The life force, also known as "spirit," is the essence of being and the conscious and most important form of energy. Living energy is personal and within our conscious control, and by learning about it, we can use it to transform our life into vibrant and meaningful expressions of who we really are. Consciousness is purely energetic and therefore difficult to quantify in mechanistic terms. It is the characteristic of living energy and is the foundation of awareness. Consciousness is the thread running through all life. Living Energy is an introduction to the process of mystic spirituality. The reader is encouraged to attain a deep and meaningful

connection to the divine with expanded awareness. The principles given in this book are equally relevant to the novice and the advanced practitioner. Robert explains how we may reveal our hidden potential by shifting our perception away from what is customary and comfortable to open the doors to greater spiritual awareness.

Srimad Bhagavadgita (A Vedanta Text) Upanisads are called Vedanta and the synthesis of its concepts is discussed in 'Brahma Sutra' by the great sage Vedvyas. The knowledge of the fundamental entities, as is propounded in the Upanisads, related to the Absolute (Brahma, Pure Self) is included in Srimad Bhagavadgita (Gita), the dialogue between Lord Srikrna and the mighty-armed Arjuna. That is why the Gita Text is also called a Vedanta Text. Although from the beginning to the end in the text the Blessed Lord Srikrna has given the sermons of carrying out one's duty inspired by one's own inborn nature, but to understand the entire teachings of the Lord the study of the complete text is essential. This is a unique text of metaphysics (the science of reality) and ethics (the art of union with the reality) by which, following the scriptural method of listening, analytical reasoning and firm meditation, a person gets spiritual happiness. Many enlightened sages and learned authors have written commentaries on Gita which are very valuable from the point of view of Religion and Philosophy. In the present text, taking help of the few of these, effort is being made to present the subject matter in a different form. Based on personal experience the following five points are taken into consideration. First, a suitable title is given to each Sloka (verse) so that essentials of the subject matter are known in a short time from the contents of the text. Second, looking to the need of a large number of devotees who have no indepth knowledge of Sanskrit and its pronunciation, each Sloka is also given in the roman script. Third, the meaning of each Sanskrit word is explained in Hindi in such a way that entire meaning of the Sloka is easily understood and remembered. Fourth, keeping in view the pattern of present education and interest of young students, the meaning of each Sloka is also given in English along with Hindi. Fifth and the last point is about the short explanation of each Sloka. The thoughts of any one tradition in vogue are not fully incorporated but partly taken into consideration, which are essential to understand the in-depth meaning of the teachings and the rest is left to learned reader for his/her interpretations. It is advised to study the known standard texts for detailed explanations.

This textbook presents a survey of physical anthropology, the branch of anthropology that studies the physical development of the human species. It plays an important part in the study of human origins and in the analysis and identification of human remains for legal purposes. The authors use the progressive term

"biological anthropology" to mean "an integrative combination of information from the fossil record and the human skeleton, genetics of individuals and of populations, our primate relatives, human adaptation, and human behavior."

The tension between theology and science regarding human nature has concerned theologians for centuries. This tension is founded upon the conflict between Hellenic dualist and Semitic 'seemingly' monist models of theological outlooks that have influenced faith and science throughout human history. However, such conflict belies a hidden undercurrent that connects both viewpoints. A discussion of theology which does not think in radical Christological terms could easily identify Gregory of Nyssa as a dualist and Ephrem the Syrian as a monist. A careful examination and synthesis, however, of their interpretations of Genesis 3:21 proves that Christianity is not so limited as to fail to provide an answer to the age old inquiry regarding the nature of humanity in a unitary Christocentric model. While the role of Christian theology is to answer the 'why' and not the 'how', in addition to addressing the 'why', this book also proposes a novel way for science to think about the 'how'. The analysis of the theological works of these two ancient Christian authors regarding creation, the image and likeness, the fall, the 'garments of skin' and the incarnation of the Word will show that in Christ, humanity is not only returning to a protological point but also being invited to fulfill its teleological invitation to partake of divine nature.

The Third Edition of this best-selling text now includes an update to the evolutionary primate taxonomy and even more tools to help students grasp the major concepts in physical anthropology—including new, photorealistic art.

This full color lab manual is intended to be used primarily as a text for an introductory laboratory course in physical anthropology but also can serve as a supplementary text or workbook for a lecture class, particularly in the absence of a laboratory offering. Because it provides numerous photos and illustrations, it can be used with a minimum of laboratory materials. This lab manual enables a hands-on approach to learning about the evolutionary processes that resulted in humans through the use of numerous examples and exercises. It offers solid grounding in the main areas of an introductory physical anthropology lab course: genetics, evolutionary forces, human osteology, forensic anthropology, comparative/functional skeletal anatomy, primate behavior, paleoanthropology, and now, in this new edition, modern human biological variation and fossil dating techniques have been added.
