The Korean labour migration system has expanded since the mid-2000s, primarily in the admission of temporary foreign workers for less skilled jobs. Its temporary labour programme, addressed largely at SMEs in manufacturing and based on bilateral agreements with origin countries, has become the largest such programme in the OECD. Structural changes in the labour force, with a rapidly shrinking and highly educated youth population, keep the underlying demand for this programme strong. Yet skills levels of workers are increasing, and there is interest in increasing Korea's share in global talent mobility, including international students and innovative entrepreneurs. This book addresses the question of how to ensure that international recruitment can help meet urgent needs in the labour market which cannot be met locally, and how the temporary labour migration programme - and other migration streams - can evolve to ensure that Korea meets its policy objectives. This review first examines the characteristics of the Korean labour market and main challenges where labour migration can help address demand. Following a discussion of various programmes and procedures, the review assesses how labour migration is playing a role in different sectors and how programme governance could be improved. It then explores the channels for high-skilled migrants and how these could be improved in light of international experience.

In just 12 weeks you can develop a more robust vocabulary and speak Korean more fluently with My Weekly Korean Vocabulary!

The phenomenon returns! Originally published in 1987, *The Book of Questions*, a New York Times bestseller, has been completely revised and updated to incorporate the myriad cultural shifts and hot-button issues of the past twenty-five years, making it current and even more appealing. This is a book for personal growth, a tool for deepening relationships, a lively conversation starter for the family dinner table, a fun way to pass the time in the car. It poses over 300 questions that invite people to explore the most fascinating of subjects: themselves and how they really feel about the world. The revised edition includes more than 100 all-new questions that delve into such topics as the disappearing border between man and machine—How would you react if you learned that a sad and beautiful poem that touched you deeply had been written by a computer? The challenges of being a parent—Would you completely rewrite your child's college-application essays if it would help him get into a better school? The never-endingly interesting topic of sex—Would you be willing to give up sex for a year if you knew it would give you a much deeper sense of peace than you now have? And of course the meaning of it all—If you were handed an envelope with the date of your death inside, and you knew you could do nothing to alter your fate, would you look? *The Book of Questions* may be the only publication that challenges—and even changes—the way you view the world, without offering a single opinion of its own.

Discovering Discrete Dynamical Systems is a mathematics textbook designed for use in a student-led, inquiry-based course for advanced mathematics majors. Fourteen modules each with an opening exploration, a short exposition and related exercises, and a concluding project guide students to self-discovery on topics such as fixed points and their classifications, chaos and fractals, Julia and Mandelbrot sets in the complex plane, and symbolic dynamics. Topics have been carefully chosen as a means for developing student persistence and skill in exploration, conjecture, and generalization while at the same time providing a coherent introduction to the fundamentals of discrete dynamical systems. This book is written for undergraduate students with the prerequisites for a first analysis course, and it can easily be used by any faculty member in a mathematics department, regardless of area of expertise. Each module starts with an exploration in which the students are asked an open-ended question. This allows the students to make discoveries which lead them to formulate the questions that will be addressed in the exposition and exercises of the module. The exposition is brief and has been written with the intent that a student who has taken, or is ready to take, a course in analysis can read the material independently. The exposition concludes with exercises which have been designed to both illustrate and explore in more depth the ideas covered in the exposition. Each module concludes with a

project in which students bring the ideas from the module to bear on a more challenging or in-depth problem. A section entitled "To the Instructor" includes suggestions on how to structure a course in order to realize the inquiry-based intent of the book. The book has also been used successfully as the basis for an independent study course and as a supplementary text for an analysis course with traditional content.
