This volume is authored by Rajat K. Baisya, alumnus of the department of Food Technology and Biochemical Engineering and a distinguished scholar, author and management consultant. The foundations of Jadavpur university and its origins as a technological institution imagined in a nationalist mould, established as a counter to the colonial British education and as a part of the movement for independence, are relatively well-known. What is less explored is the journey that the National Council of Education underwent to transform itself into the Jadavpur University. As a premier institution of higher learning in India at the present time, Jadavpur University has a number of stalwart professors to thank for its worldwide reputation. This book covers the biographies of twenty-two such professors of the Faculty of Engineering and Technology. Written from the 'technological perspective', the book attempts to trace a form of history of Jadavpur University through the microhistories of the individuals responsible for its beginnings and subsequent growth.

Often the details of new media get lost in an alphabet soup that usually begins with an "i" - the iPod, the iPad, the iTouch. Yet the essence of new media is not in these devices, but in their use. This short primer shows engineers how to think about new media by focusing on the deeper issues of communicating in this new user-generated era. Readers will grasp the mindset of new media; an understanding that will long outlast the latest social networking tools. It will empower practicing engineers to develop new, powerful ways to help the public to understand what engineers do and why engineering is important; but perhaps most importantly it gives engineers the foundation for reaching the next generation of innovative engineers.
