Feedback in Online Course for Non-Native English-Speaking Students is an investigation of the effectiveness of audio and text feedback provided in English in an online course for non-native English-speaking students. The study presents results showing how audio and text feedback can impact on non-native English-speaking students' higher-order learning as they participate in an asynchronous online course. It also discusses the results of how students perceive both types of the feedback provided. In addition, the study examines how the impact and perceptions differ when the instructor giving the feedback is a non-native English-speaking teacher or a native English-speaking teacher. Finally, the study discusses pedagogical implications and suggestions for instructors and designers in creating online learning environments as it relates to asynchronous online courses that include non-native English-speaking students. The students who participated in this study include non-native English-speaking students from a university in northern Siberia, Russia. An extended literature review of audio and text feedback in different learning environments is used to refer to

the possible effectiveness of feedback expected in an online course. Feedback in Online Course for Non-Native English-Speaking Students provides empirical evidence that could assist online courses administrators in making appropriate assessment of non-native English-speaking students' online learning.

Hiroaki Kobayashi has trained 1500 mariners in ship handling over twenty years and he has systematized the methods of safe navigation into nine elemental techniques. Taking a rigorous and scientific look at good practice and attitudes, good seamanship can be viewed as a series of concrete technical functions, which can be in terms of competencies. By giving proper attention to human factors the conditions for maintaining system safety can be defined, and the interaction of human competencies and environmental conditions and their effects on system safety can be recognised. System safety in turn depends on good bridge team management, with particular emphasis on communication, cooperation and leadership – communication for the exchange of information, cooperation to smooth team activities, and leadership to ensure that each member of the team performs successfully.

This practical book contains over 100 different speaking exercises, including interviews, guessing games, problem solving, role play and story telling with accompanying photocopiable worksheets.

Academic Days of Timișoara: Language Education Today is a book of the proceedings of the 3rd International Symposium "Language Education Today: Between Theory and Practice" held in Timișoara, Romania, on May 6–7, 2011, under the auspices of the Romanian Academy. Since its original publication in 1968, Rivers's comprehensive and practical text has become a standard reference for both student teachers and veteran instructors. All who wish to draw from the most recent thinking in the field will welcome this new edition. Methodology is appraised, followed up by discussions on such matters as keeping students of differing abilities active, evaluating textbooks, using language labs creatively, and preparing effective exercises and drills. The author ends each chapter of this new edition with questions for research and discussion—a useful classroom tool—and provides an up-to-date bibliography that facilitates further understanding of such matters as the bilingual classroom.

A comprehensive, practical guide to writing and speaking clearly, effectively, and persuasively shows how to get one's point across; how to organize memos, letters, and reports; and how to

remember and deliver successful presentations. UP.

There are currently an estimated 2 billion English learners in the world. In many countries, schools now require English classes. However, after years of studying English, students still have difficulty speaking English. When speaking, proper grammar can be useless if speaking is not clear and understood by the listener. It is time to try something different because the current methods are not effectively working. Learning English grammar rules is not enough, and it is impossible to memorize every English conversation. Situations will be different, and making unique conversations is necessary in the real world.

Information and Communication Technology (ICT) is an extended term for Information Technology (IT) which stresses the role of unified communications. The term ICT is also used to refer to the convergence of audio-visual and telephone networks with computer networks through a single cabling or link system. There are large economic incentives (huge cost savings due to elimination of the telephone network) to merge the telephone network with the computer network system using a single unified system of cabling, signal distribution and management. However, ICT has no universal definition, as "the concepts, methods and applications involved in ICT are constantly evolving on an almost daily basis". The broadness of ICT covers any product that will store, retrieve, manipulate, transmit or receive information electronically in a digital form, e.g. personal computers, digital television, email, robots. For clarity, Zuppo provided an ICT hierarchy where all levels of the hierarchy "contain some degree of commonality in that they are related to technologies that facilitate the transfer of information and various types of electronically mediated communications". Skills Framework for the Information Age is one of many models for describing and managing competencies for ICT professionals for the 21st century. Physical education, also known as Phys Ed., PE, Gym or Gym class, and known in many Commonwealth countries as physical training or PT, is an educational course related of maintaining the human body through physical exercises (i.e. calisthenics). It is taken during primary and secondary education and encourages psychomotor learning in a play or movement exploration setting to promote health. Information and Communication Technologies (ICT) in the field of physical education by the professed and the students. Finally the main problems related to the use of these technologies in classrooms are analyzed. All this in order t to shed light on a very topical issue regarding the education of our youth. Studies show that ICTs are increasingly present in the field of physical education, but much remains to be done to make an effective use of them in education.
