Microeconomics Judy Whitehead, 2020-07-30 Microeconomics is concerned with the production, consumption and distribution of goods by the micro units of individuals, firms and markets within the economy. It can also be considered a study of scarcity and the choices to be made for the attainment of goals within constraints. These goals are those set by consumers, producers and policy makers in the market. This book provides a brand new approach to the teaching and study of microeconomics - an elementary guide to the fundamental principles of the subject. It gives students from all parts of the world the opportunity to understand and appreciate the value of microeconomic tools and concepts for analyzing market processes in their economic environment, as well as maintaining a perspective on issues of trade and competitiveness, thus drawing attention to the relevance of microeconomic theory beyond the domestic scene to issues of trade and competitiveness on the international arena. The book contains a wealth of international case studies and covers topics such as: - elasticity - Cobb-Douglas Production functions - dynamic stability of market equilibrium - monopolies and monopolistic competition - project analysis The perfect introduction to the building blocks of contemporary microeconomic theory, this book will be of interest to undergraduate students in international economics, industrial economics, managerial economics and agricultural economics. It will also be a useful reference guide for graduates requiring a break down of difficult microeconomic principles.

Economic Development and the Division of Labor Xiaokai Yang, Jeffrey D. Sachs, 2008-04-15 This innovative new text from Jeffrey Sachs and Xiaokai Yang introduces students to development economics from the perspectives of inframarginal analysis and marginal analysis. The book demonstrates how the new-found emphasis on inframarginal analysis has influenced a shift back to an interest in Classical Economics from Neoclassical Economics. Inframarginal Analysis vs. Marginal Analysis is presented as a consistent theoretical framework throughout. Shows how the relationship of Inframarginal Analysis to Marginal Analysis has influenced the shift back to an interest in Classical Economics from Neoclassical Economics with regard to economic development. Allows economists to reduce their overall reliance on marginal analysis, which may be less relevant to development economics than it is to the economics of development countries. Brings considerable analytic machinery to bear on important problems. A focus on institutions and transaction costs that is very relevant to development economics. Offers a thorough analysis of trade (CHs. 3 - 7) and macroeconomics (CHs. 16 - 19), both of which are not dealt with in depth by comparable textbooks.
