Literacy - the ability to produce and interpret written text - has long been viewed as the basis of all school achievement; a measure of success that defines both an 'educated' person, and an educable one. In this volume, a team of leading experts raise questions central to the acquisition of literacy. Why do children with similar classroom experiences show different levels of educational achievement? And why do these differences in literacy, and ultimately employability, persist? By looking critically at the western view of a 'literate' person, the authors present a perspective on literary acquisition, viewing it as a socially constructed skill, whereby children must acquire discourse strategies that are socially 'approved'. This extensively-revised second edition contains an updated introduction and bibliography. This volume will continue to have far-reaching implications for educational theory and practice.

The Psychology Express undergraduate revision guide series will help you understand key concepts quickly, revise effectively and make your answers stand out.

"A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszez and Kleiner, 2001 The most important corporate resource over the next few years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology- Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges, recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their presence in India owing to the increasing cost pressures in US and Europe. This has increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India by the year 2012 and demand will out-pace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower. Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to "fit in" with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the

same pool of talent and skills as their foreign counterparts to remain competitive and survive in global and domestic markets.

This book undertakes a general framework within which to consider the complex nature of the writing task in English, both as a first, and as a second language. The volume explores varieties of writing, different purposes for learning to write extended text, and cross-cultural variation among second-language writers. The volume overviews textlinguistic research, explores process approaches to writing, discusses writing for professional purposes, and contrastive rhetoric. It proposes a model for text construction as well as a framework for a more general theory of writing. Later chapters, organised around seventy-five themes for writing instruction are devoted to the teaching of writing at the beginning, intermediate, and advanced levels. Writing assessment and other means for responding to writing are also discussed. William Grabe and Robert Kaplan summarise various theoretical strands that have been recently explored by applied linguists and other writing researchers, and draw these strands together into a coherent overview of the nature of written text. Finally they suggest methods for the teaching of writing consistent with the nature, processes and social context of writing.

This volume explores both historical and current issues in English usage guides or style manuals. Guides of this sort have a long history: while Fowler's Modern English Usage (1926) is one of the best known, the first English usage guide was published in the UK in 1770, and the first in the US in 1847. Today, new titles come out nearly every year, while older works are revised and reissued. Remarkably, however, the kind of usage problems that have been addressed over the years are very much the same, and attitudes towards them are slow to change - but they do change. The chapters in this book look at how and why these guides are compiled, and by whom; what sort of advice they contain; how they differ from grammars and dictionaries; how attitudes to usage change; and why institutions such as the BBC need their own style guide. The volume will appeal not only to researchers and students in sociolinguistics, but also to general readers with an interest in questions of usage and prescriptivism, language professionals such as teachers and editors, and language policy makers.

This book treats the major issues of assessment and access as they relate to the Hispanic communities of the United States. For the purpose of increasing Hispanic access to higher education, it explores a variety of developments in educational assessment and test familiarization, both theoretical and practical. There are contributions to this volume from researchers and test specialists from the higher education community and the Educational Testing Service. The book is divided into four parts: an analysis of the major elements and issues that affect Hispanic performance on tests and influence Hispanic access to higher education; a review of several critical elements in test-construction as they affect Hispanics; an analysis of the factors related to testing and Hispanic access into the teaching profession; and a research, evaluation, and historical orientation to the issues involved in the development of a landmark educational product jointly conceived and produced by the College Board, the Educational Testing Service, and the Hispanic Higher Education Coalition: TestSkills: A Kit for Teachers of Hispanic Students.

This book presents original, empirical data from quantitative and qualitative research studies in the field of language learning aptitude, ability, and individual differences. It does so from the perspectives of Second Language Acquisition, psychology, neuroscience and sociolinguistics. All studies included in the book use a similar and uniform layout and methodology. Each chapter contains a study examining factors such as memory, personality, self-concept, bilingualism and multilingualism, education, musicality or gender. The chapters investigate the influence of these concepts on language learning aptitude and ability. Several of these chapters analyse hypotheses which have never been tested before and therefore provide novel research results. The book contributes to the field both by verifying and contesting existent findings and by exploring novel approaches to devising research in the subject area.
