Geeky Pedagogy is a funny, evidence-based, multidisciplinary, pragmatic, highly readable guide to the process of learning and relearning how to be an effective college teacher. It is the first college teaching guide that encourages faculty to embrace their inner nerd, inviting readers to view themselves and their teaching work in light of contemporary discourse that celebrates increasingly diverse geek culture and explores stereotypes about super-smart introverts. Geeky Pedagogy avoids the excessive jargon, humorlessness, and endless proscriptions that plague much published advice about teaching. Neuhaus is aware of how embodied identity and employment status shape one's teaching context, and she eschews formulaic depictions of idealized exemplar teaching, instead inviting readers to join her in an engaging, critically reflective conversation about the vicissitudes of teaching and learning in higher education as a geek, introvert, or nerd. Written for the wonks and eggheads who want to translate their vast scholarly expertise into authentic student learning, Geeky Pedagogy is packed with practical advice and encouragement for increasing readers' pedagogical knowledge

Archer's *Global Warming: Understanding the Forecast 2nd Edition*, is the first real text to present the science and policy surrounding climate change at the right level. Accompanying videos, simulations and instructional support makes it easier to build a syllabus to improve and create new material on climate change. Archer's polished writing style makes the text entertaining while the improved pedagogy helps better understand key concepts, ideas and terms. This edition has been revised and reformulated with a new chapter template of short chapter introductions, study questions at the end, and critical thinking puzzlers throughout. Also a new asset for the BCS was created that will give ideas for assignments and topics for essays and other projects. Furthermore, a number of interactive models have been built to help understand the science and systems behind the processes.

The Guide to Graduate Environmental Programs provides over 160 profiles of graduate programs across the country that offer curricula related to the environment. Because it was impossible to include every program in the book, and because these

programs are constantly changing, Island Press welcomes suggested changes and additions to the profiles. While Island Press is not the official "author" of the book, we are eager to receive new or updated information to be included in the next edition. Drawing from this information, Island Press has created an online listing of programs that were not profiled in the book. To submit your contribution, either fill out the postcard included in the book itself, or e-mail the name, address, phone number, and e-mail address of the "contact person" for that program; someone will contact that person for further information as the second edition is developed. If you would like to correct an error or to provide specific "update" information, please e-mail that information or return the card included in the book. Following is a description of how the book was researched and the profiles compiled: The research process began with a list, drawn up by career center staff at University of California at Santa Barbara, of 412 environmental programs, departments, and schools within universities across the country. The list was based on a literature search, queries over the Internet, and contact with environmental professionals and associations. Certificate-only programs were not included. Selection preference was given to programs mentioned repeatedly by environmental professionals, and to those drawing a more diverse student body. Postcards requesting information and course catalogues were sent to all 412 programs. A survey was mailed to faculty representing each program. Of the 412 graduate programs queried, 156 programs completed and returned their surveys. Each completed survey was reworked into a profile. Schools that did not respond to the mailing were contacted twice by phone to remind them to return the survey. To supplement this information, and to ensure that the most noteworthy programs were included in the guide, additional profiles were compiled for a select number of key programs that failed to return their surveys. These latter profiles were based on literature review and personal interviews. In all, each program was contacted three times – once by mail and twice by phone – to encourage them to submit their surveys, and to verify and update information. The absence of a particular profile, or segment of a profile, reflects no editorial judgement on the part of the authors. Rather, if a specific program was not profiled, the most likely explanation is that the program in question did not return its survey. If you have information on other graduate environmental programs, please pass that information on to us, so that we can include them in future editions of the guide. Most of the information provided was accurate as of November 1994 – the date by which the surveys were completed – and some follow-up verification was conducted during the summer of 1996, before the book went into production. There are an ever-expanding number of programs in the environmental field, and existing programs are constantly evolving. Readers should therefore expect to continue to encounter ongoing changes in names, titles, and phone numbers.

Environmental Studies pertain to a systematic analysis of the natural and man-made world encompassing various scientific, economic, social and ethical aspects. Human impacts leading to large-scale degradation of the environment have aroused global concern on environmental issues in the recent years. The apex court has hence, issued a directive to impart environmental literacy to all. In this book the fundamental concepts of environmental studies have been introduced and analyzed in a simple manner strictly as per the module syllabus designed by the UGC for undergraduate courses in science, humanities, engineering, medicine, pharmacy, commerce, management and law. Besides the undergraduate students of all disciplines the book will also be useful for those appearing in various competitive exams since environmental issues now find a focus in most of such examinations. The contents of the book will be of interest to all educationists, planners and policy makers. Key features of the book include a simple and holistic approach with illustrations, tables and specific case studies mainly in the Indian context. The basic terminologies have been defined in the text while introducing the topics and some useful terms mentioned in the text have been explained in the glossary for an easy grasp by students of all disciplines.
