This is the first full-length study to examine the links between high Romantic literature and what has often been thought of as a merely popular genre - the Gothic. Michael Gamer offers a sharply focused analysis of how and why Romantic writers drew on Gothic conventions whilst, at the same time, denying their influence in order to claim critical respectability. He shows how the reception of Gothic literature, including its institutional and commercial recognition as a form of literature, played a fundamental role in the development of Romanticism as an ideology. In doing so he examines the early history of the Romantic movement and its assumptions about literary value, and the politics of reading, writing and reception at the end of the eighteenth century. As a whole the book makes an original contribution to our understanding of genre, tracing the impact of reception, marketing and audience on its formation.

Why are people loyal? How do groups form and how do they create incentives for their members to abide by group norms? Until now, economics has only been able to partially answer these questions. In this groundbreaking work, Paul Frijters presents a new unified theory of human behaviour. To do so, he incorporates comprehensive yet tractable definitions of love and power, and the dynamics of groups and networks, into the traditional mainstream economic view. The result is an enhanced view of human societies that nevertheless retains the pursuit of self-interest at its core. This book provides a digestible but comprehensive theory of our socioeconomic system, which condenses its immense complexity into simplified representations. The result both illuminates humanity's history and suggests ways forward for policies today, in areas as diverse as poverty reduction and tax compliance.

A practical step-by-step introduction to the analysis of English grammar, taking an integrated approach to function and structure.
