Award-winning Michiel Heyns returns with a richly textured novel set in contemporary South Africa. The murder of a beautiful

woman shatters the rural village peace of Alfredville, and her husband, the police station commander, is jailed as chief suspect. Her cousin Peter, a freelance writer in London, returns to South Africa for the first time in decades -- unsettled, curious, but also in search of a career-defining story. On checking into the Queen's Hotel he finds that things are not as straightforward as he imagined, and South Africa is not as he left it. His carefully ordered world is thrown into turmoil as his trip dredges up a long-abandoned past, forcing him to question the assumptions so easily held from the comfort of his London flat. He meets a mixture of locals, visitors, vagrants and migrants, but most momentously, Peter discovers that his bosom friend from school, Bennie Nienaber, is still in Alfredville -- and is in fact now, acting station commander at the local police station. Peter re-establishes an awkward friendship with his erstwhile friend and the two warily circle each other, sharing reminiscences that hint at a bond much deeper than nostalgia. As Peter abandons the neatly patterned story he had planned and is forced to participate in a community that he once despised, he begins to reconsider his place in the world. In search of Desirée's story, he now starts to rewrite his own -- till events take an even more shocking turn. . . This book explores questions of xenophobia and prejudice, of national, sexual and personal identity, and what it means to be a foreigner wherever you go.

Fransjohan Pretorius and his team of leading historians provide a gripping, nuanced picture of life in the camps, investigating the fate of all those affected by this contentious policy."--Jacket.

For some, recycling is a big business; for others a moralised way of engaging with the world. But, for many, this is a dangerous way of earning a living. With scrap now being the largest export category from the US to China, the sheer scale of this global trade has not yet been clearly identified or analysed. Combining fine-grained ethnographic analysis with overviews of international material flows, *Economies of Recycling* radically changes the way we understand global and local economies as well as the new social relations and identities created by recycling processes. Following global material chains, this groundbreaking book reveals astonishing connections between persons, households, cities and global regions as objects are reworked, taken to pieces and traded. With case studies from Africa, Latin America, South Asia, China, the former Soviet Union, North America and Europe, this timely collection debunks common linear understandings of production, exchange and consumption and argues for a complete re-evaluation of North-South economic relationships.

Thomas is moving to a new house, and he hates the idea with a passion. Even though his stepmother, Louisa, is quite cool, having a new half-brother or -sister is something Thomas is definitely not looking forward to. To make matters worse, the house they are going to live in is an ancient Victorian place.

In September of 1893, Norwegian zoologist Fridtjof Nansen and a crew manned the schooner *Fram*, intending to drift, frozen in the Arctic pack-ice, to the North Pole. When it became clear that they would miss the pole, Nansen and his companion Hjalmar Johansen struck off by themselves. Racing the shrinking pack-ice, they attempted, by dog-sled, to go "farthest north." They survived a winter in a moss hut eating walruses and polar bears, and the public assumed they were dead. In the spring of 1896, after three years of trekking, and having made it to within four degrees of the pole, they returned to safety. Nansen's narrative stands with the best writing on polar exploration.

The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.
