to redefine the scope and value of neoclassical theory, suggesting that its character and most important accomplishments need to be correctly understood to defend economics against the charge that it is a science of diminishing returns."--BOOK JACKET.

What guidance does academic research really provide to economic policy development? The critical and analytical surveys in this volume investigate links between policies and outcomes by surveying work from broad macroeconomic policies to interventions in microfinance. Asserting that there are no universal correspondences between policies and outcomes, contributors demonstrate instead that only an intense familiarity with the development context and the universe of applicable economic models can generate successful policies. Getting cause-and-effect right is essential for policy design and implementation. With the goal of drawing researchers and policy makers closer, this volume highlights our increasing understanding of ways to combine economic theorizing with careful, thoughtful empirical work. \* Presents an accurate, self-contained survey of the current state of the field \* Summarizes the most recent discussions, and elucidates new developments \* Although original material is also included, the main aim is the provision of comprehensive and accessible surveys

Things get out of hand for a twelve-year-old boy when a neighbor convinces him to expand his summer lawn mowing business. "A truly excellent book that explains where our pandemic response went wrong, and how we can understand those failings using the tools of economics." —Tyler Cowen, Holbert L. Harris Chair of Economics at George Mason University and coauthor of the blog Marginal Revolution Have you ever stopped to wonder why hand sanitizer was missing from your pharmacy for months after the COVID-19 pandemic hit? Why some employers and employees were arguing over workers being re-hired during the first

COVID-19 lockdown? Why passenger airlines were able to get their own ring-fenced bailout from Congress? Economics in One Virus answers all these pandemic-related questions and many more, drawing on the dramatic events of 2020 to bring to life some of the most important principles of economic thought. Packed with supporting data and the best new academic evidence, those uninitiated in economics will be given a crash-course in the subject through the applied case-study of the COVID-19 pandemic, to help explain everything from why the U.S. was underprepared for the pandemic to how economists go about valuing the lives saved from lockdowns. After digesting this highly readable, fast-paced, and provocative virus-themed economic tour, readers will be able to make much better sense of the events that they've lived through. Perhaps more importantly, the insights on everything from the role of the price mechanism to trade and specialization will grant even those wholly new to economics the skills to think like an economist in their own lives and when evaluating the choices of their political leaders.

The winners of the Nobel Prize in Economics upend the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor borrow to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the *Wall Street Journal*, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

With over a million copies sold, *Economics in One Lesson* is an essential guide to the basics of economic theory. A fundamental influence on modern libertarianism, Hazlitt defends capitalism and the free market from economic myths that persist to this day. Considered among the leading economic thinkers of the “Austrian School,” which includes Carl Menger, Ludwig von Mises, Friedrich (F.A.) Hayek, and others, Henry Hazlitt (1894-1993), was a libertarian philosopher, an economist, and a journalist. He was the founding vice-president of the Foundation for Economic Education and an early editor of *The Freeman* magazine, an influential libertarian publication. Hazlitt wrote *Economics in One Lesson*, his seminal work, in 1946. Concise and instructive, it is also deceptively prescient and far-reaching in its efforts to dissemble economic fallacies that are so prevalent they have almost become a new orthodoxy. Economic commentators across the political spectrum have credited Hazlitt with foreseeing the collapse of the global economy which occurred more than 50 years after the initial publication of *Economics in One Lesson*. Hazlitt’s focus on non-governmental solutions, strong — and strongly reasoned — anti-deficit position, and general emphasis on free markets, economic liberty of individuals, and the dangers of government intervention make *Economics in One Lesson* every bit as relevant and valuable today as it has been since publication.

This book represents selected papers of an international conference convened by the Department of Humanities at Qatar University, Doha, in March 2013. Its theme was “Interdisciplinarity in History: An Old Method in New World Context”. Twelve out of the fifty papers presented at the conference have been thoroughly reviewed, revised and compiled in this volume. Their contributions emphasize that interdisciplinary in history has become a key term for professional historians who reject the professional identity of history based on its claimed autonomy and the distinctiveness of its research methods, and argue that this claim has seriously narrowed the intellectual horizons of the discipline in terms of both teaching and research. The chapters also stress that historical research should not be confined to political events as it was by ancient historians, but, rather, be open to other complex issues which require thorough investigation and collaboration between history and other disciplines. In this sense, interdisciplinarity in history is a process of answering questions, solving problems, or examining topics that are too broad or multifaceted to be tackled adequately by history as a discipline on its own. Therefore, history “should not be regarded as a stationary subject,” as Robinson wrote, but as a discipline that would transcend the limitations formerly imposed upon the study of the past, and integrate with other social science disciplines to widen its methodological scope and investigate many issues that had previously ignored or marginalized.

Sarnikar cites evidence of frequent misconceptions of economics amongst students, graduates, and even some economists, and argues that behavioral economists are uniquely qualified to investigate causes of poor learning in economics. She conducts a review of the economics education literature to identify gaps in current research efforts and suggests a two-pronged approach to fill the gaps: an engineering approach to the adoption of innovative teaching methods and a new research program to enhance economists' understanding of how learning occurs. To facilitate research into learning processes, Sarnikar provides an overview of selected learning theories from psychology, as well as new data on hidden misconceptions amongst beginning students of economics. She argues that if they ask the right questions, economists of all persuasions are likely to find surprising lessons in the answers of beginning students of economics.

The Middle East and North Africa (MENA) is a large, complex, and diverse region, which faces a wide range of economic issues. The MENA group includes Algeria, Bahrain, Cyprus, Djibouti, Egypt, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Libya, Morocco, Oman, Qatar, Saudi Arabia, Syria, Tunisia, Turkey, United Arab Emirates, and Yemen. The purpose of this book is not to provide a country-by-country study, but rather to deal with general economic themes found in Arab MENA and Israel, such as problems associated with growth and structural change; the role of State-intervention in country-specific local markets; labor market imperfections driven by gender bias; technology gaps and endogenous growth; capital market development in a restricted financial model based on religious constraints; savings and investment behaviour in a model of state subsidization and intervention designed to control local development; and the role of the state in constraining private sector activity. Data sources used in this second edition include country-specific data, the World Bank, the United Nations, the International Monetary Fund and the Organisation for Economic Co-operation and Development. The new material in this second edition includes a discussion of the impending and inevitable leadership changes which will occur throughout Arab MENA over the next decades. The evidence to support this evaluation is based on the current lack of transparent markets; the lack of inclusive macro policies, the impact of distortionary micro economic policies across all sectors; and the impact of anti-globalization and xenophobia on innovation. Old chapters are revised with updated data, a discussion of the role of the 'State' and 'Oligarchies' in the economies of most of the MENA countries, an in-depth exploration of the investment in human capital and growth and an identification of the most important binding constraints to economic development in Arab MENA and Israel. This book serves as both a textbook and a summary of the very large literature on MENA. It examines the economic realities of the region and compares them across the MENA economies. It should be stressed that this book is not about the latest political debate on who did what to whom in the Middle East or in North Africa. The focus is on economics, not political economics.

Since 1946, Henry Hazlitt's bestselling *Economics in One Lesson* has popularized the belief that economics can be boiled down to one simple lesson: market prices represent the true cost of everything. But one-lesson economics tells only half the story. It can explain why markets often work so well, but it can't explain why they often fail so badly--or what we should do when they stumble. As Nobel Prize-winning economist Paul Samuelson quipped, "When someone preaches 'Economics in one lesson,' I advise: Go back for the second lesson." In *Economics in Two Lessons*, John Quiggin teaches both lessons, offering a masterful introduction to the key ideas behind the successes--and failures--of free markets. *Economics in Two Lessons* explains why market prices often fail to reflect the full cost of our choices to society as a whole. For example, every time we drive a car, fly in a plane, or flick a light switch, we contribute to global warming. But, in the absence of a price on carbon emissions, the costs of our actions are borne by everyone else. In such cases, government action is needed to achieve better outcomes. Two-lesson economics means giving up the dogmatism of *laissez-faire* as well as the reflexive assumption that any economic problem can be solved by government action, since the right answer often involves a mixture of market forces and government policy. But the payoff is huge: understanding how markets actually work--and what to do when they don't. Brilliantly accessible, *Economics in Two Lessons* unlocks the essential issues at the heart of any economic question.

This collection of essays honors the life and work of one of the most prominent and fervent heterodox economists, Frederic S. Lee, who has been at the heart of the heterodox economics movements for the past three decades. Authors in this book demonstrate that heterodox economic has transcended the criticism of mainstream economics and, more importantly, that constructive developments are in the making by way of cross-communications among various heterodox economics traditions. Frederic S. Lee's contributions to heterodox economics are centered on three themes: the making of a history and identity of heterodox economics, heterodox microeconomics, and the heterodox analysis of social provisioning. Part I addresses the importance of history, theory, research methods, and institutions in the making of the

identity of heterodox economics as an alternative to mainstream economics. Part II delves into heterodox microeconomic theories—in particular, investment, pricing, competition, markets, and market governance—as foundations of heterodox macroeconomic analyses. Part III expands the analysis of the capitalist social provisioning process with an emphasis on its subsystems and their relationships over historical time. Part IV encapsulates the life and work of Frederic S. Lee. Throughout his intellectual life Frederic S. Lee has shown to many that the development of heterodox economics is rendered possible by unselfish and ceaseless efforts to build both theory and institutions. Essays in this book attest that establishing an alternative critical theory to the status quo is not only possible but also serviceable to the majority of the population.

Modern Labor Economics: Theory and Public Policy, now in its fourteenth edition, continues to be the leading text for one-semester courses in labor economics at the undergraduate and graduate levels.
