"The question of how to treat commodity production and how to manage recurrent cycles of booms and busts has always been a challenge for policymakers in commodity-dependent countries, including many in the LAC region. These challenges have led to allegations of a "commodity curse" that retards development in these countries, but as of yet, there is no consensus as to whether such a curse exists, and if so, how can negative effects be minimized. This book contributes to this debate. Much of the report is focused on an examination of specific channels through which commodity dependence may affect the economic and institutional development of countries. This includes broadly 4 sets of concerns: one set dealing with the direct economic effects of commodity dependence and the implications for long-term growth; one dealing with the interactions between commodity production and the rents it generates on the one hand, and a country's institutions on the other; a third dealing with the macroeconomic challenges of managing the volatility of revenue flows, including the distributional implications at the household level posed by cyclical social spending; and a final set associated with potential negative environmental and social impacts. The book finds that some commonly accepted negative effects of dependence on natural resources are largely myths, while some are realities. But all can be managed, and the book draws on the best available information in existing literature as well as original analysis to provide practical advice on how to do so. It also presents descriptive facts and analysis of the impacts in LAC of the recent commodity boom, helping the reader understand the implications for the region's development and policies. It should be of great interest to policy-makers and analysts, as well as laypersons interested in the economics of commodity markets and their role in economic development."

When it comes to learning linear algebra, engineers trust Anton. The tenth edition presents the key concepts and topics along with engaging and contemporary applications. The chapters have been reorganized to bring up some of the more abstract topics and make the material more accessible. More theoretical exercises at all levels of difficulty are integrated throughout the pages, including true/false questions that address conceptual ideas. New marginal notes provide a fuller explanation when new methods and complex logical steps are included in proofs. Small-scale applications also show how concepts are applied to help engineers develop their mathematical reasoning.

This volume combines 10 years of accomplished research at the Pilauco site. The studies are focused on a variety of scientific areas including geological, sedimentological, geomorphological and paleobotanical topics, as well as paleontology of vertebrata and invertebrata, micropaleontology, archaeology, biochemistry, taxonomy, taphonomy, astrophysics and the development of some particular touristic aspects. In 18 chapters a variety of authors describe the excavation and investigation of this unique location. The book presents Pilauco as an example for the natural laboratory which can be found in South America, a testing ground for many of the hypotheses regarding migrations of animals and humans. In this context the study of topics, such as the paleozoography, the role of megafauna species for the architecture of the forests, the animal extinctions or the early human settlements, is extremely important on a global scale. The Pilauco site features paleontological and archaeological evidences and is contemporaneous with the Monte Verde site (~ 15,000 cal. yr AP). It is located 100 km north from Monte Verde and lies within the Intermediate Depression in northwestern Chilean Patagonia. It was discovered by chance in 1986 and has been excavated and investigated since 2007.

1984 is George Orwell's terrifying vision of a totalitarian future in which everything and everyone is slave to a tyrannical regime lead by The Party. Winston Smith works for the Ministry of Truth in London, chief city of Airstrip One. Big Brother stares out from every poster, the Thought Police uncover every act of betrayal. When Winston finds love with Julia, he discovers that life does not have to be dull and deadening, and awakens to new possibilities. Despite the police helicopters that hover and circle overhead, Winston and Julia begin to question the Party; they are drawn towards conspiracy. Yet Big Brother will not tolerate dissent - even in the mind. For those with original thoughts they invented Room 101. . .

This book presents pioneering research that is designed to show, from a qualitative and ethnographic perspective, how new information and communication technologies, as applied to the school system and to local governance initiatives, merely reproduce traditional pedagogical approaches and the dominant forms by which power is exercised at the local level. The studies thus constitute points of departure for further thinking about the need to promote an Internet culture based on the social application of a OC right to communication and culture OCO and an OC Internet right, OCO that will permit the establishment of true citizen participation and free access to knowledge, with due regard to personal and individual rights such as those of privacy and intimacy."

The book presents the National Institute of Statistics and Geography, what is and how it has developed over time, since it was founded in 1983. The Institute is today an eminently technical and at the same time autonomous body of the

Mexican State. Beyond a chronology of events, this book raises two needs that have marked the Institute's evolution: the first, to properly measure the many components of reality, whether social, economic or natural; and the second, decisive for the public's trust and whose absence would invalidate the purposes of the previous need, to preserve the information from any consideration, other than strictly professional, in all stages of its production and dissemination. This work conveys INEGI's transcendence as an indispensable institution for the country to respond to the fundamental question, common to all human beings: to know and understand the reality of their environment.

This book is open access under a CC-BY license. The multiple purposes of nature – livelihood for communities, revenues for states, commodities for companies, and biodiversity for conservationists – have turned environmental governance in Latin America into a highly contested arena. In such a resource-rich region, unequal power relations, conflicting priorities, and trade-offs among multiple goals have led to a myriad of contrasting initiatives that are reshaping social relations and rural territories. This edited collection addresses these tensions by unpacking environmental governance as a complex process of formulating and contesting values, procedures and practices shaping the access, control and use of natural resources. Contributors from various fields address the challenges, limitations, and possibilities for a more sustainable, equal, and fair development. In this book, environmental governance is seen as an overarching concept defining the dynamic and multi-layered repertoire of society-nature interactions, where images of nature and discourses on the use of natural resources are mediated by contextual processes at multiple scales.

The significance of food and feasting to Pre-Columbian Mesoamerican cultures has been extensively studied by archaeologists, anthropologists and art historians. Foodways studies have been critical to our understanding of early agriculture, political economies, and the domestication and management of plants and animals. Scholars from diverse fields have explored the symbolic complexity of food and its preparation, as well as the social importance of feasting in contemporary and historical societies. This book unites these disciplinary perspectives — from the social and biological sciences to art history and epigraphy — creating a work comprehensive in scope, which reveals our increasing understanding of the various roles of foods and cuisines in Mesoamerican cultures. The volume is organized thematically into three sections. Part 1 gives an overview of food and feasting practices as well as ancient economies in Mesoamerica. Part 2 details ethnographic, epigraphic and isotopic evidence of these practices. Finally, Part 3 presents the metaphoric value of food in Mesoamerican symbolism, ritual, and mythology. The resulting volume provides a thorough, interdisciplinary resource for understanding, food, feasting, and cultural practices in Mesoamerica.

This study focuses on the cultural-historical environment of the 88,900-acre (35,560-ha) Valles Caldera National Preserve (VCNP) over the past four centuries of Spanish, Mexican, and U.S. governance. It includes a review and synthesis of available published and unpublished historical, ethnohistorical, and ethnographic literature about the human occupation of the area now contained within the VCNP. Documents include historical maps, texts, letters, diaries, business records, photographs, land and mineral patents, and court testimony.

Research in English Language Teaching: Mexican Perspectives Teacher research takes different forms and serves a variety purposes, but it is conducted by teachers, individually or collaboratively, with the basic aim of understanding teaching and learning in context. In Mexico, teacher research is starting to gain momentum and newcomers search for guidance and examples. This book can be used by English language teachers, teacher educators and student teachers who want to develop their professional expertise by investigating learning and teaching in a systematic and organized way. It is also useful for undergraduate students of EFL teaching and applied linguistics who need to produce a thesis, or experienced teachers who want to develop a research project for the first time. Research in English Language Teaching: Mexican Perspectives combines basic general knowledge and practical advice with reports of research conducted in Mexican educational contexts. PART ONE offers an overview of research and discussion on the teaching-research nexus, and different ways to meet the challenges of doing research. PART TWO presents accounts of recent research in the national context, written by teacher researchers working for different public higher education institutions. These accounts reflect diverse theoretical approaches, topics, methods of data collection and analysis, and styles of reporting. PART THREE includes basic guidelines to write the most common research genres: thesis, conference paper, and research article. The final section contains a glossary of research terms."

SCIENCE AND EMPIRES: FROM THE INTERNATIONAL COLLOQUIUM TO THE BOOK Patrick PETITJEAN, Catherine JAMI

and Anne Marie MOULIN The International Colloquium "Science and Empires - Historical Studies about Scientific Development and European Expansion" is the product of an International Colloquium, "Sciences and Empires - A Comparative History of Scientific Exchanges: European Expansion and Scientific Development in Asian, African, American and Oceanian Countries". Organized by the REHSEIS group (Research on Epistemology and History of Exact Sciences and Scientific Institutions) of CNRS (National Center for Scientific Research), the colloquium was held from 3 to 6 April 1990 in the UNESCO building in Paris. This colloquium was an idea of Professor Roshdi Rashed who initiated this field of studies in France some years ago, and proposed "Sciences and Empires" as one of the main research programmes for the The project to organize such a colloquium was a bit REHSEIS group. of a gamble. Its subject, reflected in the title "Sciences and Empires", is not a currently-accepted sub-discipline of the history of science; rather, it refers to a set of questions which found autonomy only recently. The terminology was strongly debated by the participants and, as is frequently suggested in this book, awaits fuller clarification.

The starting point for this compilation is the wish to rethink the concept of antisemitism, race and gender in light of Sartre's pioneering *Réflexions sur la Question Juive* seventy years after its publication. The book gathers texts by prestigious scholars from different disciplines in the Humanities and the Social Sciences, with the objective of revisiting this work locating it within the setting of two other pioneering – and we argue, related – publications, namely Simone De Beauvoir's *Le deuxième sexe* of 1949 and Franz Fanon's *Peau noire et masques blancs* of 1952. This particular and original standpoint sheds new light on the different meanings and political functions of the concept of antisemitism in a political and historical context marked by the post-modern concepts of multi-ethnicity and multiculturalism.
