case, and followed by thoughtful questions to enhance learning. The cases, previously unpublished, are written by an international group of experienced case writers from the field of finance, and deal with real companies, real problems, and currently unfolding issues. A case teaching manual geared to finance in general, and short cases in particular, is provided for the instructor and includes specific tips, techniques, and activities for each case in the text. Written for upper level undergraduate students of entrepreneurship, this highly accessible book breaks down complex concepts, and includes hands-on cases and exercises, making learning a breeze!

More extensive regulations, new technologies, and new means of communication have significantly changed the financing landscape for startups and small to medium-sized companies (SMEs). Incorporating qualitative, quantitative and mixed analytical

methods, the book contributes to a better understanding of the financing world by reflecting both the researcher's and the practitioner's perspective.

uncertainty and financial decisions. Stresses the importance of strategy in new venture planning. Develops real-world context through relevant examples. Spreadsheet modeling and simulation using custom software provides hands-on learning. Advances in Entrepreneurial Finance brings together contributions from researchers from the fields of entrepreneurship, behavioral finance, psychology, and neuroscience to shed new light on the dynamics of decision making and risk taking by entrepreneurs and venture capitalists (VCs). Every new venture requires access to capital at competitive interest rates, and much has been written on general entrepreneurship by management scholars and financial contracting by financial economists using traditional finance theory with all its highly restrictive assumptions regarding decision makers' cognitive capabilities and behavior. But recent developments in behavioral finance can now be applied to understand how entrepreneurs and VCs perceive risk and uncertainty and how they decide and act accordingly. Showcasing the latest research, this volume demonstrates that findings from the behavioral and neuroscience arenas can and do explain decision making by entrepreneurs and venture investors in the real world. Consequently, such findings have practical implications not only for entrepreneurs, venture

capitalists, and their advisors, but also all government agencies and NGOs that want to support product and technological innovation, capital formation, job creation, and economic development.

ENTREPRENEURIAL FINANCE, 6e, guides readers through a complete life cycle of the firm as it introduces the theories, knowledge, and corporate finance tools and techniques an entrepreneur needs to start, build, and eventually harvest a successful venture. With a strong emphasis on sound financial management practices, it explains how to secure financing, use business cash flow models, and strategically position the early-stage company. It also covers how to effectively interact with financial institutions and regulatory agencies that can affect venture growth and enable liquidity for investors. In-depth capstone cases, mini-cases, and examples vividly illustrate such key concepts as venture capital funds, institutional investors, strategic alliances, the role of business angels, licensing agreements, exit strategies, and much more. Entrepreneurial finance is a discipline that studies financial resource mobilization, resource allocation, risk moderation, optimization in financial contracting, value creation, and value monetization within the context of entrepreneurship. However, without proper strategic consideration the discipline is incomplete. This book examines how the activity of entrepreneurial finance can be enhanced via a concentration on value creation and through improved strategic decision-making. The most unique feature of the book is its focus on value creation. For entrepreneurs, value creation is not a one-off activity, but rather a continuous cycle of incremental improvements across a wide range of business activities. Entrepreneurial value creation is described in four comprehensive stages: value creation, value measurement, value enhancement, and value realization, referred to as the C-MER model. This book

focuses on what creates value rather than merely presenting value creation in a straight accounting framework. At the same time, deliberate and tactical planning and implementation ensure that the firm does not ignore the components necessary for it to survive and flourish. Vigorous strategic deliberations maximize the entrepreneurial firm's chances of making the right business decisions for the future, enable the firm to manage its available financial and non-financial resources in the most optimal manner, ensure that the necessary capital is secured to progress the development of the firm to its desired development level, and build value. While financial considerations are important, the field of strategic entrepreneurial finance represents a fusion of three disciplines: strategic management, financial management, and entrepreneurship. This orientation represents a natural evolution of scholarship to combine specific domains and paradigms of naturally connected business disciplines and reflects the need to simultaneously examine business topics from different perspectives which may better encapsulate actual entrepreneurial practices. Timely, practical, comprehensive manual for financing entrepreneurial ventures, with a strong European perspective.

The book is also an idea reference for entrepreneurs, business managers, market analysts, and decision makers who require information about the theoretical and quantitative aspects of entrepreneurial finance. Entrepreneurship is now unanimously considered a

major engine for socio-economic development, mainly because it creates jobs and innovation. Governments around the world pay special attention to removing entrepreneurial barriers in order to support development via different policies, especially entrepreneurial finance. Developing, emerging and transition economies (DETEs) significantly differ from industrialized countries because of their specific conditions: institutions, infrastructure facilities, and bureaucratic procedures within the administrative system. Thus, firms and their entrepreneurs in and from DETEs may behave differently, particularly in terms of their financial strategies. Therefore, contextualizing is critical to better understand the relationship between entrepreneurial finance, innovation, and development in DETEs. This book provides a systematic and profound understanding of how finance, entrepreneurship, innovation, and their interactions contribute to economic development in DETEs, which cover a large number of countries in Asia, Central and Eastern Europe, Latin America, and Africa. The book mainly includes empirical studies and is divided into four parts. Part A includes four chapters which adopt a multinational approach to examine different sources and types of finance for entrepreneurship and small business in different groups of countries classified as DETEs. Part B also includes four chapters and focuses on entrepreneurial finance in specific countries belonging to the DETEs. Part C goes beyond the business scope of entrepreneurial finance and includes three chapters concerned with the relationship between finance, women's entrepreneurship,

and poverty. Part D includes three chapters focusing on the comparison within developing countries as well as between developing and developed countries. This essential and comprehensive resource will find an audience amongst academics, students, educators, and practitioners, as well as policymakers and regulators. An increase in the restrictions on the availability of funding for new and growing businesses in the aftermath of the global financial crisis has been accompanied by the emergence and growth of crowdfunding as an alternative method of raising capital. Crowdfunding contributes towards the disintermediation of the finance market as funders and promoters are brought together directly, democratising both fundraising by businesses and investment by individuals. This book extends entrepreneurial finance research to the study of crowdfunding. Contributions review the history, status and future of crowdfunding, analyse the patterns of fundraising, assess the potential of crowdfunding for the financing of social ventures in particular, and discuss the regulatory implications of recent developments. What is clear from this collection is that the crowdfunding space is still evolving, institutional forms are still developing as models are refined, new institutional collaborations (e.g. between equity platforms and business angel networks) are emerging, and new challenges, particularly regulatory challenges, are being encountered. While crowdfunding is not a universal solution for SME finance in a post-crisis financial landscape, it remains too early to determine whether crowdfunding represents a large-scale transformation of the early stage risk capital market

or a minor addition to it. This book was originally published as a special issue of *Venture Capital*. This book examines the proliferation of new sources of entrepreneurial finance and how these sources have the potential to make it easier for ventures to raise capital and grow. To date, entrepreneurial finance literature has developed a rich tradition of research on venture capital and angel finance. However, the emergence of 'new' sources of finance – such as crowdfunding – and the limited attention paid to 'traditional' debt financing and financial bootstrapping offer opportunities to explore, from different points of view and theoretical perspectives, the challenges that ventures face. The objective of this book is to explore these new and traditional sources of finance; suggest how these phenomena can be better understood conceptually; and guide new ways of understanding the topic in future, especially for researchers. The introduction outlines the new sources of entrepreneurial finance, and in comparing them with more traditional sources, proposes challenges in our conceptual understanding of these new and traditional sources. The subsequent chapters deal with important topics, including looking at the way different funding sources may interact; factors that impede family firms from getting external funding; how best to succeed with equity crowdfunding by looking at pre-selection processes; considering differences in perceptions towards funding sources arising from whether entrepreneurs are native born or immigrants; factors to consider when funding specialized assets in high uncertain sectors such as biotechnology; and the

internationalization of business angel activity. This book was originally published as a special issue of the Venture Capital journal.

Financing Entrepreneurship and Innovation in Emerging Markets offers an original perspective on the links between macro data on innovation, data on micro-entrepreneurial processes and venture capital supply. The authors synthesize two disparate fields of research and thinking—innovation and entrepreneurship and economics—to illuminate how domestic companies compete and the business environment in which entrepreneurial firms operate. Its broad scope and firm linkages between processes at different levels leapfrogs research topics. For those investigating entrepreneurship and innovation in the early stages of economic development, this book demonstrates how micro and

macro foundations of productivity, and hence economic growth and development, are inextricably intertwined. Combines macro and micro perspectives on innovation processes Reveals how economic growth and development are inextricably intertwined Uses case studies to portray the entrepreneurial firm and its role in accelerating the speed of innovation and dissemination of new technologies Identifies common flaws undermining public venture programs, including poor design, a lack of understanding for the entrepreneurial process and implementation problems
