These 55 contributions celebrate the lasting impact that McCulloch had on the study of the brain and the formal modeling of human intelligence. W. S. McCulloch, a professor of psychiatry at Illinois, later a scientist at the Research Laboratory of Electronics at MIT and author of the groundbreaking book, *Embodiments of Mind* (reissued in paperback in 1988), was one of the founding fathers of Cybernetics. Along with Norbert Wiener, John von Neumann, and H. von Foerster, he sought to integrate the disciplines of neurophysiology, mathematics, and engineering in a rigorous investigation into what brains do and how they do it. A magnetic personality, McCulloch set thoughts into motion (for instance neural nets as parallel computers) that have sparked research and controversy for decades. These 55 contributions celebrate the lasting impact that McCulloch had on the study of the brain and the formal modeling of human intelligence. They cover a number of varied topics in the general area of neural modeling and are divided into five sections: Essays and General Brain Theory, Mathematical Tools and Global Models, Neurons and Neural Nets, Vision, and AI and Engineering related topics. Contributors H. von Foerster, Michael Arbib, James A. Anderson, Shun-ichi Amari, Kunihiko Fukushima, Shunsuke Sato,

Paul Cull, and Gregory Mulhauser

This second edition of Bench aids for the diagnosis of intestinal parasites is intended both as a practical tool for the diagnosis of intestinal parasitic infections for laboratory and field workers and as a teaching aid for students and trainees. The plates are arranged on two sides: the recto with microphotographs for the identification of eggs larvae trophozoites cysts and oocysts occurring in faeces and the verso dedicated to the different copromicroscopical methods (procedures) and main staining techniques used in parasitology. Special attention has been devoted to all graphical and pictorial contents. The decision to include the outline of an *Ascaris lumbricoides* egg in its relative size next to each parasitic structure fulfils the intention of visualizing the actual dimensions that the eye needs to be looking for when examining the specimens with a microscope. For each image the size of the parasite and a short description are provided to assist in the microscopical identification. Two summary plates one for helminths and the other for protozoa are also included to provide a visual overview of the different presentations of parasitic elements. The bench aids have been produced in a weatherproof plastic-sealed format that is robust and easy to use at the bench. They are recommended for use by all health workers engaged in the routine

diagnosis of intestinal parasitic infections.

The book that you hold in your hands or on the screen of any technological device is the result of the effort made by a group of professors with the collaboration of professionals in different universities and study centres in twenty-five countries. Its title is already revealing: *Social Work in the 21st Century*. It is remarkable the coordination of professors Concepción Nieto-Morales and Monica Solange De Martino Bermúdez for readers to know not only the curriculum of Social Work in each of the countries that appear, but also the profile of the student body and the identification and reflection on the challenges that the 21st century poses to the teaching of the profession, among other elements. Being a social worker in these times requires a previous awareness before starting the long road that begins with academic training and ends with the daily work linked to people who need help; they need us to help them to conquer their rights. There is something else. Social problems over the years seem not to change their name: homeless; drug addicts, minors... but we must know that the internal dynamics of these marginalized groups evolve over time. We must act according to today's situation, with today's schemes, otherwise the essence of social work will disappear.

Esta obra pretende reunir los conflictos con más proyección mediática desde el final de la Guerra Fría, sobre todo

aquellos en los que Estados Unidos está implicado directamente. Pretende desentrañar los procesos de manipulación de la información, de desinformación y de propaganda que acompañan a los conflictos armados. Busca en estas guerras los modelos y formas de la más moderna propaganda, los cuales en realidad no difieren tanto de lo que muchos llaman vieja propaganda. Intenta describir y analizar las técnicas de manipulación de la opinión pública y el manejo inteligente de la comunicación. Nos sorprendería comprobar cómo podemos ser engañados una y otra vez con la más absoluta impunidad- desde la guerra del Golfo de 1991 y sus antecedentes desde el punto de vista de la comunicación (Vietnam, Malvinas, Grenada y Panamá), hasta la guerra de resistencia a la ocupación en Irak, pasando por los conflictos de la ex Yugoslavia en la década de los noventa, así como por algunos significativos conflictos africanos, naturalmente por el terrorismo, los grandes atentados, la guerra de Afganistán, sin olvidar el conflicto palestino-israelí (sobre todo la segunda Intifada).

It is well established that memory for emotional information is generally better than for neutral information. This Research Topic comprises a set of papers focusing on memory and its relation with motivational and emotional processes, ranging from electroencephalographic evidences of emotional modulation of memory systems, to the role of neurotransmitters/neuromodulators (i.e. endocannabinoid, glucocorticoid, serotonin, noradrenergic, dopaminergic systems), and second messengers on emotional memory, and the specific involvement of cerebral areas on the relation between memory and motivational/emotional processes (i.e. prefrontal cortex, amygdala, accumbens). In particular, some of the topics discussed in this Research Topic will include: cortical activity correlates of emotional modulation of memory systems, interactions between ascending vagal fibers and

central noradrenergic systems in modulating memory for emotionally arousing events, involvement of prefrontal /accumbal catecholamine system in processing emotional and motivational salience, role of both negative and positive emotional arousal in increasing persistence of consolidated memories through modulation of second messengers and the involvement of emotional arousal in the activation of amygdala projections, that can then modulate different types of memory.

This book combines detailed scientific historical research with characteristic philosophic breadth and verve.

Once a central concept in anthropology, syncretism has recently re-emerged as a valuable tool for understanding the complex dynamics of ethnicity, postcolonialism, and transnationalism. Building on a century-long tradition of scholarship, this important book formulates a broader view of the mixing and interpenetration of religious beliefs and practices, primarily from Africa and Europe, highlighting the ways in which religions and cultures on both sides of the Atlantic have been assimilated and innovatively changed. Divided into four sections, the book focuses on religious syncretism in Brazil, Jamaica, and other parts of the Caribbean and West Africa. Greenfield and Droogers have brought together an array of outstanding international scholars whose rich and varied essays on specific geographical locales and customs comprise an innovative and comprehensive view of the transference of religious traditions and their continuity and reformulation on two continents.

Plant-Pathogen Interactions: Methods and Protocols, Second Edition expands upon the first edition with current, detailed protocols for the study of plant pathogen genome sequences. It contains new chapters on

techniques to help identify and characterize effectors and to study their impacts on host immunity and their roles in pathogen biology. Additional chapters focus on protocols to identify avirulence and resistance genes, investigate the roles of effector targets and other defence-associated proteins in plant immunity. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, *Plant-Pathogen Interactions: Methods and Protocols, Second Edition* seeks to aid scientists in the further study of plant immunity.

PCR is the most powerful technique currently used in molecular biology. It enables the scientist to quickly replicate DNA and RNA on the benchtop. From its discovery in the early 80's, PCR has blossomed into a method that enables everything from ready mutation of DNA/RNA to speedy analysis of tens of thousands of nucleotide sequences daily. *PCR Applications* examines the latest developments in this field. It is the third book in the series, building on the previous publications *PCR Protocols* and

PCR Strategies. The manual discusses techniques that focus on gene discovery, genomics, and DNA array technology, which are contributing factors to the now-occurring bioinformatics boom. Key Features * Focuses on gene discovery, genomics, and DNA array technology * Covers quantitative PCR techniques, including the use of standards and kinetic analysis includes statistical refinement of primer design parameters * Illustrates techniques used in microscopic tissue samples, such as single cell PCR, whole cell PCR, laser capture microdissection, and in situ PCR Entries provide information on: * Nomenclature * Expression * Sequence analysis * Structure and function * Electrophysiology * Parmacology * Information retrieval
