This book explores the growing importance of prisons, both lay and ecclesiastical, in western Europe between 1000 and 1300. It attempts to explain what captors hoped to achieve by restricting the liberty of others, the means of confinement available to them, and why there was an increasingly close link between captivity and suspected criminal activity. It discusses conditions within prisons, the means of release open to some captives, and writing in or about prison.

This book explains the theory, components, and practical applications of systems in turboprop, turbojet, and turbofan aircraft. The author clearly examines electrical, turbine engine, lubrication and cooling, and other systems.
