Over the last twenty years phraseology has become an important field of pure and applied research in Western European and North American linguistics. In this book the world's leading specialists examine the crucial role played by ready-made word-combinations in language acquisition and adult language use. After a wide-ranging introduction, the book presents full, critical accounts of the main theoretical approaches, analyses the corpus data and phrase typology, and finally considers the application of phraseology to associated disciplines including lexicography, language learning, stylistics, and computational analysis. This is the first comprehensive and up-to-date account of the subject to be published in English.

This book presents a modern introduction to analytical and numerical techniques for solving ordinary differential equations (ODEs). Contrary to the traditional format—the theorem-and-proof format—the book is focusing on analytical and numerical methods. The book supplies a variety of problems and examples, ranging from the elementary to the advanced level, to introduce and study the mathematics of ODEs. The analytical part of the book deals with solution techniques for scalar first-order and second-order linear ODEs, and systems of linear ODEs—with a special focus on the Laplace transform, operator techniques and power series solutions. In the numerical part, theoretical and practical aspects of Runge-Kutta methods for solving initial-value problems and shooting methods for linear two-point boundary-value problems are considered. The book is intended as a primary text for courses on the theory of ODEs and numerical treatment of ODEs for advanced undergraduate and early graduate students. It is assumed that the reader has a basic grasp of elementary calculus, in particular methods of integration, and of numerical analysis. Physicists, chemists, biologists, computer scientists and engineers whose work involves solving ODEs will also find the book useful as a reference work and tool for independent study. The book has been prepared within the framework of a German–Iranian research project on mathematical methods for ODEs, which was started in early 2012.

Formulaic sequences (FS) are now recognized as an essential element of language use. However, research on FS has generally been limited to a focus on description, or on the place of FS in L1 acquisition. This volume opens new directions in FS research, concentrating on how FS are acquired and processed by the mind, both in the L1 and L2. The ten original studies in the volume illustrate the L2 acquisition of FS, the relationship between L1 and L2 FS, the relationship between corpus recurrence of FS and their psycholinguistic reality, the processes involved in reading FS, and pedagogical issues in teaching FS. The studies use a wide range of methodologies, many of them innovative, and thus the volume serves as a model for future research in the area. The volume begins with three survey chapters offering a background on the characteristics and measurement of FS.

This an excellent introduction to psycholinguistics for applied linguists and language teachers

This book re-examines the notion of word associations, more precisely collocations. It attempts to come to a potentially more generally applicable definition of collocation and how to best extract, identify and measure collocations. The book highlights the role played by (i) automatic linguistic annotation (part-of-speech tagging, syntactic parsing, etc.), (ii) using semantic criteria to facilitate the identification of collocations, (iii) multi-word structured, instead of the widespread assumption of bipartite collocational structures, for capturing the intricacies of the phenomenon of syntagmatic attraction, (iv) considering collocation and valency as near neighbours in the lexis-grammar continuum and (v) the mathematical properties of statistical association measures in the automatic extraction of collocations from corpora. This book is an ideal guide to the use of statistics in collocation analysis and lexicography, as well as a practical text to the development

of skills in the application of computational lexicography. *Lexical Collocation Analysis: Advances and Applications* begins with a proposal for integrating both collocational and valency phenomena within the overarching theoretical framework of construction grammar. Next the book makes the case for integrating advances in syntactic parsing and in collocational analysis. Chapter 3 offers an innovative look at complementing corpus data and dictionaries in the identification of specific types of collocations consisting of restricted predicate-argument combinations. This strategy complements corpus collocational data with network analysis techniques applied to dictionary entries. Chapter 4 explains the potential of collocational graphs and networks both as a visualization tool and as an analytical technique. Chapter 5 introduces MERGE (Multi-word Expressions from the Recursive Grouping of Elements), a data-driven approach to the identification and extraction of multi-word expressions from corpora. Finally the book concludes with an analysis and evaluation of factors influencing the performance of collocation extraction methods in parsed corpora.

The approximation of a linear autonomous differential equation with a small delay is considered in *Approximation of a Linear Autonomous Differential Equation with Small Delay*; the model of infection diseases by Marchuk is studied in *Around the Model of Infection Disease: The Cauchy Matrix and Its Properties*. Exact solutions to fractional-order Fokker–Planck equations are presented in *New Exact Solutions and Conservation Laws to the Fractional-Order Fokker–Planck Equations*, and a spectral collocation approach to solving a class of time-fractional stochastic heat equations driven by Brownian motion is constructed in *A Collocation Approach for Solving Time-Fractional Stochastic Heat Equation Driven by an Additive Noise*. A finite difference approximation method for a space fractional convection-diffusion model with variable coefficients is proposed in *Finite Difference Approximation Method for a Space Fractional Convection–Diffusion Equation with Variable Coefficients*; existence results for a nonlinear fractional difference equation with delay and impulses are established in *On Nonlinear Fractional Difference Equation with Delay and Impulses*. Collocations are combinations of words which frequently appear together. Using them makes your English sound more natural. Presents and explains approximately 1,500 word combinations in typical contexts using tables, charts, short texts and dialogues.

The purpose of this volume is to present a snapshot of the state of the art of research on the languages of the Maltese islands, which include spoken Maltese, Maltese English and Maltese Sign Language. Malta is a tiny, but densely populated country, with over 422,000 inhabitants spread over only 316 square kilometers. It is a bilingual country, with Maltese and English enjoying the status of official languages. Maltese is a descendant of Arabic, but due to the history of the island, it has borrowed extensively from Sicilian, Italian and English. Furthermore, local dialects still coexist alongside the official standard language. The status of English as a second language dates back to British colonial rule, and just as in other former British colonies, a characteristic Maltese variety of English has developed. To these languages must be added Maltese Sign Language, which is the language of the Maltese Deaf community. This was recently recognised as Malta's third official language by an act of Parliament in 2016. While a volume such as the present one can hardly do justice to all aspects of a diverse and complex linguistic situation, even in a small community like that of Malta, our aim in editing this book was to shed light on the main strands of research being undertaken in the Maltese linguistic context. Six of the contributions in this book focus on Maltese and explore a broad range of topics including: historical changes in the Maltese sound system; syllabification strategies; the interaction of prosody and gesture; the constraints regulating /t/-insertion; the productivity of derivational suffixes; and raising phenomena. The study of Maltese English, especially with the purpose of establishing the defining characteristics of this variety of English, is a relatively new area of research. Three of the papers in this volume deal with Maltese English, which is explored from the different perspectives of rhythm, the syntax of nominal phrases, and lexical choice. The last contribution discusses the way in which Maltese Sign Language (LSM) has evolved alongside developments in LSM research. In summary, we believe the present volume has the potential to present a unique snapshot of a complex linguistic situation in a geographically restricted area. Given the

nature and range of topics proposed, the volume will likely be of interest to researchers in both theoretical and comparative linguistics, as well as those working with experimental and corpus-based methodologies. Our hope is that the studies presented here will also serve to pave the way for further research on the languages of Malta, encouraging researchers to also take new directions, including the exploration of variation and sociolinguistic factors which, while often raised as explanatory constructs in the papers presented here, remain under-researched.

Master's Thesis from the year 2020 in the subject English Language and Literature Studies - Linguistics, grade: 9 and 12, , course: Master of Arts in Linguistic Science, language: English, abstract: This study has analysed the grammatical errors pupils make when writing English Compositions. This study paper aimed at investigating the grammatical errors committed by grade 9 and 12 pupils in English compositions. The study had the overall goal of identifying the kind of grammatical rules the pupils break. These errors hinder learners from understanding the language and sometimes block or slow down communication. The objectives of the study were: 1. to discover types of grammatical errors that learners make when writing compositions and 2. to discuss rules that were broken for pupils to commit such errors. The research design was a mixed method design which involved both qualitative and quantitative methodologies. Its targeted population was twenty-five (25) teachers of English and one hundred (100) grade 9 and 12 pupils from five selected secondary schools. Random sampling technique was used to arrive at Pupils to be included in the sample. Data for this research was collected using semi-structured interviews and written composition scripts. The compositions were marked with the help of other language teachers. Data was analysed and presented thematically using tables, graphs and discussions of findings. Composition scripts from the pupils were analyzed by looking at the types of errors made. The findings of the research revealed that the common grammar errors committed by secondary school pupils in Petauke District are: Verb tense, subject- verb agreement, pronoun, spellings, word order, and use of articles, double negative, preposition, and wrong word. It was also discovered that Pupils break grammar rules to make grammatical errors. The findings of this research may inform educators and language material developers about the grammatical errors pupils make and the rules they break to make such errors. The findings might also serve as guidance to teachers on how to assist learners to become better sentence writers. Ultimately, the project ends with conclusion and recommendations.

Errors in Language Learning and Use is an up-to-date introduction and guide to the study of errors in language, and is also a critical survey of previous work. Error Analysis occupies a central position within Applied Linguistics, and seeks to clarify questions such as 'Does correctness matter?', 'Is it more important to speak fluently and write imaginatively or to communicate one's message?' Carl James provides a scholarly and well-illustrated theoretical and historical background to the field of Error Analysis. The reader is led from definitions of error and related concepts, to categorization of types of linguistic deviance, discussion of error gravities, the utility of teacher correction and towards writing learner profiles. Throughout, the text is guided by considerable practical experience in language education in a range of classroom contexts worldwide.

The book addresses issues in the field of teaching academic writing to non-native speakers. This book provides a series of discussions about multiple aspects of second language writing, presenting chapters that collectively address a range of issues that are important to new teachers at the post-secondary level. The 13 chapters provide scholarly visions, insight, and interpretation, oriented toward explaining the field of teaching academic writing to non-native speakers. The book is designed to provide foundational content-knowledge in this area, with each chapter authored by recognized experts in the field. In addition to helping train new teachers, the book will serve as an updated reference book for practicing teachers and scholars to consult.

Treatment of Error offers a realistic, well-reasoned account of what teachers of multilingual writers need to know about error and how to put what they know to use. As in the first edition, Ferris again persuasively addresses the fundamental error treatment questions that plague novice and expert writing specialists alike: What types of errors should teachers respond to? When should we respond to them? What are the most efficacious ways of responding to them? And ultimately, what role should error treatment play in the teaching of the process of writing? The second edition improves upon the first by exploring changes in the field since 2002, such as the growing diversity in what is called "L2 writers," the blurring boundaries between "native" and "non-native" speakers of English, the influence of genre studies and corpus linguistics on the teaching of writing, and the need the move beyond "error" to "second language development" in terms of approaching students and their texts. It also explores what teacher preparation programs need to do to train teachers to treat student error. The second edition features \* an updating of the literature in all chapters \* a new chapter on academic language development \* a postscript on how to integrate error treatment/language development suggestions in Chapters 4-6 into a writing class syllabus \* the addition of discussion/analysis questions at the end of each chapter, plus suggested readings, to make the book more useful in pedagogy or teacher development workshops

The theme of the conference this year was Critical CALL, drawing inspiration from the work carried out in the broader field of Critical Applied Linguistics. The term 'critical' has many possible interpretations, and as Pennycook (2001) outlines, has many concerns. It was from these that we decided on the conference theme, in particular the notion that we should question the assumptions that lie at the basis of our praxis, ideas that have become 'naturalized' and are not called into question. Over 200 presentations were delivered in 68 different sessions, both in English and Italian, on topics related specifically to the theme and also more general CALL topics. 94 of these were submitted as extended papers and appear in this volume of proceedings.

Collocations are both pervasive in language and difficult for language learners, even at an advanced level. In this book, these difficulties are for the first time comprehensively investigated. On the basis of a learner corpus, idiosyncratic collocation use by learners is uncovered, the building material of learner collocations examined, and the factors that contribute to the difficulty of certain groups of collocations identified. An extensive discussion of the implications of the results for the foreign language classroom is also presented, and the contentious issue of the relation of corpus linguistic research and language teaching is thus extended to learner corpus analysis.

This book discusses a variety of topics in mathematics and engineering as well as their applications, clearly explaining the mathematical concepts in the simplest possible way and illustrating them with a number of solved examples. The topics include real and complex analysis, special functions and analytic number theory, q-series, Ramanujan's mathematics, fractional calculus, Clifford and harmonic analysis, graph theory, complex analysis, complex dynamical systems, complex function spaces and operator theory, geometric analysis of complex manifolds, geometric function theory, Riemannian surfaces, Teichmüller spaces and Kleinian groups, engineering applications of complex analytic methods, nonlinear analysis, inequality theory, potential theory, partial differential equations, numerical analysis, fixed-point theory, variational inequality, equilibrium problems, optimization problems, stability of functional equations, and mathematical physics. It includes papers presented at the 24th International Conference on Finite or Infinite Dimensional Complex Analysis and Applications (24ICFIDCAA), held at the Anand International College of Engineering, Jaipur, 22–26 August 2016. The book is a valuable resource for researchers in real and complex analysis. In keeping with the spirit of the first edition, *Teaching ESL Composition: Purpose, Process, and Practice, Second Edition* presents pedagogical approaches to the teaching of ESL composition in the framework of current theoretical perspectives on second language writing processes, practices, and writers. The text as a whole moves from general themes to specific pedagogical concerns. A primary goal is to offer a synthesis of theory and practice in a rapidly evolving community of scholars and professionals. The focus is on providing apprentice teachers with practice activities that can be used to develop the complex skills involved in teaching second language writing. Although all topics are firmly grounded in reviews of relevant research, a distinguishing feature of this text is its array of hands-on, practical examples, materials, and tasks, which are presented in figures and in the main text. The synthesis of theory and research in a form that is accessible to preservice and in-service teachers enables readers to see the relevance of the field's knowledge base to their own present or future classroom settings and student writers. Each chapter includes: \*Questions for Reflection--pre-reading questions that invite readers to consider their own prior experiences as students and writers and to anticipate how these insights might inform their own teaching practice; \*Reflection and Review--follow-up questions that ask readers to examine and evaluate the theoretical information and practical suggestions provided in the main discussion; and \*Application Activities--a range of hands-on practical exercises, such as evaluating and synthesizing published research, developing lesson plans, designing classroom activities, executing classroom tasks, writing commentary on sample student papers, and assessing student writing. The dual emphasis on theory and practice makes this text appropriate as a primary or supplementary text in courses focusing on second language writing theory, as well as practicum courses that emphasize or include second language writing instruction or literacy instruction more generally. New in the Second Edition: \*updated research summaries consider new work that has appeared since publication of the first edition; \*revised chapter on research and practice in the use of computers in second language writing courses covers recent developments; \*streamlined number and type of Application Activities focus on hands-on practice exercises and critical analysis of primary research; and \*revisions throughout reflect the authors' own experiences with the text and reviewers' suggestions for improving the text.

Designed to help lexicographers compile better dictionaries of English, this book provides information about the language that is not available in any other single source. It is the first serious attempt to describe in detail the lexical and grammatical differences between American and British English and offers a trailblazing solution to the vexing problem of how to treat General American and British RP pronunciation in the same dictionary with the help of a Simplified Transcription for which any typewriter keyboard can be adapted and a pioneering description of the principles concerning the treatment of fixed grammatical and lexical collocations in future general-purpose dictionaries of English.

Attempts to stress the importance of vocabulary in linguistics. This book is a series of articles which cover much of the current research activity in the applied linguistics of vocabulary description, learning and teaching. The authors include Baita Laufer and Guust Meijers.
