"You can be lonely anywhere, but there is a particular flavor to the loneliness that comes from living in a city, surrounded by thousands of strangers. The Lonely City is a roving cultural history of urban loneliness, centered on the ultimate city: Manhattan, that teeming island of gneiss, concrete, and glass. What does it mean to be lonely? How do we live, if we're not intimately involved with another human being? How do we connect with other people, particularly if our sexuality or physical body is considered deviant or damaged? Does technology draw us closer together or trap us behind screens? Olivia Laing explores these questions by travelling deep into the work and lives of some of the century's most original artists, among them Andy Warhol, David Wojnarowicz, Edward Hopper, Henry Darger and Klaus Nomi. Part memoir, part biography, part dazzling work of cultural criticism, The Lonely City is not just a map, but a celebration of the state of loneliness. It's a voyage out to a strange and sometimes lovely island, adrift from the larger continent of human experience, but visited by many - millions, say - of souls"--

With the growing incidence of fragility fractures in Europe and North America over the last three decades, bone loss and osteoporosis have become active areas of research in skeletal biology. Bone loss is associated with aging in both sexes and is accelerated in women with the onset of menopause. However, bone loss is related to a suite of complex and often synergistically related factors including genetics,

pathology, nutrition, mechanical usage, and lifestyle. It is not surprising that its incidence and severity vary among populations. There has been increasing interest to investigate bone loss and osteoporosis from an anthropological perspective that utilizes a biocultural approach. Biocultural approaches recognize the inter-relationship between biological, cultural, and environmental variables. Anthropological studies also highlight the value of evolutionary and population approaches to the study of bone loss. These approaches are particularly suited to elucidate the multifactorial etiology of bone loss. The idea for this volume came out of a symposium organized by the editors at the 70th annual meeting of The American Association of Physical Anthropologists in Kansas City, Missouri. Many of the symposium participants, along with several additional leading scientists involved in bone and osteoporosis research, are brought together in this volume. Each chapter focuses on a different aspect of bone loss and fragility with a fresh and stimulating perspective.

Africa encompasses a multitude of environments and biomes that require specific scientific strategies – from desktop studies to field research to laboratory analysis – to tackle research questions that may range from the emergence of early humans to the ethnoarchaeological investigation. In several areas, turmoil, social instability and security constraints hamper or limit field activities and long-term funded programs. The kidnapping of German colleagues and the tragic death of two local collaborators in Nigeria urge to rethink our agenda and challenge our view of current research practice. This 1st Workshop on "Archaeology in Africa", organized by Sapienza University of Rome, convened several researches from Italy or Italy-based researchers. The aim was to present and discuss theoretical, methodological and financial problems for Africanist researchers today. In a global perspective, the synergy between research groups is crucial. The need to intensify the national and international cooperation is also an essential step. This book collects a selection of the different perspectives presented to the workshop, mostly focussing from North Africa and East Africa.
