This basic textbook of *Community Medicine*, which includes descriptions of the related social services, is intended for a wide range of readers who require knowledge and understanding of the essential aspects of the subject. These include undergraduate medical students and qualified doctors who are engaged in postgraduate courses of study or training schemes, particularly those in community medicine and general practice. When writing this book we also had in mind the needs of students of nursing at all levels at a time when an increasing emphasis on the community is being reflected in the content of curricula and the composition of examination papers. It is our view that this account of community medicine will also be of value to established practitioners

-community physicians, community health doctors, senior nurses and health visitors - who wish to consolidate or update their knowledge. The growing involvement of the professions in the management and planning of health services means that many general practitioners, hospital doctors and nurses are being called upon to take a population perspective and to become acquainted with many of the concepts and issues discussed in this book. In addition, there are those professionals who work closely with medicine and nursing and have a common concern in providing care and promoting prevention -groups such as social workers and health education personnel. For all these reasons we would hope that many groups might read the book and find it useful.
