Until recently, economists studying economic development have tended to consider it as a universal process, or focussed their attention on common aspects. This book originates from the growing recognition of significant sectoral differences in economic development and examines the catching-up process in five different economic sectors: pharmaceuticals, telecommunications equipment, semiconductors, software, and agro-food industries. Each of these sector studies explore the learning and catch-up processes in various developing countries, in order to identify both the common features, and those which differ significantly across sectors and nations. The authors pay particular attention to China, India, Brazil, Korea and Taiwan. Edited by two of the leading scholars in the field, this book will prove to be invaluable for academics and postgraduate students interested in economic and technological development, and evolutionary economics.

With all of the advice and information available on the internet, empowered Buyers want insight. They need to find out what all of the information means. But how do you challenge the customer's thinking with insight, without challenging the customer? That's the question this book seeks to answer. You'll learn why insights are more likely to make it past the Buyer's defensive wall if they are hidden inside an insight scenario, like a Trojan horse. And because they transport the Buyer out of the role of a critic, and into the role of a participant, they trump verbal persuasion. We'll show you how to create insight scenarios. Just imagine if your prospective customers could step inside a buying simulator, and take your product out for a test drive. Could you ask for more?

Have we entered the age of NoOps infrastructures? Hardly. Old-style system administrators may be disappearing in the face of automation and cloud computing, but operations have become more significant than ever. As this O'Reilly Radar Report explains, we're moving into a more complex arrangement known as "DevOps." Mike Loukides, O'Reilly's VP of Content Strategy, provides an incisive look into this new world of operations, where IT specialists are becoming part of the development team. In an environment with thousands of servers, these specialists now write the code that maintains the infrastructure. Even applications that run in the cloud have to be resilient and fault tolerant, need to be monitored, and must adjust to huge swings in load. That was underscored by Amazon's EBS outage last year. From the discussions at O'Reilly's Velocity Conference, it's evident that many operations specialists are quickly adapting to the DevOps reality. But as a whole, the industry has just scratched the surface. This report tells you why.

Technology is a tool; if you can't harness the power of the people in your organization to use that tool correctly, you've lost. We posed a question to ourselves, our team of lifetime change professionals, and some of our favorite Fortune 500 technology execs: "What do you wish you had known when you started your toughest technology project?" The result is The Technology Change Book. In this book, we pair common challenges with our prescriptions—things we learned during our many years, on the ground, enabling successful technology initiatives.
